

AGENDA
Planning & Zoning Commission
Tuesday, June 21, 2016
6:00 P.M.

Public Meeting Room / Eagle Town Hall
200 Broadway
Eagle, CO

This agenda and the meetings can be viewed at www.townofeagle.org.

ITEM		
6:00pm – CALL TO ORDER		
APPROVAL OF MINUTES – June 7, 2016		
<u>PUBLIC COMMENT</u>		
<i>Citizens are invited to comment on any item not on the Agenda subject to a public hearing. Please limit your comments to five (5) minutes per person.</i>		
<u>PRESENTATIONS</u>		
1. Eagle County – West Eagle Plan		
<u>LAND USE FILES</u>		
<u>NEW PUBLIC HEARINGS</u>		
1.	Project:	Sylvan Circle Development Plan
	File #:	DR16-03
	Applicant:	Jonathon Werner (Eagle Sylvan, LLC)
	Location:	58 Sylvan Lake Road
	Staff Contact:	Tom Boni (Town Planner)
	Request:	Development Review for a 42-unit townhome project on 4.67 acres.
2.	Project:	Aguilar Setback Variance
	File #:	V16-03
	Applicant:	Cynthia Aguilar
	Location:	20 Wren Court
	Staff Contact:	Tom Boni (Town Planner)
	Request:	Reduce side yard setback requirement to allow for the construction of a covered deck.

ITEM

TOWN BOARD OF TRUSTEES MEETING REVIEW

Staff update to the Planning & Zoning Commission on recent decisions made by the Board of Trustees on various Land Use files.

1. Colorado Slab & Tile – Special Use Permit
2. Rocky Mtn Discovery School – Special Use Permit

This meeting was recorded and the CD will become part of the permanent record of the minutes. The following is a condensed version of the proceedings written by Carla Nelson.

CALL TO ORDER

The regular meeting of the Planning and Zoning Commission held in the Eagle Town Hall on June 7, 2016 was called to order by Jason Cowles at 6:03 p.m.

APPROVAL OF MINUTES

Spinelli made a motion to approve the minutes of the May 17, 2016, Planning and Zoning Commission Meeting. Gregg seconded. The motion passed unanimously.

PUBLIC COMMENT

None

WELCOME

Welcome to Danielle Couch, Administrative Assistant to the Planning Department.

LAND USE PUBLIC HEARINGS

SU16-01 Rocky Mountain School of Discovery

Cowles opened File SU16-01, Rocky Mountain School of Discovery, a request for a special use permit to allow for a pre-

school to serve up to a maximum of 40 children on a +/- one acre parcel of land zoned Rural Residential, located at 409 Brooks Lane.

Boni presented the location of the existing buildings. The Standards for a Special Use Permits were reviewed, as well as possible street and railroad crossing improvements if there is a significant increase in traffic.

The applicant Anne Helene Garberg, further explained her application for a pre-school. The town and the county are in need of pre-schools. Recently, she had taken over Sunshine Mountain Preschool. She teaches by connecting children to nature, using gardens, and greenhouses. Ms. Garberg has offered alternatives to having children dropped-off or picked-up, as a way of minimizing traffic impact, suggested that the parents walk their children across the foot bridge connecting Brooks Lane to the Eagle County Fairgrounds, or shuttle students to Brooks Lane.

Boni noted written comment was submitted by Dana Stiles. Cowles opened public comment and the following citizens addressed the Commission:

1. Ron Bates, 450 Brooks Lane-representing John Hardesty, Dana Stiles and Freddie Modders. Mr. Bates was concerned with narrow lane width, railroad crossing, and inadequate parking. He stated concern with remodeling the home that contained asbestos and lead paint. The quality of life for existing Brooks Lane residents may be highly impacted.
2. Kim Anderson, 206 Haystacker-Ms. Anderson has had previous experience with Ms. Garberg's facilities. She believes in Ms. Garberg's teaching philosophy. She is not opposed to walking her child across the pedestrian bridge instead of driving to the school.
3. Brian Rooney, 120 Howard Street-Mr. Rooney currently drives out of town for his children to attend Ms. Garberg's facility. He notes the need for more childcare in Eagle and throughout the valley.
4. Cynthia Lepthein-409 Brooks Lane. Ms. Lepthein agreed there is a need for childcare, likes the idea of the pre-school, but is concerned about the safety of the students and other children in the area due to increased traffic and the crossing of the railroad tracks.

5. Kelly Anderson--purchasing 409 Brooks Lane. Mr. Anderson is Anne Helene's husband. He has already taken steps to remodel the house, including the asbestos abatement.
6. Public comment--Parent that walks whenever possible to bring her child to school. She is concerned about viability of society.
7. Jenna Castillo--Ms. Castillo has concerns about the bus stop on Highway 6 and the safety of the children due to increased traffic.
8. Kristen Olesen.--Ms Olesen stated the need for more childcare or pre-schools in Eagle.
9. Maria Rodriguez.--Ms. Rodriguez thought that having more childcare a great idea but is concerned that traffic will be an issue.
10. Karen Harkins--Ms. Harkins believes that the children can learn great things at this pre-school but traffic in the community needs assistance.
11. Lucia Rodriguez--Ms. Rodriguez believes that daycare is a great idea, but traffic in the area is already an issue.
12. Mina Chavez--Ms. Chavez feels that children should not wait for the bus alone due to existing traffic concerns.

Cowles closed public comment. The Commission deliberated on the maximum number of children that would attend the pre-school; the minimum number of children required to allow the pre-school to break even financially; getting approval from the Public Utilities Commission (PUC) to make improvements; and traffic mitigation.

Cowles made a motion to recommend approval of File SU16-01, Rocky Mountain School of Discovery with the following conditions:

1. The applicant will negotiate access improvements with the Town of Eagle at the Brooks Lane/Highway 6 intersection. Conceptually to include lane widening and pedestrian access to the school bus stop.

2. Approval of access from the Public Utilities Commission (PUC).
3. The applicant will submit a drop-off and pick-up management plan.
4. A traffic impact report.
5. Number of students be limited to 30.

Callicrate seconded the motion. The motion passed unanimously.

Cowles stated this file will go before the Town Board of Trustees at the next scheduled meeting to be held on June 14, 2016.

BREAK 8:07pm – 8:15pm

SU16-02 Colorado Slab and Tile – Outside Storage

V16-02 Colorado Slab and Tile – Fence in Front Yard

Cowles opened Files SU16-02 and V16-02, Colorado Slab and Tile, a special use permit to allow for outside storage and a variance to allow the installation of a 6' tall fence in the front yard, located at 12 Eagle Park East. This property is zoned Commercial General (CG) and the building is primarily office space.

The applicant, Jason Kaples, owner of Colorado Slab and Tile, described the business and the proposed use of the lot for displaying their stone slabs. Mr. Kaples purchased chain-link fence to be installed around the perimeter of the lot allowing the stone slabs to be visible from Chambers Avenue, while keeping non-customers out of the on-site storage areas.

Cowles opened public comment and receiving none, closed public comment. The Commission deliberated agreeing that outside storage should be allowed and offered several alternative locations for the fence.

Richards made a motion to approve File V16-02, Colorado Slab and Tile, to allow for a 6' fence in the front yard, as it complies with standards 1, 2 and 3 of the Land Use and Development Code, to be located as shown by the applicant and to have a 45 degree corner at the corner of Eagle Park East and Chambers Avenue. Gregg seconded the motion. The motion passed with a vote of 5 to 1, with Spinelli voting nay.

Richards made a motion to approve File SU16-02, Colorado Slab and Tile as it complies with standards 1, 2 and 3 of the Land Use and Development Code, with the following conditions:

1. The chain-link fence should be coated with either black or green epoxy paint.
2. A setback of 2' at the front property lines to allow for landscaping.
3. The applicant will work with town Staff to landscape along fence perimeter inside and outside.

Callicrate seconded. The motion passed with a vote of 5 to 1, with Spinelli voting nay.

Cowles closed Files SU16-02 and V16-02.

SU97 (Amended 2016) Boyz Toyz Snowmobile/ATV Store

Cowles opened File SU97, Boyz Toyz Snowmobile/ATV Store, a request to allow continued operation of store/repair facility, located at 432 Grand Avenue in the Commercial Limited (CL) zoned area. Richards recused himself as he represented the applicant on original application.

Cowles opened public comment and receiving none, closed public comment. Boni presented the location of the store, the location of the vehicles for sale, and the store/repair facility.

Greg made a motion to approve File SU97, Boyz Toyz Snowmobile/ATV Store, an amendment to the special use permit with the following amendments:

1. Remove item #2, Allow temporary storage of vehicles on the east side of the building.
2. Remove item #5, Allow up to 30 vehicles for display on private property.
3. Remove item #6, the loading area will now be on McIntire.
4. Remove item #14, amend to allow shed with Town of Eagle compliance
5. Add, Existing fence should be replaced to property line.

Perkins seconded the motion. The motion passed unanimously.

Cowles closed File SU97 (Amendment 2016).

LURA16-01, Revisions to Land Use and Development Code Section 4.03.040

Cowles made a motion to continue File LURA16-01 to the Planning and Zoning meeting on July 19, 2016. Spinelli seconded. The motion passed unanimously.

ADJOURN

Spinelli made a motion to adjourn the meeting. Perkins seconded. The motion passed unanimously. The meeting was adjourned at 9:54 p.m.

