

Skeptical of ERS projections

It doesn't take long after talking to me to realize that I am against Eagle River Station 2.0. However, I do not ask for people to be against the project but instead; learn the facts.

The developer has been spending money on radio and print ads for some time touting big numbers and big promises. But please check out www.yestoeagle.com. We are happy to send along backup for any of the information or statements presented and you can decide for yourself what makes sense for our community.

Unfortunately, the staff presented no projections on the best-, middle- and worse-case scenarios on the financials. This is despite having an email from Jeff Conk, Financial Director of Sparks Nevada, stating the Red Development's project there did "something way below even the lowest projections" after they did the best-, middle- and worse-case scenarios.

I am hoping the Trustees are asking few questions because they realize this project is not right for Eagle for many reasons and because the math does not work. And I am confident that the voters of Eagle will vote no again (if the Trustees vote yes) on this project like the majority did just over two years ago in January 2010.

No to ERS.

Yes to Eagle.