EAGLE COUNTY

West Eagle Site Planning

View of Horse Pasture looking north to Castle Peak

View of Horse Pasture looking southeast to Sawatch Mountains

PROJECT TEAM:

Eagle County Housing and Development Authority & Facilities Management

- Jill Klostermann
- Tori Franks
- Jan Miller
- Ron Seibert
- Cleat Saunier

Zehren and Associates

- Pedro Campos, Principal / Land Planner
- Melissa Brandrup, Senior Architect
- Jesse Gregg, Land Planner
- Josh Rubin, Intern Architect

Alpine Engineering

- Gary Brooks, Principal / Professional Engineer
- Matt Wadey, Principal / Professional Engineer

Town of Eagle

- Tom Boni, Town Planner
- Kevin Sharkey, Town Engineer
- Matt Farrar, Assistant Town Planner

“West Eagle Site Planning”

PROJECT GOALS:

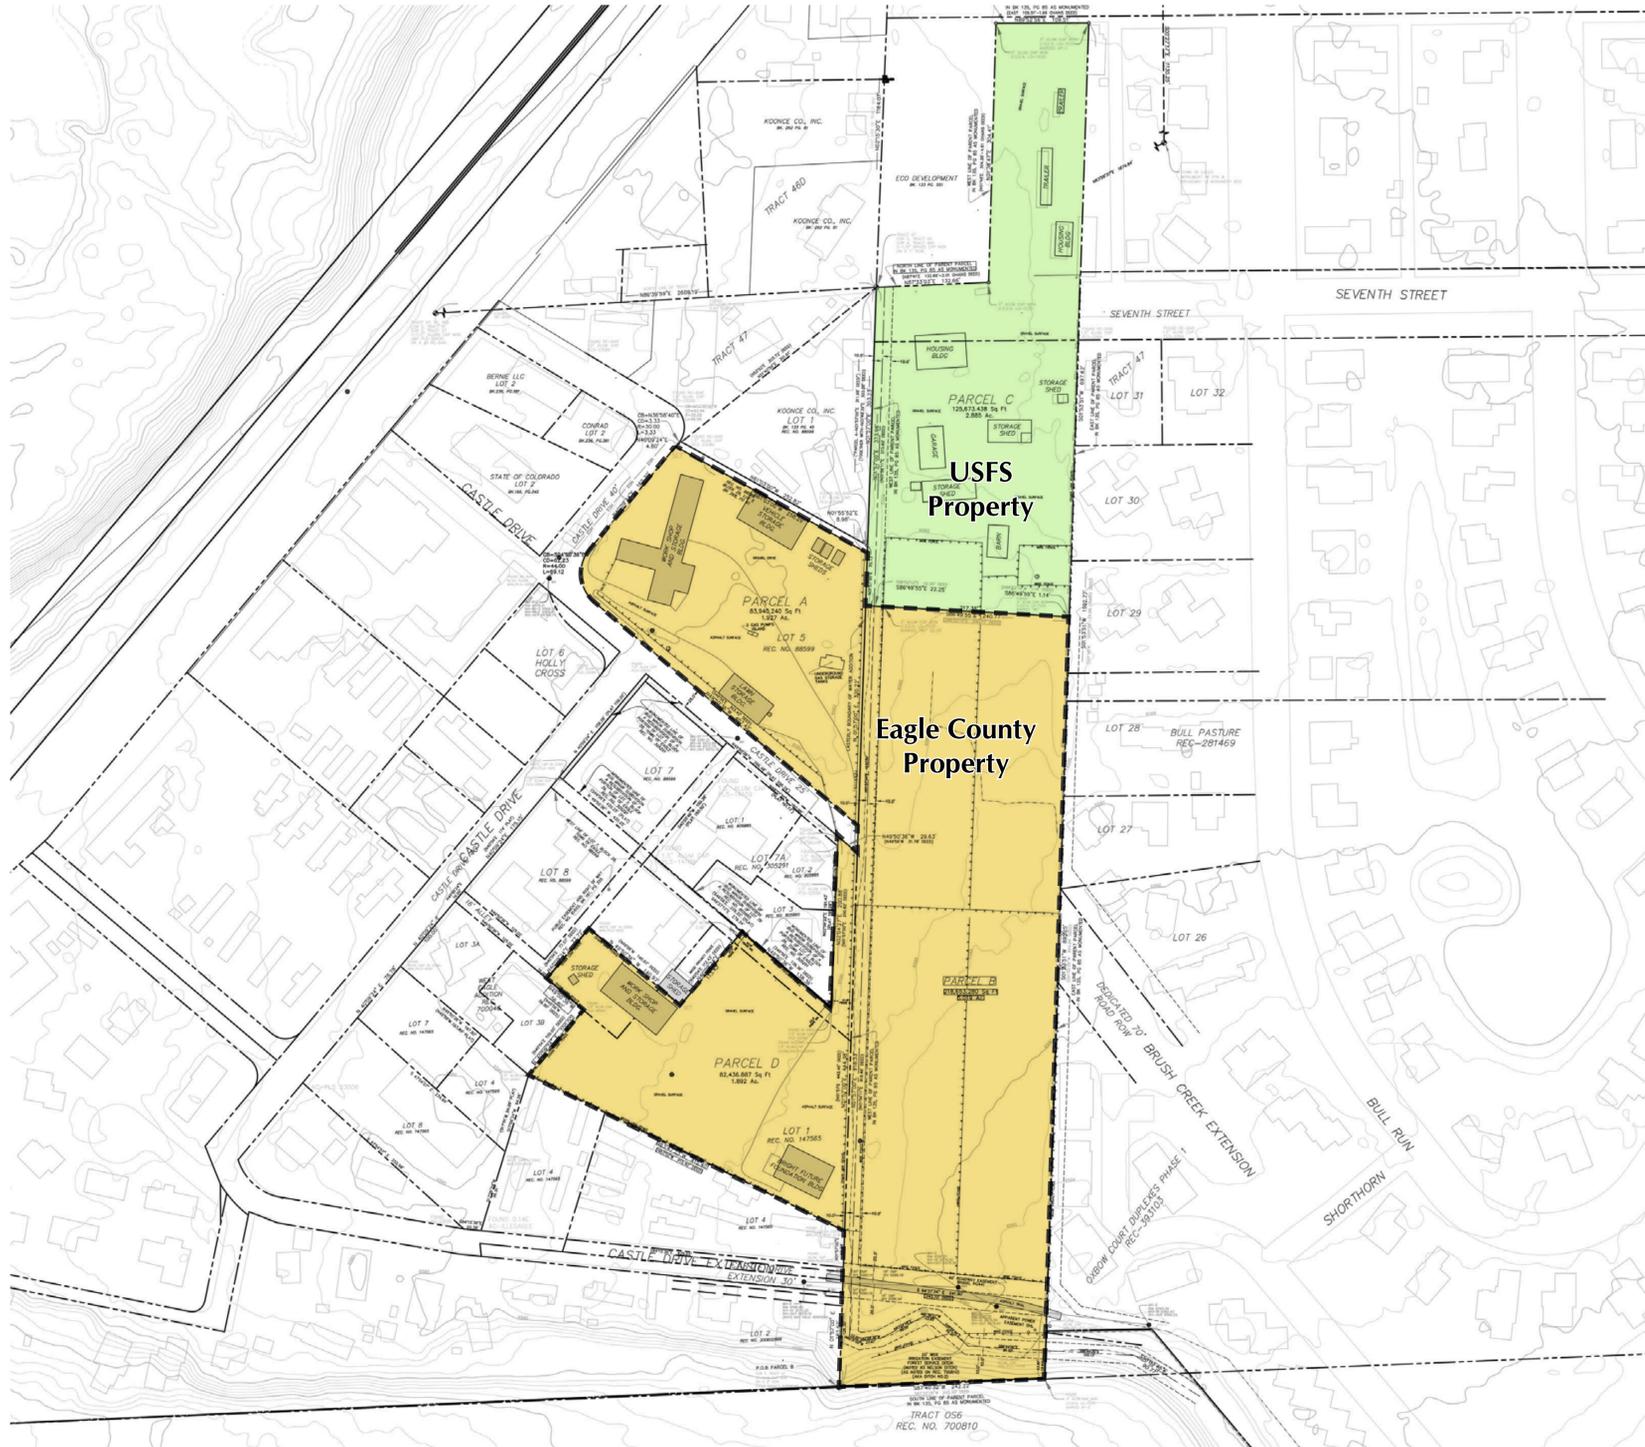

- 1) Develop a concept plan with appropriate density and scale for infill neighborhood.
- 2) Establish circulation framework for County-owned parcels consistent with Town of Eagle West Eagle Planning District.
- 3) Establish a cohesive pedestrian circulation system with strong connectivity to the existing neighborhoods, trails and paths.
- 4) Identify utility and infrastructure improvements, and upgrades necessary to support development.
- 5) Identify necessary right-of-way acquisition and easements required for access and circulation.
- 6) Involve Town of Eagle in the planning process and respond to current plans within the District.
- 7) Integrate a variety of housing prototypes and unit types based on trends in market demand and housing needs.
- 8) Create visualization and graphic communication tools to help convey vision, layout, size and scale, and overall character of proposed development.

SITE CONTEXT:

- 8.84 acres owned by Eagle County located in the West Eagle Planning District, within the Town of Eagle municipal boundary.
- Highway 6 “Grand Avenue” on the western edge of the district.
- Eagle Ranch wetlands and open space on the southern edge of the County owned parcel.
- Eagle River Corridor / Eagle River Park Planning Area to the north, across Highway 6.
- Site is adjacent to and in walking distance to the historic ‘old town’ and grid development pattern.
- Trail connection at south end of parcel.
- USFS adjacency to the north.
- Brush Creek Road Extension planned through parcel and district as major collector for Town of Eagle.

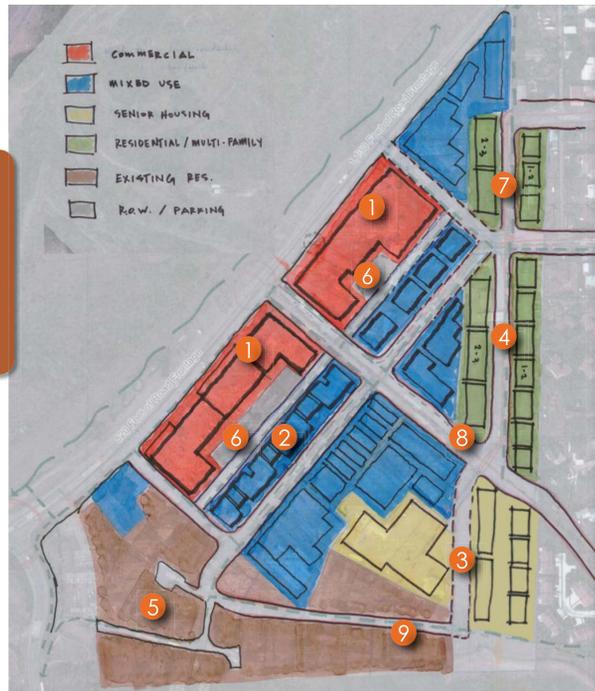

EXISTING CONDITIONS:

- Horse pasture - large rectangle historically used for livestock grazing (USFS), fenced.
- County Facilities Management uses - storage, gas pump and workshops.
- Single Family, duplex, and multi-family residential surrounding land uses, one to two-story (no three story structures).
- Live flowing ditches through the the property, with water rights that need to be maintained and conveyed.
- Private structures observed within designated public right-of-ways.
- Proximity to established ' Bull Pasture' and 'West Eagle' residential neighborhoods.
- Brush Creek Extension right-of-way already identified and exists to the south of downtown.

1. Commercial Use
2. Mixed Use
3. Senior Housing
4. Residential / Multi-family
5. Existing Residential
6. Shared Parking behind buildings
7. Connectivity with 6th and 7th Streets into original grid
8. Near 90-degree intersection
9. Connectivity to Prince Alley

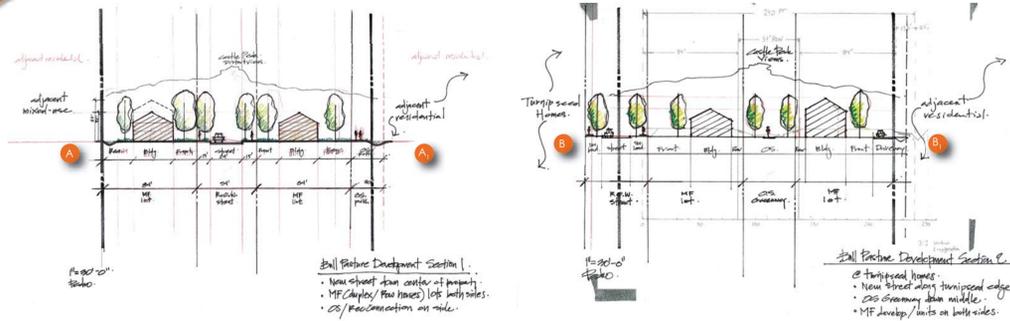

14

WEST EAGLE SUB AREA PLAN

- Existing Town long range plan that identifies general land-uses and circulation within West Eagle.
- Plan prepared at the time Continuum of Care Retirement Community (CCRC) was identified for County Parcel.
- Plan in need of amendment to respond to current day conditions, new proposals from land owners including Eagle County, Koonce, and others.
- Current County West Eagle planning effort has laid the ground work for the Town of Eagle to amend the plan as a direct next step to enable development of infill parcels.

Cross Sections Residential

Conceptual elevations of buildings, sidewalks, roads, etc.

- Residential:**
- Residential use on County property is contemplated to be a combination of senior care, workforce, and market rate housing
 - Buildings could either be two or three story but must integrate architecturally with the surrounding neighborhoods
 - New amenities should be added to the area such as pocket parks and good pedestrian connections
 - Residential planning needs to allow for the phasing of units to meet market demand and not oversupply the community
 - All new residential units must be built with sustainable building practices

16

WEST EAGLE SUB AREA PLAN FUTURE LAND USE MAP

FUTURE LAND USE MAP DESIGNATIONS

Figure 19: Land Use Map Designations

VI. FUTURE LAND USE MAP/ CIRCULATION PLAN

The Future Land Use Map map shows the general distribution of land uses recommended by this plan. Note that these are future land use planning designations and proposed road and pedestrian connections rather than Official Zone Districts and Street Map. Please consult the Town of Eagle Zoning Map for the current zone district designations and street map. Any significant redevelopment of property within the West Eagle Neighborhood is encouraged to use the Planned Unit Development Zone District. This provides flexibility to accommodate a mixture of uses, increased density, flexibility in site design and opportunity for the Town and applicant to agree on a more specific development approval that is beneficial to both applicant/developer and the Town.

See 11x17 Future Land Use Map Designations insert in back.

17

DEVELOPMENT SUMMARY:

(24) Stacked Flats
 (27) Townhomes
 16 Small Bungalows
 (11) Single Family Lots
 78 Dwelling Units Total

Total Area: 8.84 acres
 Density: 8.24 d.u. / acre

DEVELOPMENT SUMMARY:

-  (24) Stacked Flats
-  (27) Townhomes
-  (16) Small Bungalows
-  (11) Single Family Lots

- 78 Dwelling Units Total

- Total Area: 8.84 acres
- Density: 8.8 d.u. / acre

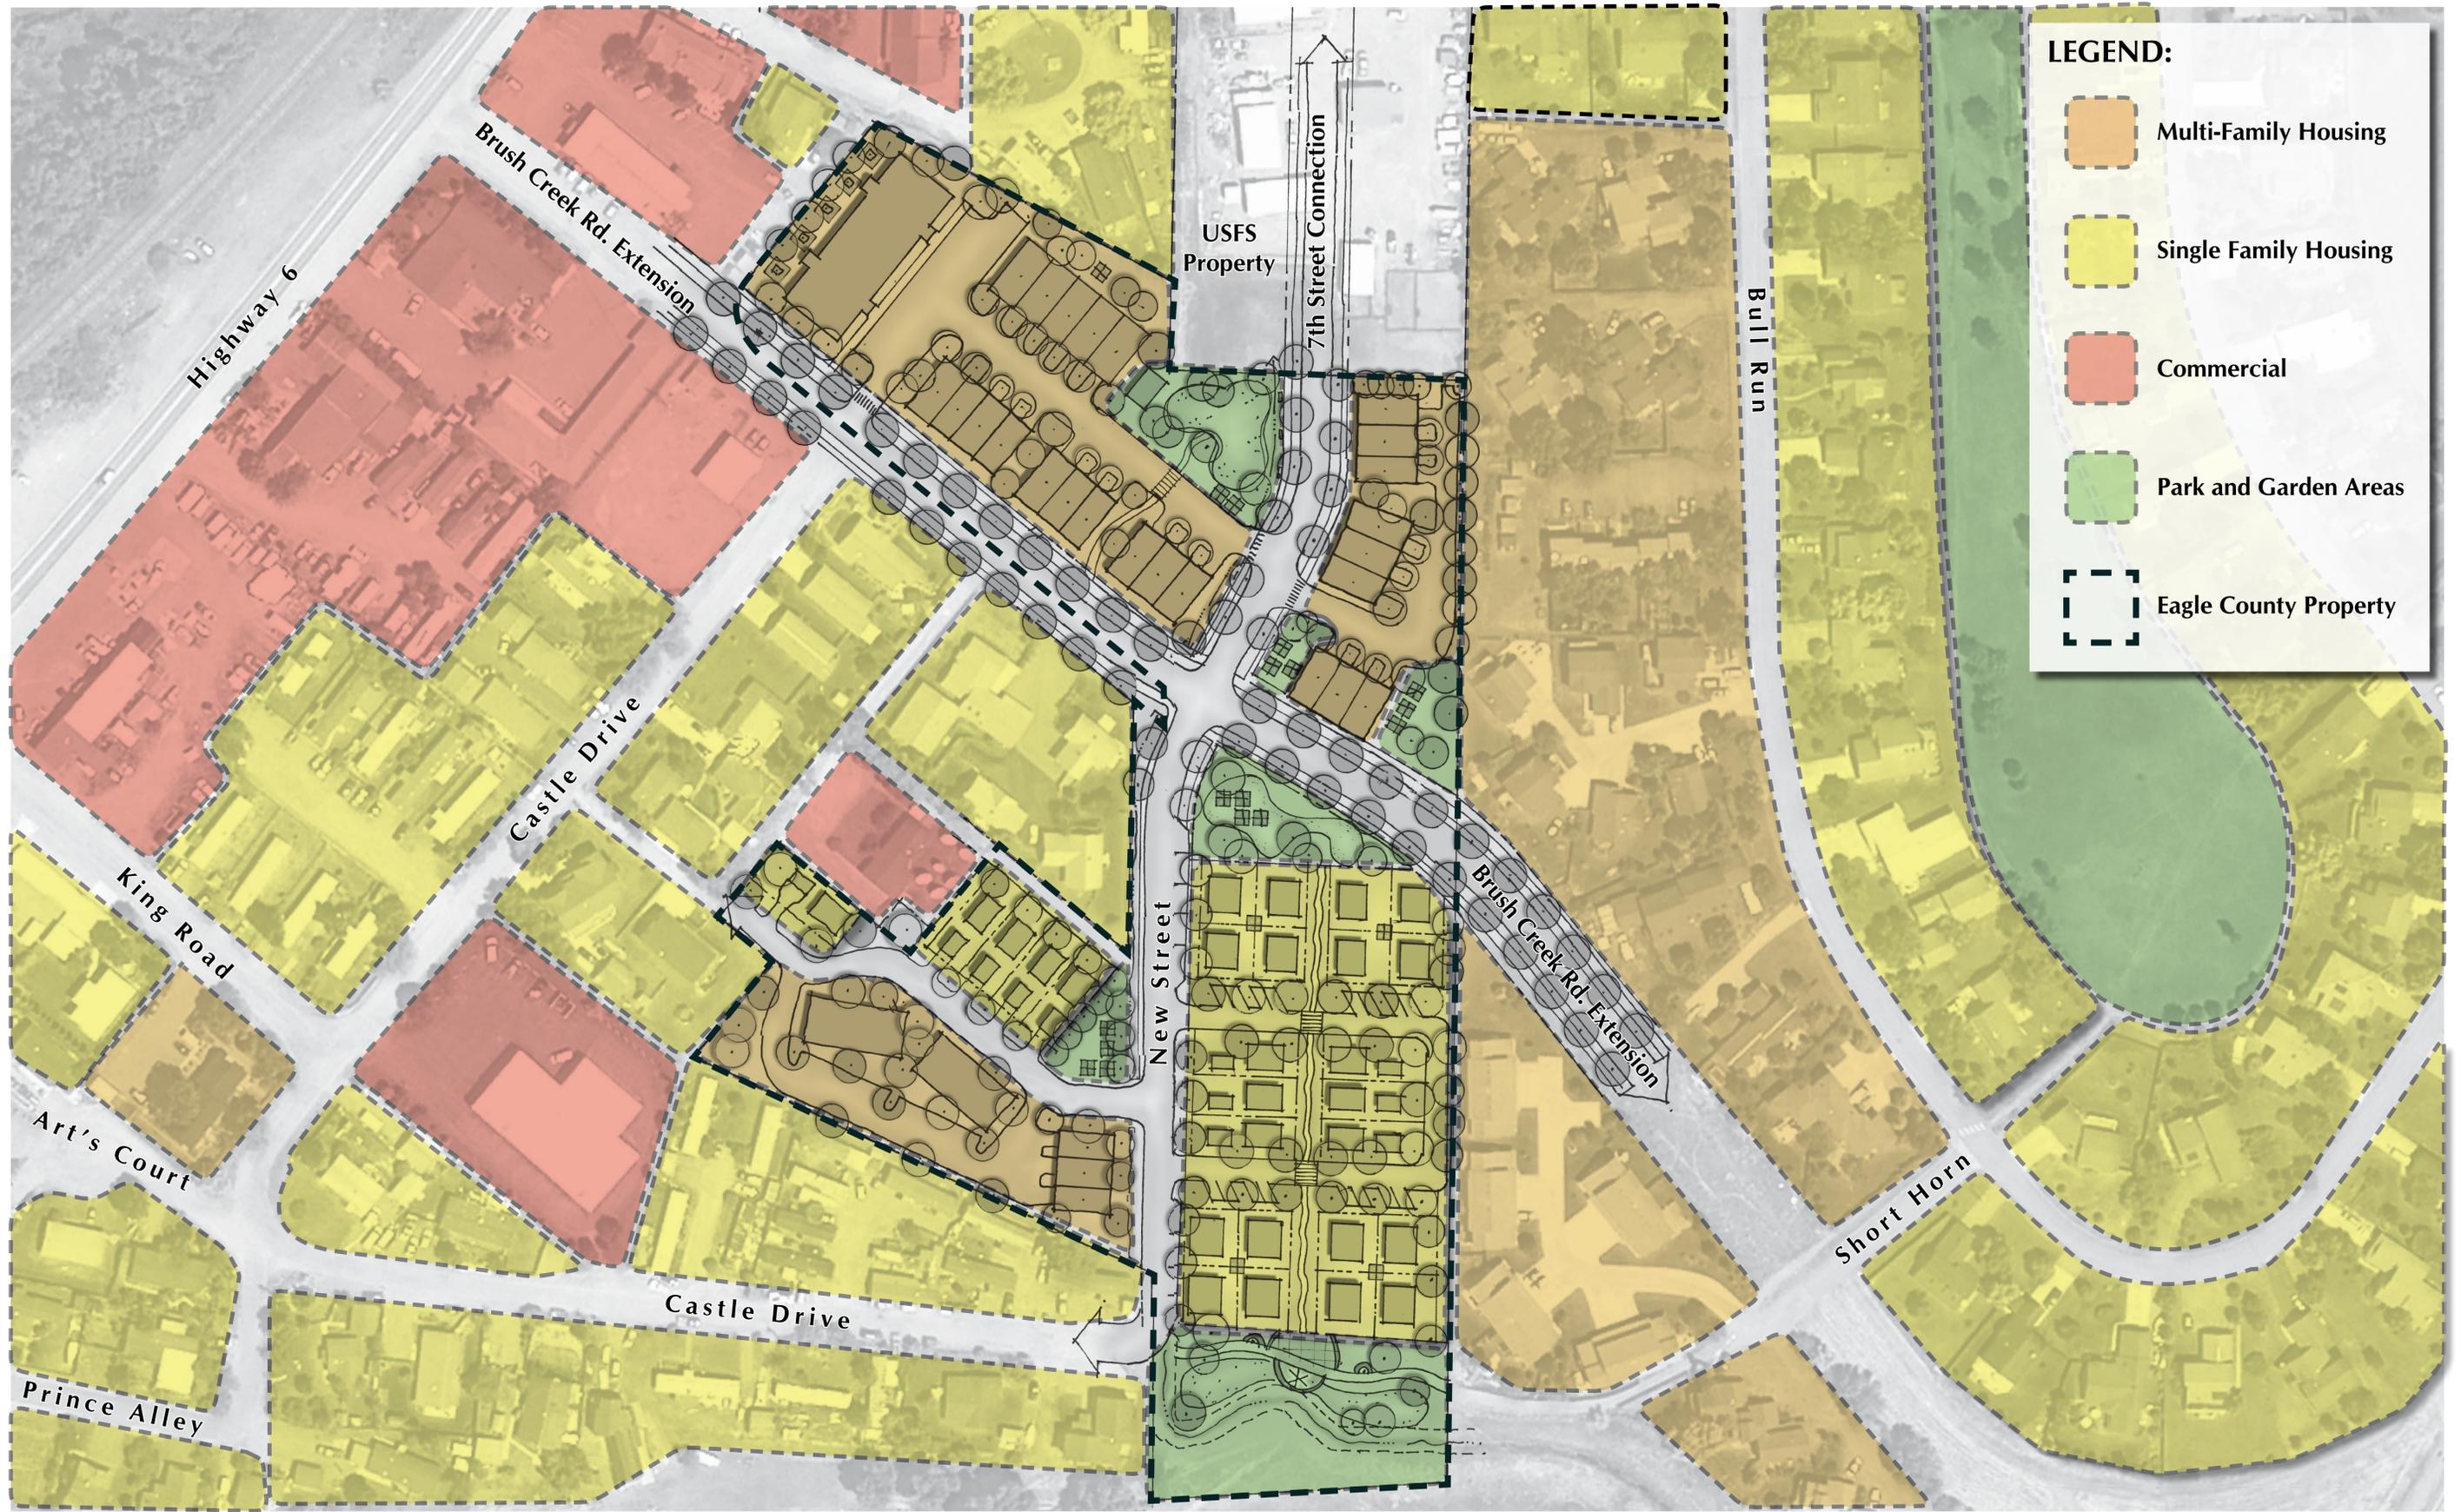

-  Parks, Gardens, and Open Space
1.7 Acres (approx 19% of total area)

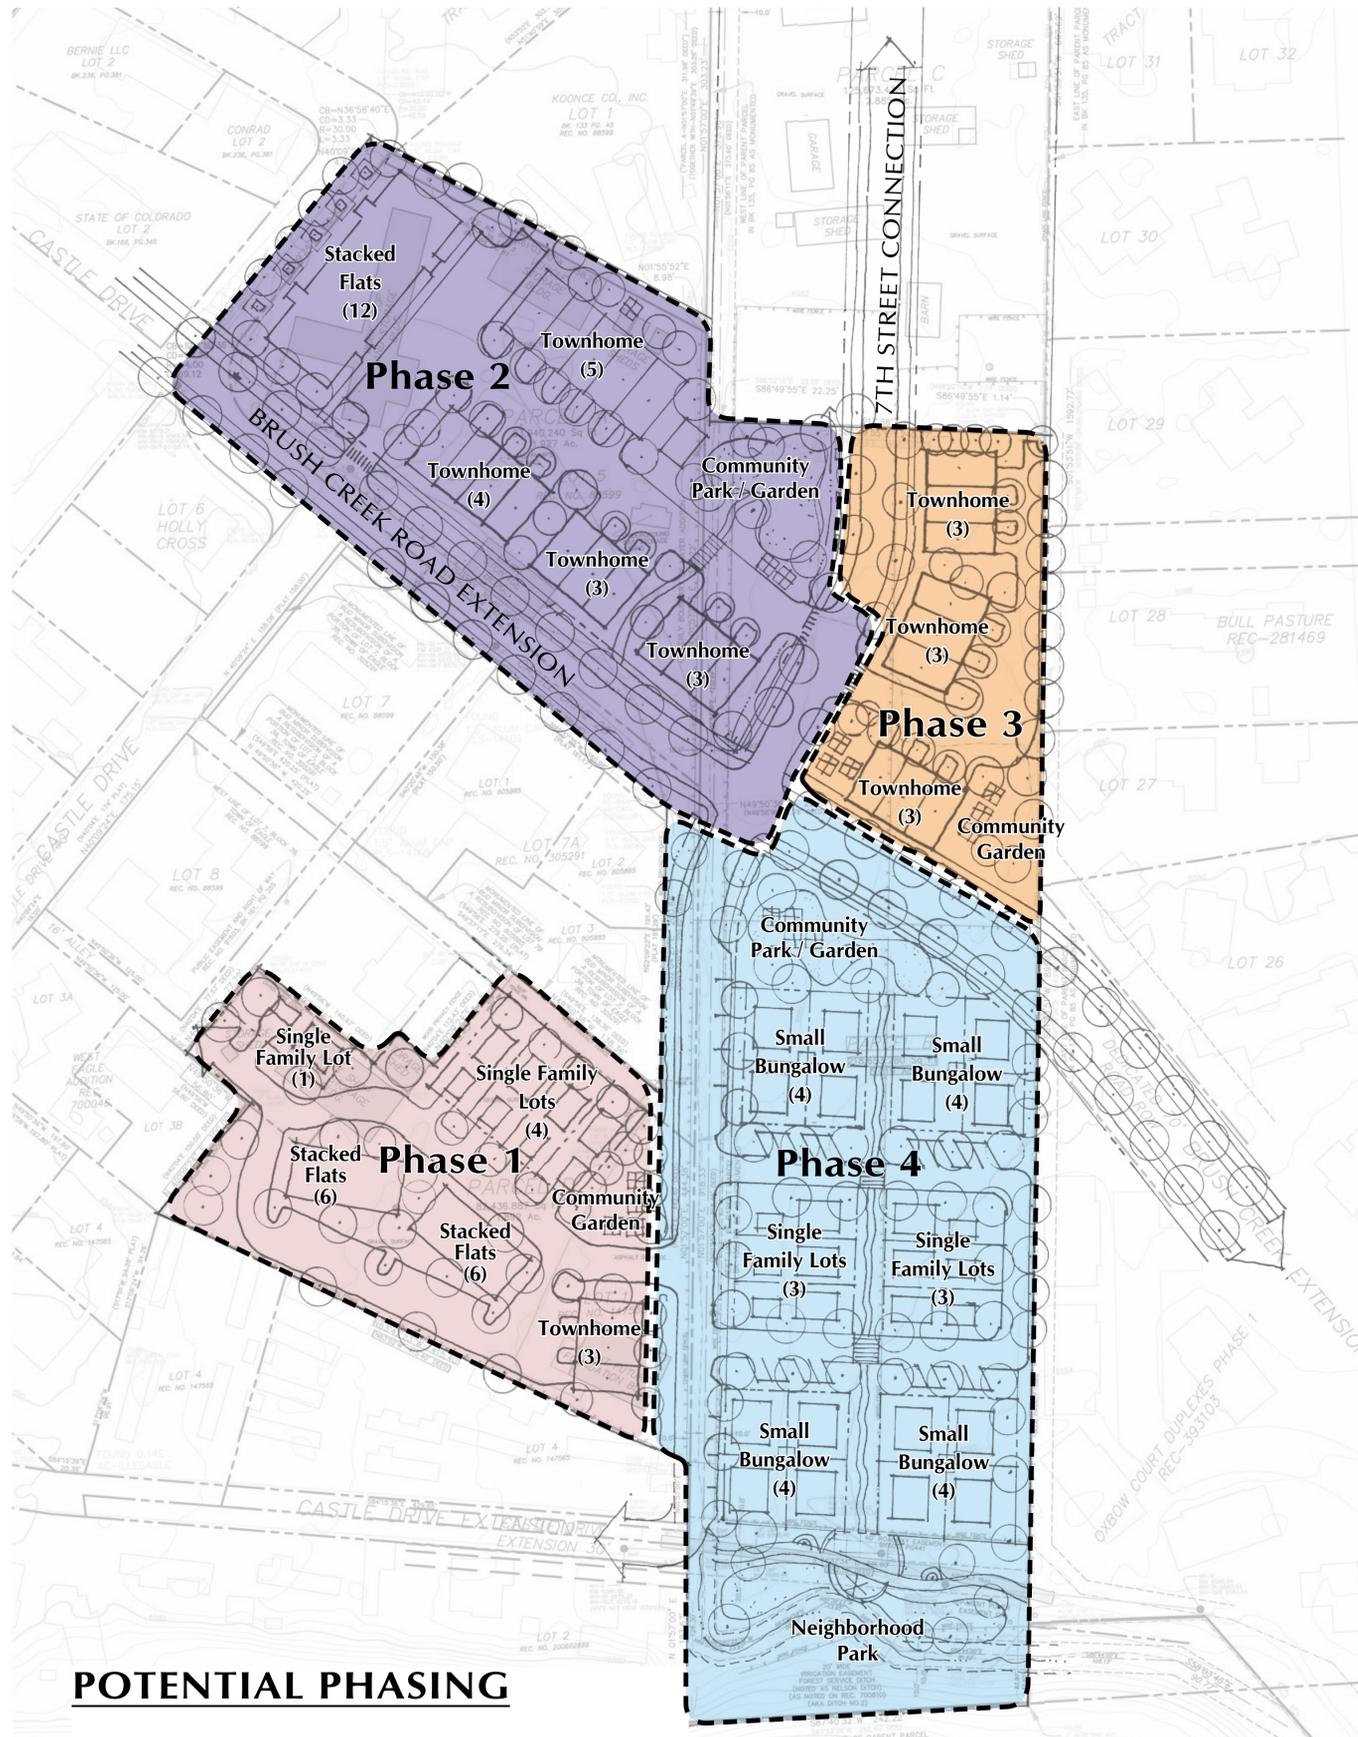

LEGEND:

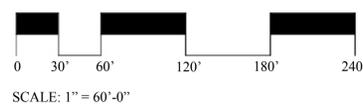

- Vehicular Circulation
- Emergency Vehicle Access Only
- Primary Pedestrian Route
- Views to Surrounding Mountains
- Activity Node
- Vehicular and Pedestrian Gateway
- Park and Garden Areas

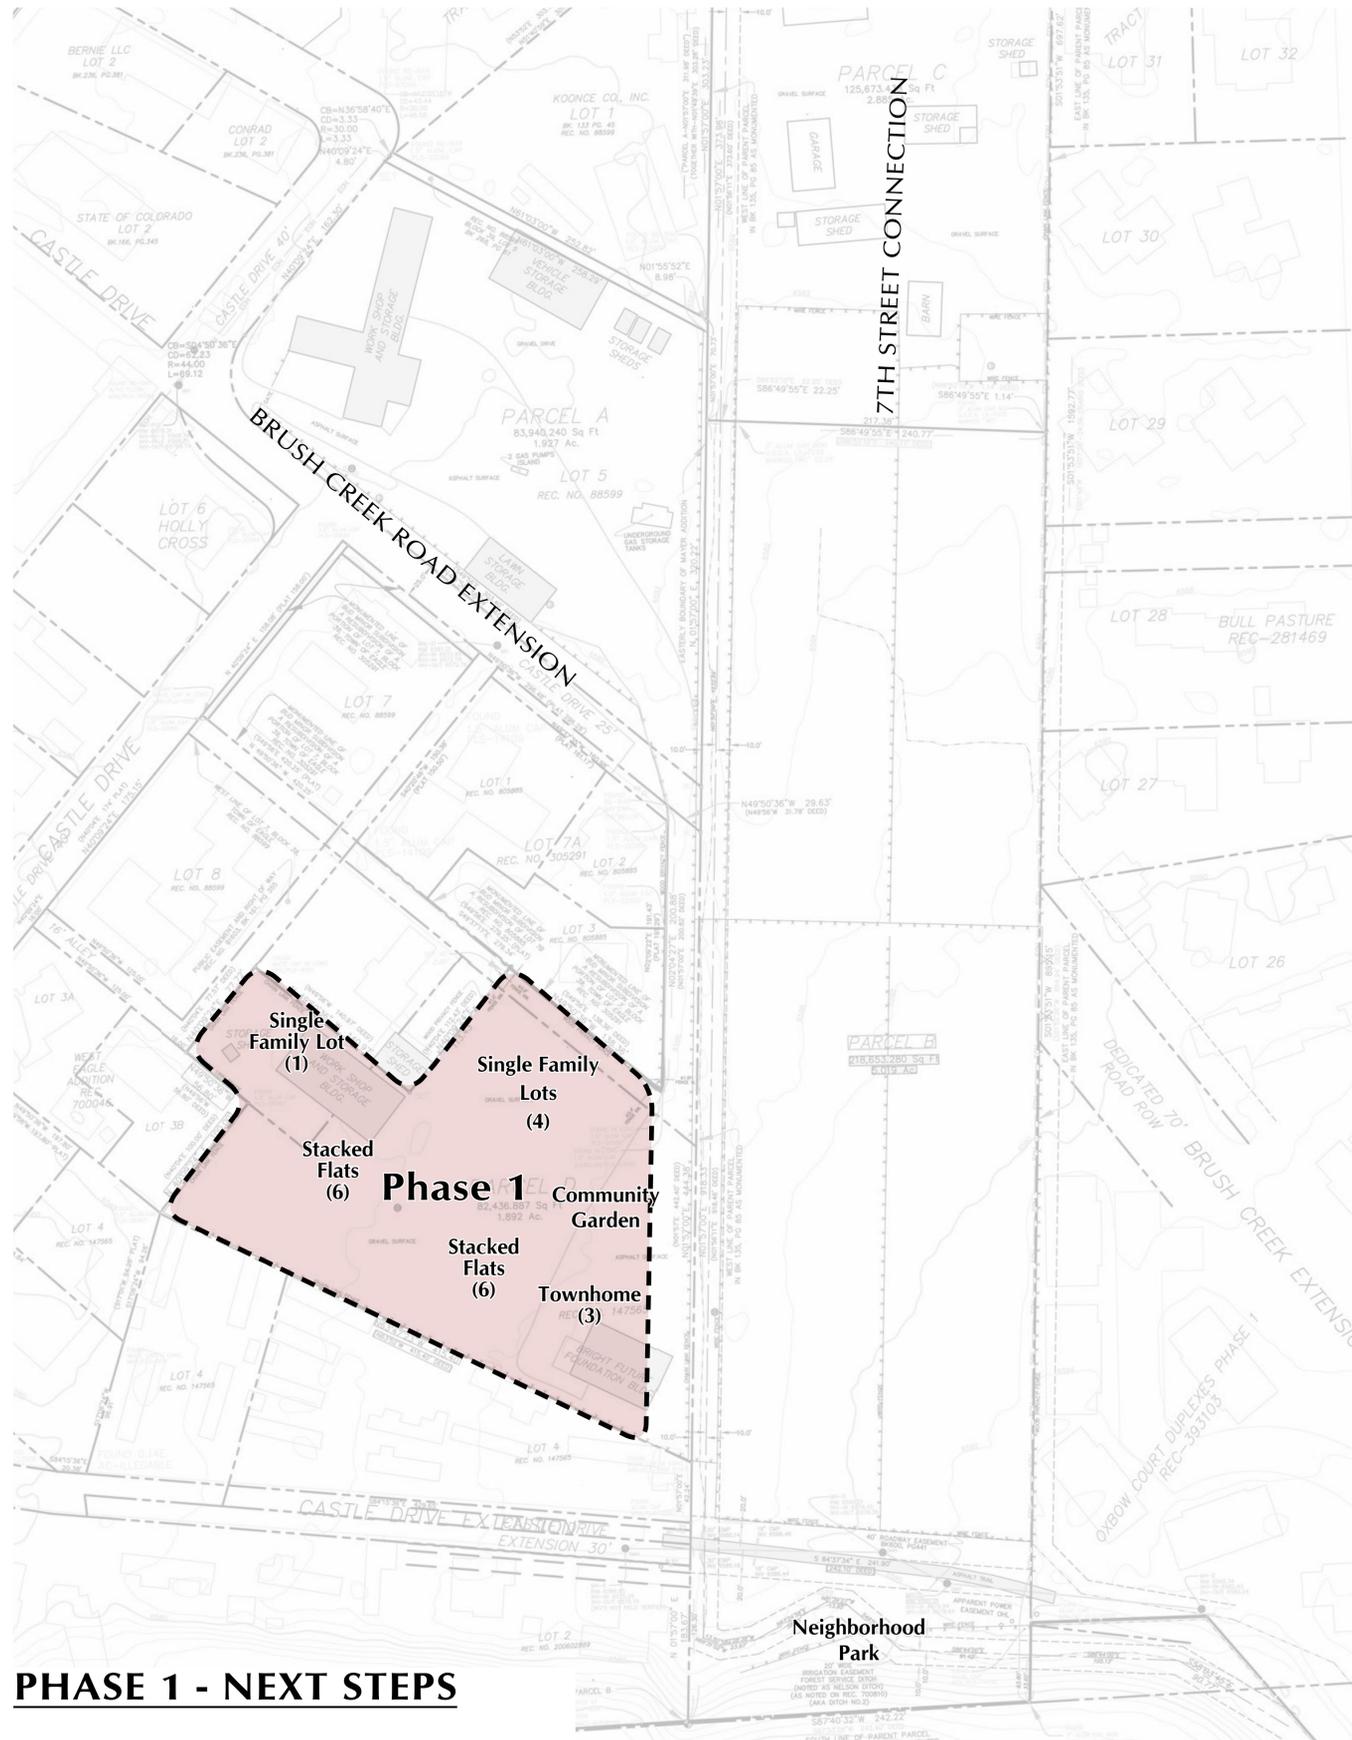

POTENTIAL PHASING

PHASE 1 - NEXT STEPS

NEXT STEPS REQUIRED TOWARD A PHASE ONE

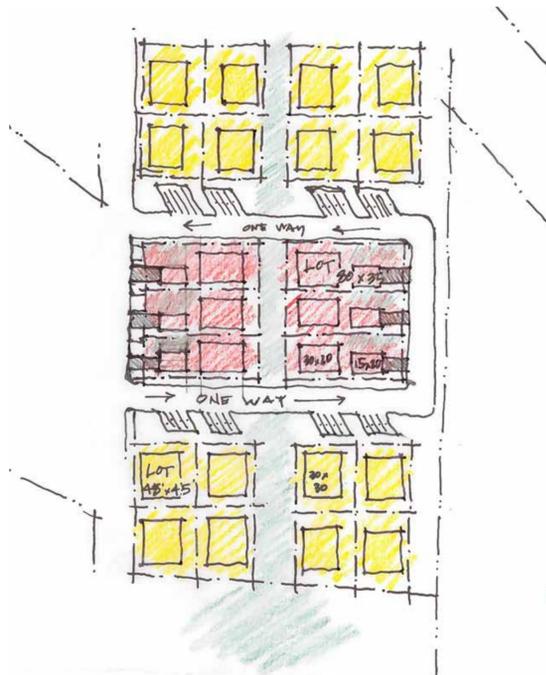

- 1) Monument Boundary Survey to identify easements, conflicts, overlaps.
- 2) Soils Report to inform road design and development.
- 3) Irrigation Ditch piping and routing, and conveyance of down stream water rights.
- 4) Existing Sewer System investigation and preliminary design.
- 5) Stormwater and Drainage report and analysis, and preliminary design.
- 6) Site Access study and traffic analysis. Traffic Impact Report and preliminary design of roadways, sidewalks, trails and major intersections.
- 7) Upgrades to Site Utilities - water system, sanitary sewer system, electrical, gas, phone and cable.
- 8) Preliminary Level of Design required to fully understand costs and complexity of project.
- 9) Next procedural step would be preparation of Sketch Plan submittal per Town of Eagle requirements, possibly concurrent with amendment to West Eagle SubArea Plan amendment.

CERTIFICATE OF RECOMMENDATION

TO: Planning and Zoning Commission

FROM: Department of Community Development

DATE: Tuesday, June 21, 2015

PROJECT NAME: Sylvan Circle Major Development Permit

FILE NUMBER: DR16-03

APPLICANT: Jonathan Warner

STAFF CONTACT: Tom Boni, Town Planner

APPLICABLE SECTION(S) OF MUNICIPAL CODE:

Section 4.06 (Development Review)
Section 4.07 (Development Standards)

EXHIBIT

- A. Aerial Photo
- B. Sylvan Lake Roundabout PUD Guide
- C. Final Plat
- D. Application Packet

PUBLIC COMMENT: None received to date

REQUEST:

The applicant is requesting Development Plan review of a multi-family development containing 42 residential units in seven building of various sizes on a 4.6 acre property zoned Sylvan Lake Planned Unit Development.

DISCUSSION:

This property originally proposed as a site for a Kum n Go Convenience Store/Gas Station was ultimately zoned the Sylvan Lake Round-About Planned Unit Development. Please see attached Planned Unit Development Guide (PUD Guide). It allows for a maximum of 50 dwelling units (50,000 square feet) or commercial development or a combination of commercial and residential development. It also requires the dedication of an open space easement along Brush Creek and the construction of a pedestrian/bicycle trail. This trail is envisioned to become part of an integrated system linking Eagle Ranch with the Fairgrounds. The residential density of the overall development is approximately 9 dwelling units per acre. The net density of the development excluding the open space easement is approximately 13.5 dwelling units per acre. All of the interior access roads are part of the development and will be privately maintained.

The original zoning of this property when it was annexed into the Town of Eagle as part of land acquisition necessary to provide a Highway 6 access to Eagle Ranch was Residential Multi-Family.

Staff has been working with Creative West Architects on this development plan application over the last six months during which time the applicant has purchased the property. One of the key considerations to development of the property is access to Sylvan Lake Road and Highway 6. The applicant at staff's suggestion has moved the connection to Sylvan Lake Road as far to the south as possible. This provides the maximum distance from the roundabout and also facilitates the provision of the required sight distance. Access along Highway 6 is more difficult. The applicant's preference is for a right in-right out access configuration. However, if this is not possible, the applicant has agreed to have only one access to Sylvan Lake Road.

The Town has engaged Fox and Tuttle Traffic Engineers to work on behalf of the Town to evaluate and make a recommendation on this access to Highway 6. If it is determined by our traffic consultant to provide safe access, staff believes that it has secondary benefits to the overall circulation system. In review with Public Works and our Police Department we discussed the benefits of incorporating a deceleration lane and restriping of the Sylvan Lake Roundabout to operate as a full two lane roundabout. We believe that by allowing this limited access onto Highway 6, less people will be making left hand turns onto Sylvan Lake Road which will improve the functioning of this key roadway. We will work with the Fire District to better understand their needs and explain our concerns with drivers that will make left hand turns into the development from Highway 6 if the curb is not extended to prevent this movement.

DEVELOPMENT REVIEW STANDARDS (SECTION 4.06)

The general requirements for a Development Plan Review as described in Section 4.06.060.D of the Land Use and Development Code are:

1. Compliance with the Town’s ordinances, regulations, goals, policies and plans.
2. Any adverse impacts resulting from the proposed development are reasonably and adequately mitigated by the applicant to minimize such impacts.

FINDINGS FOR DEVELOPMENT REVIEW STANDARDS

Standard #1:

As discussed above, this property is zoned the Sylvan Lake Round-About Planned Unit Development. The regulations contained within that document act as the land use regulations for the property.

The development is in general compliance with the PUD Guide and the Land Use and Development Code.

The Town’s goals, policies and plans relevant to this land use application are contained within the Eagle Area Community Plan (EACP).

A finding of compliance with the EACP was made during the approval of the Planned Unit Development for this property. However, at this Development Plan review stage of the process, specifically required by the PUD Guide, we are evaluating a more detailed development plan as to its compliance with the EACP.

The Land Use Designation provided for this property in the EACP in Conservation Oriented Development.

The most relevant Intent Statement of this Designation are as follows:

1. “Balance conservation and development objectives”
2. “Preserve attributes of high conservation value as determined practicable and appropriate on a site by site basis ...”
3. Set aside an appropriate amount of land as open space to foster compact development ...”

This property is located within the Western Gateway Character Area. The most relevant Planning Principle identified for this area is to “Maintain an attractive, well managed landscape and distribution of land uses at the Town’s western boundary.”

In the Housing Chapter of the EACP the first policy is “to support and contribute to efforts to address the needs for affordable housing.” And the second policy is to promote the preservation and or creation of a wide range of housing units....”

Chapter 6 of the EACP entitled Community Design and Appearance encourages high quality design standards, a pedestrian friendly community and the creation of a “sense of place”.

It is staff’s opinion that the proposed development is in general compliance with the above reference policies of the EACP.

Standard #2:

Any adverse impacts resulting from the proposed development are reasonably and adequately mitigated by the applicant to minimize such impacts.

The staff believes that there are several additional measures that the applicant could provide to minimize adverse impacts of this development.

1. Additional landscape treatment along the back side of the Eagle Ranch Landscape Easement to buffer the development from the surrounding roadway. Incorporation of a stone wall with additional trees and bushes should be evaluated. This would provide a more managed transition from the more intensively used Round About and the Development. It would contribute to the visual quality experienced by travelers approaching this key intersection and also provide valuable sense of privacy to the residences of the development. This is one of the key planning considerations for this property when evaluating how this land use fits into its context. The building are lower than the surrounding landscaping and need a better transition..
2. Placement of one or two benches with shade trees along the proposed creek-side path.
3. Removal of patios from water and sewer easement. These patios should also be buffered from the access road. Applicant should evaluate strategies on how this might be best accomplished to provide a transition from the private patio space to the more public access drive. One idea is to use the fence railing detailing of the second story patios.
4. If the location of the proposed right in right out access is approved by our traffic consultant, staff would request the applicant consider the practicality of providing a short deceleration lane and restriping of the roundabout to allow through movement on the right hand lane.
5. Re-direct off site storm flow into the onsite storm pipe to provide better treatment through detention pond. We are concerned with the proposed separate discharge point. Staff believes this will help maintain water quality of Brush Creek.
6. Evaluate existing lighting of pedestrian crossing at round about to determine if additional light pole is necessary.
7. Show extension of 10’ wide foot path to the North West connecting the Highway 6 Bridge to ensure that it is coordinated with overall plan.
8. Work with staff to prepare open space easement to be dedicated at time of Development Plan approval.

9. Work with staff to design sewer main serving the North West building. Current design needs to be revised to comply with code.
10. Placement of trees need to be evaluated to ensure they are not located in water and sewer easements.

STAFF RECOMMENDATION:

- A. Staff recommends continuance of this application to the Planning and Zoning Commission's meeting of July 5, 2016 to address the above concerns and receive evaluation of our traffic consultant, Fox and Tuttle.

ORDINANCE NO. 25
(Series of 2013)

AN ORDINANCE OF THE TOWN OF EAGLE, COLORADO, AMENDING THE ZONE DISTRICT MAP OF THE TOWN OF EAGLE BY APPROVING A COMMERCIAL PLANNED UNIT DEVELOPMENT WITHIN THE TOWN OF EAGLE TO BE KNOWN AS THE SYLVAN LAKE ROUND-ABOUT PLANNED UNIT DEVELOPMENT AND APPROVING A SITE SPECIFIC DEVELOPMENT PLAN ESTABLISHING A VESTED PROPERTY RIGHT PURSUANT TO ARTICLE 68 OF TITLE 24, C.R.S., AND SECTION 4.17.060 OF THE EAGLE MUNICIPAL CODE.

WHEREAS, by Title 4 of the Eagle Municipal Code, the Town of Eagle enacted a comprehensive zoning ordinance for the Town, known as the Town of Eagle Land Use and Development Code; and

WHEREAS, the Board of Trustees of the Town of Eagle has received an application from Eagle Ranch Lot Investors, LLC, a Colorado limited liability company (the "Applicant"), to amend the zone district map by approving a Commercial Planned Unit Development ("C/PUD") for the real property described as Lot 1, Filing 2, West Eagle Addition, Town of Eagle, County of Eagle, State of Colorado (the "Property") in the particulars hereinafter set forth; and

WHEREAS, the Town of Eagle Planning and Zoning Commission recommended approval of the PUD Zoning Plan on March 19, 2013; and

WHEREAS, the Board of Trustees approved a P.U.D. Zoning Plan on August 13, 2013, subject to conditions; and

WHEREAS, the Applicant submitted an application for a P.U.D. Development Plan, which was found by the Town to be complete on January 15, 2013; and

WHEREAS, the Planning and Zoning Commission, following a public hearing, recommended approval of a revised P.U.D. Development Plan on September 3, 2013; and

WHEREAS, notice of a public hearing on Applicant's application for approval of the proposed P.U.D. Development Plan and rezoning of the Property has been given as required by Section 4.03.060 and 4.17.040 of the Eagle Municipal Code; and

WHEREAS, a public hearing considering said Applicant's proposed P.U.D. Development Plan and rezoning of the Property was held on October 22, 2013 as required by Chapter 4.11 of the Eagle Municipal Code; and

WHEREAS, following conclusion of the public hearing, the Board of Trustees approved the proposed P.U.D. Development Plan on October 22, 2013, for the proposed Commercial Planned Unit Development; and

WHEREAS, The Board of Trustees finds and determines that the Applicant has provided sufficient evidence that the proposed C/PUD is desirable because one or more of the purposes set forth in Section 4.11.020 of the Eagle Municipal Code have been met; and

WHEREAS, the Board of Trustees finds and determines that the Applicant has met its burden of providing evidence that the proposed C/PUD is in conformity with the Town's goals, policies, and master plan, including the Eagle Area Community Plan, and that the Applicant has met its burden of providing evidence that the area in question possesses geological, physiological, and other environmental conditions compatible with and characteristic of the uses requested, and is compatible with surrounding land uses, and that the advantages of the C/PUD requested outweigh the disadvantages of such requested zoning designation; and

WHEREAS, the Applicant has requested the vested property rights to be granted pursuant to Article 68 to Title 24, C.R.S. and Section 4.17.030 of the Eagle Municipal Code be extended from the statutory period of three (3) years to five (5) years; and

WHEREAS, the Board of Trustees has agreed to designate the P.U.D. Development Plan, as approved, as the site specific development plan for the Sylvan Lake Round-About Planned Unit Development ("Site Specific Development Plan") pursuant to Article 68 of Title 24, C.R.S., and Section 4.17.030 of the Eagle Municipal Code; and

WHEREAS, it is the intent of the Board of Trustees that its approval of the P.U.D. Development Plan, as approved with conditions, shall constitute approval of the Site Specific Development Plan establishing a vested property right for the time period of five (5) years pursuant to Article 68 of Title 24, C.R.S. and Section 4.17.060 of the Eagle Municipal Code; and

WHEREAS, the Board of Trustees has made a conditional positive determination of Adequacy of necessary public facilities in accordance with the requirements of Chapter 4.14 of the Eagle Municipal Code, subject to the conditions set forth in Section 4 below.

NOW, THEREFORE, BE IT ORDAINED BY THE BOARD OF TRUSTEES OF THE TOWN OF EAGLE, COLORADO:

Section 1. That Chapter 4.04 of the Eagle Municipal Code, as well as the Zone District Map of the Town of Eagle, established by and incorporated into said Chapter, be and the same hereby is amended so as to provide that the real property described as Lot 1, Filing 2, West Eagle Addition, situate in the Town of Eagle, County of Eagle, State of Colorado, is rezoned as Commercial Planned Unit Development (C/PUD). The zoning densities, uses, and their locations shall be those depicted in the P.U.D. Development Plan for the Sylvan Lake Round-About Planned Unit Development, as approved by the Board of Trustees, which is hereby incorporated herein by reference. The zoning designation herein approved specifically requires the Applicant's full compliance with the P.U.D. Development Plan, as approved, and the Sylvan Lake Round-About PUD Guide, dated October 22, 2013 ("P.U.D. Guide"), attached hereto as Exhibit "A" and incorporated herein by this reference.

Section 2. Upon the effective date of this Ordinance, the zoning amendment herein contained shall be promptly entered on the appropriate page of the official Zone District Map, showing general location, effective date, and nature of the change. One copy of the approved application, including the approved P.U.D. Development Plan and the approved P.U.D. Guide, shall be retained in the records of the Building Official, in order to insure that development proceeds in conformance with the requirements of the approved zone district designation and this Ordinance.

Section 3. The P.U.D. Development Plan, as approved, is hereby designated as and shall constitute the approved Site Specific Development Plan for the Sylvan Lake Round-About Planned Unit Development pursuant to Article 68 of Title 24, C.R.S., and Section 4.17.030 of the Eagle Municipal Code and by virtue of such approval, a vested property right therein has been created to be effective and continual in duration for a period of five (5) years.

In the event that Applicant commences construction of the improvements depicted in the Site Specific Development Plan, which commencement of construction shall be defined as the visible commencement of actual physical construction and operations on the Property, including without limitation, obtaining all required permits and licenses and the installation of a permanent required construction element such as a caisson, footing, foundation or wall within five (5) years from the effective date of this Ordinance, the Town acknowledges that Applicant will have perfected a common law vested property right pursuant to the laws of the State of Colorado ("Common Law Vested Right").

Section 4. Following review of the criteria for determining the availability and adequacy of community facilities as set forth in Section 14.14.080 of the Eagle Municipal Code and other applicable provisions of Chapter 14.14 of the Eagle Municipal Code, the Board of Trustees approves and adopts a conditional positive determination of Adequacy conditioned upon a final determination of adequacy of public facilities ("APF") shall be made concurrently with the Board of Trustees' consideration of development permit(s) for the Property.

Section 5. After the effective date of this Ordinance, it shall be unlawful for any person to erect, construct, reconstruct, use or alter any building or structure or to use any land in violation of the P.U.D. Guide. Any person who violates this Ordinance shall be guilty of a

municipal offense. Each person shall be deemed guilty of a separate offense for each and every day or portion thereof during which any violation of any provisions of this Ordinance are committed, continued or permitted and shall be subject to fines and/or imprisonment as provided under the Eagle Municipal Code.

Section 6. Within sixty (60) days after the effective date of this Ordinance, the Town Clerk, on behalf of the Town of Eagle, Colorado, is directed to:

a. File one copy each of the approved P.U.D. Zoning Plan, the approved P.U.D. Development Plan, the approved P.U.D. Guide, and the original of this Ordinance in the office of the Town Clerk of Eagle, Colorado;

b. File one certified copy of this Ordinance, one copy of the approved P.U.D. Development Plan, and one copy of the approved P.U.D. Guide in the office of the Eagle County, Colorado, Assessor; and

c. File for record one certified copy of this Ordinance, one certified copy of the approved P.U.D. Guide and one certified copy of the approved P.U.D. Development Plan with the Clerk and Recorder of Eagle County, Colorado.

Section 7. Within fourteen (14) days after the approval of this Ordinance, the Town Clerk, on behalf of the Town of Eagle, is hereby authorized and directed to:

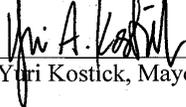

a. Publish in a newspaper of general circulation within the Town the full text of this Ordinance (without attachments); and

b. Publish concurrently with the publication of the within Ordinance a notice advising the general public that the P.U.D. Development Plan, as approved, constitutes approval of a site specific development plan establishing a vested property pursuant to Article 68 of Title 24, C.R.S., and pursuant to Section 4.17.100 of the Eagle Municipal Code.

INTRODUCED, READ, PASSED, ADOPTED, AND ORDERED PUBLISHED at a regular meeting of the Board of Trustees of the Town of Eagle, Colorado, held on November 12, 2013.

PUD Guide

Sylvan Lake Round-About Planned Unit Development

58 Sylvan Lake Road
Lot 1, West Eagle Addition Filing 2
Eagle, Colorado 81631

November 12, 2013

MPG
Mauriello Planning Group

1. Statement of Purpose and Intent

To provide for commercial, residential, and/or mixed use development within the Town of Eagle. This PUD Development Guide defines the permitted use of land, provides for open spaces, and includes additional supplementary regulations. This Guide constitutes the standards and zoning provisions with site-specific restrictions for development within this PUD. Any aspect of development not specifically addressed in this PUD Guide or on the Development Plan (the Development Areas Plan is the Development Plan for this PUD) is regulated by the Town of Eagle Land Use and Development Code. Building construction within the PUD is subject to applicable ordinances, rules, regulations, and Codes of the Town of Eagle. This PUD Guide and exhibits shall constitute a site specific development plan and creates a vested right pursuant to Article 68 of Title 24, Colorado Revised Statutes, as amended, for a period of 5 years.

2. Uses by Right*

Commercial and institutional uses:

- Retail establishment (including drive-thrus) including but not limited to:
 - Grocery store
 - Convenience store
 - Liquor store
- Restaurant (sit-down/no drive-thru)
- Coffee shop (including drive-thru)
- Tavern, including breweries and brew pubs
- Office including business, professional, and medical offices
- Lodging
- Bed and Breakfast
- Medical or Rehabilitation Clinic
- Church
- Community Building
- Public Building
- School (small specialized school such as adult education)
- Child Care Facility
- Park and Open Space
- Indoor and Outdoor Recreation Facility
- Home Occupation
- Seasonal Sales from temporary or permanent structures such as fruit and vegetable stands, etc.

Residential Uses:

- Single Family Dwellings
- Two Family Dwellings
- Multiple Family Dwellings

*Any use that may be operated 24 hours a day shall be reviewed by the Planning and Zoning Commission to ensure that impacts to residential neighbors are adequately mitigated.

3. Specifically Prohibited Uses
 - Gasoline Sales
 - Fuel Storage above or below ground
 - Storage of Hazardous Materials (excluding common household products)
 - Vehicular and Boat Service, body shops and Sales (including recreational vehicles)
 - Dry Cleaning Plant
 - Other uses not listed as a use by right or not determined to be similar to a use by right
4. Building Height

All buildings shall be limited to 35' in height. Height is defined as: the distance measured vertically from any point on a proposed or existing roof or eaves to the existing or finished grade (whichever is more restrictive) located directly below said point of the roof or eaves. Within any building footprint, height shall be measured vertically from any point on a proposed or existing roof to the existing grade directly below said point on a proposed or existing roof.
5. Non Residential/Commercial Building Footprint

The total building footprint for a commercial or non residential use shall be limited to a maximum of 15,000 sq. ft.
6. Residential Density and Square Footage

The total number of dwelling units allowed on this entire site shall not exceed 50 units. The floor area of all residential dwelling units shall be limited to a maximum of 50,000 sq. ft.
7. Building Coverage and Impervious Coverage

Building coverage and impervious coverage shall be 50% building coverage plus 20% other lot coverage for a total of 70% total coverage allowed. Development areas shall not be considered individually. These coverages shall be based upon the combined area of Development Areas 1 and 2 and shall not include the area of the open space easement.
8. Location of Uses and Development

Two development areas are shown on the attached diagram. Both areas allow for residential, commercial, and mixed use development.
9. Setbacks

Building setbacks shall be 20' from all property boundaries. Stream setbacks shall be 50' from the high water mark.
10. Open Space

An open space easement shall be provided to the Town of Eagle allowing for fishing access to Brush Creek, recreational trails, passive open areas, passive, and landscape materials. The open space area may also allow for activities related to permitted commercial and residential uses including walking paths, patios and decks with seating areas, and access to Brush Creek subject to review of the Development Permit and found to be consistent with the intent of the area as open space. Any restaurant patio or deck located within the open space easement shall be approved by Special Use Permit. The open space easement shall be located as conceptually shown on the PUD Development Plan attached and be provided at

time of Building Permit following approval of a Development Permit. The Town of Eagle shall have the right to construct a 10 foot wide recreation trail, at its expense, within the proposed open space easement at any time upon its sole discretion, in which case the owner shall dedicate an appropriate easement for this 10 foot wide recreation trail. If alignment of this trail within the easement is obstructed by wetlands and all reasonable efforts to encroach into wetland areas have been exhausted, the Town and owner shall work out a mutually acceptable alignment/easement that avoids wetlands while minimizing encroachment into the development parcels.

If the Town constructs a trail on the applicant's property within the vesting period, the applicant shall be responsible to fund the lesser of 50% of the actual costs to construct the recreation trail upon the applicant's property or \$50,000. Such funding shall be addressed at Development Permit and funded at Building Permit approval which may precede or follow the construction of the recreation trail.

If a Development Permit is obtained for development of the property prior to the construction of the trail, the applicant shall provide the Town with a \$25,000 deposit at building permit to be used solely for the construction of the recreation trail on the applicant's property and a Letter of Credit for \$25,000 at building permit. The Town shall be obliged to construct the recreation trail within the aforementioned vesting period for the Sylvan Lake Roundabout PUD. Failing to do so shall require that the Town refund the \$25,000 and release the Letter of Credit with no further obligation for the applicant to fund recreation trail construction. Should the Town complete the recreation trail as contemplated here-in, the remaining balance required of the applicant to a maximum of \$50,000 shall be immediately paid by the applicant to the Town and the Letter of Credit will be released.

If no trail is developed within the vesting period, the applicant shall have no obligation to fund the recreation trail construction whatsoever. If the recreation trail does not connect to the Eagle Ranch Trail system or to the Regional Trail system along Violet Lane, the applicant shall have no obligation to fund the recreation trail construction whatsoever.

The provisions for the establishment of the open space easement and the 50% funding (to a maximum of \$50,000) of the recreation trail construction shall be the full extent of the exactions required of the development of this property. No further exactions shall be imposed for the life of this PUD. However, exactions are not to be interpreted to include provisions required by the Municipal Code including the Land Use and Development Code.

A land dedication may be substituted for an easement at the owner's discretion.

11. Water Plant Investment Fee

Section 12.16.040 of the Eagle Municipal Code contemplates that an applicant provide an up front payment for 60% of the estimated water plant investment fees for projects demanding 10 or more EQR. Since it is unknown whether development on this property will reach the threshold for this code section (commercial development is likely to be well below 5 EQR, for example), the prepayment of water plant investment fees, if any, shall be deferred until issuance of a Development Permit.

12. **Parking**
Shall be provided in accordance with the Land Use and Development Code except that residential studio units of up to 700 sq. ft. shall only be required one to one and half parking spaces, subject to review and approval by the Planning and Zoning Commission during the review of a development permit.
13. **Signage**
All signs shall comply with the Land Use and Development Code.
14. **Exterior Lighting**
All exterior lighting shall be in accordance with the lighting standards contained in the Land Use and Development Code, except that LED of equivalent light output shall also be allowed.
15. **Accessory Uses**
Other uses customary to commercial and residential uses, including but not limited to movie rental services, newspaper boxes, ice boxes, and other outdoor display items shall be permitted.
16. **Fencing, Walls, and Railings**
Fencing and/or walls shall be required to screen trash facilities and mechanical equipment. All fencing shall be of high quality wood, metal, or masonry.
17. **Architecture**
The architecture of residential and nonresidential buildings on site shall be consistent with the policies of the Eagle Area Community Plan with specific emphasis on visual quality and consideration of policies to create a western gateway. The architecture of all buildings should be sympathetic to residential uses in the area and include the use of sloping roof forms. The use of flat roofs shall be limited to buildings designed with a historic Eagle vernacular as one may find on Broadway or within the commercial core of Eagle Ranch Village (i.e., brick facade and/or stone facade with an articulated and ornamented terminus to the parapet). Building materials may include brick, stone, wood board and baton, wood lap siding, cementitious versions of wood siding, wood timbers, exposed wood or metal beams, natural and painted metal structural members, high quality asphalt shingles, metal, and corten siding and roofing materials. Imitation stucco is not allowed. Low quality building materials such as vinyl siding shall not be allowed. The overall development of the property shall be integrated with the topography and responsive to Brush Creek as a community resource.
18. **Water Quality**
Water Quality of Brush Creek and protection of the Town's Water Intake for Lower Basin Water Treatment Plant are of the highest priority. A stormwater water management plan approved by the Town for this property shall be designed to address this high sensitivity to potential water quality degradation of Brush Creek.
19. **Landscaping**

Landscape installation shall be per Land Use and Development Code. Care will be taken to ensure that landscape materials are placed in a manner that does not inhibit commercial performance but results in an attractive presentation of the site. In addition to the landscaping that will be required within the development areas, landscape materials (trees and shrubs) shall also be required within the open space easement as shown on the attached Conceptual Open Space Landscape Plan. Landscape materials within the open space areas will be required to be shown with any Development Permit application in either Development Area 1 or 2. However, development of either Development Area 1 or 2 shall only be required to provide landscaping within the adjacent and corresponding Open Space Landscape Area 1 or 2. Should the entire site be developed as one project, the entire open space landscaping shall be completed. Any existing debris piles located anywhere on the property shall be removed with a Development Permit approval.

20. Site Access

The town shall allow appropriately designed vehicular access from Sylvan Lake Road and if the Town approves uses of the property conditioned and dependent on access from Highway 6, the Town will support an application for a State Highway Access Permit that complies with the standards for an access permit.

21. 1041

The Town will support the applicant's efforts to modify the existing 1041 approval from Eagle County for a sewer line extension to serve the uses provided for in this PUD Guide.

22. Development Permit

All development applications within this PUD shall require a Development Permit pursuant to Section 4.06 of the Land Use and Development Code. Development permit application submittals will be required to include a wetland delineation. In general impacts to wetlands should be avoided though it is specifically recognized that the extension of utilities to the property will create impacts to wetlands that cannot be avoided. These wetland impacts are recognized as acceptable by the Town. A massing study of the proposed buildings and a review of visual impacts from the roadway and the residential property to the southwest shall be provided with an application for Development Permit.

23. Subdivision

The property may be further subdivided to allow for appropriate development and ownership of the parcels. The creation of not more than four parcels shall be processed in accordance with Section 4.12.050 Minor Subdivision of the Land Use and Development Code. The creation of condominium or townhouse units shall be in accordance with Section 4.12.040 of the Land Use and Development Code. Any subdivision of the property shall not occur prior to approval of a Development Permit.

24. Amendment to PUD

Any changes to this PUD Guide shall follow the procedures established in Section 4.11.050 of the Land Use and Development Code. However, minor changes to the plans, landscaping, signage, or building which do not change the overall intent of the character of the PUD may be approved by the Town Planner. Any decision of the Town Planner may be appealed in writing to the Board of Trustees pursuant to the Municipal Code.

Approved by Eagle Ranch Lot Investors LLC, a Colorado limited liability company, the developer of the Sylvan Lake Round-About Planned Unit Development, this ____ day of November, 2013.

58 Sylvan Lake Road

Submittal: 05/24/2016

Project Description

The project is located on the south west corner of the intersection of Sylvan Lake Road and Highway 6 and is bordered to the south by Brush Creek. Access is proposed to be from Sylvan Lake Road and a right-in right-out only access from Highway 6¹.

The property's zoning is a PUD, which allows for up to 50 Multiple Family Dwelling, with a maximum floor area of 50,000 sf.

The proposed project is (42) attached residential dwelling units with a residential floor area of 49,953 sf. (38) of the dwelling units will be market rate and (4) of the units will be deed restricted, as administered through the LERP program.

The project has been designed to meet the need for attainable priced housing and is comprised of a mix of 1, 2 and 3 bedrooms, as follows:

- (5) 1-Bedroom @ 1,000 sf (plus 1-car garage)
- (10) 2-Bedroom @ 1,048 sf (plus 1-car garage)
- (25) 2-Bedroom @ 1,229 sf (plus 1-car garage)
- (2) 3-Bedroom @ 1,874 sf (plus 2-car garage)

Each dwelling unit has an enclosed garage and all but the 1-Bedroom units have sufficient driveway length to provide stacked parking in front of the unit. The interior of the homes have open living spaces with large windows and modern design features. Each dwelling unit will have both a covered front porch as well as a rear deck large enough for outdoor living. The majority of units will have a tall crawlspace and stair access that will allow for ample household storage. All of the units are 2-levels, with the exception of the 1-Bed units that are 3-levels with the garage located below the main living area.

The units would be owned lot and block, with the lots fronting on a private road. Each dwelling unit would have exclusive use of some outside yard and driveways and would be responsible for exterior maintenance of the siding, roofing and decks. Each unit would have its own water and sewer tap.

The HOA will be responsible for maintaining the property not contained within the lot and block parcels, which shall include the internal vehicular and pedestrian circulation, parking areas, signage, common landscaping, trash enclosures and site lighting. They would also be responsible for maintenance of commonly shared elements of the buildings and or site, including water leaks, snow removal, waste removal, etc.

¹ Because the access from Highway 6 is dependent on CDOT until devolution of the road to the Town of Eagle takes place, the developers have provided a design for an interim emergency only access until such time that the Town can issue a permit the 2nd access.

Landscaping

The landscape design provides for a large amount of trees and bushes to soften the edge of the development and provide for screening between homes. Trees and bushes are placed at the front of each dwelling unit in a manner that gives each unit the sense of a private yard. A 15' wide landscape buffer is provided around the property, with the exception of the north edge bordering Highway 6, where the landscape buffer is proposed to move closer to the edge of the road through the application of right of way easement with CDOT. The purpose of shifting the landscaping into the right of way was to provide stacked parking at Buildings G & F in order to limit the size of the parking lots.

Part of the project's proposed site improvements cross over the existing Eagle Ranch HOA landscape easement. The developers have had discussions with the HOA Manager and DRB Administrator about the process of modifying the easement location and augmentation of the landscaping in the easement in exchange for the infringement. The Eagle Ranch Manager indicated that they would prefer the Town to weigh in on the proposed development before taking the easement modification to the HOA Board.

Maintenance of the landscaping that is in the common area, including the open space easement and landscaping in the Highway 6 right of way, will be provided by the development's HOA. Maintenance will include: spring clean-up and refreshing of ground cover; weekly mowing, plant and tree care; regular application of nutrients and pesticides in a manner that is most eco-friendly and excludes the use of chemicals known to be harmful to the environment; fall clean-up. In addition, the HOA will provide trash removal from the publicly accessible area adjacent to the creek and will maintain the grill and benches.

Exterior lighting standards will be designed for a residential environment and will maintain minimal lighting levels for the health and safety of the residents (refer to lighting plan). Site lighting will be provided on a motion detector at the trash enclosures and with bollards along primary sidewalks and at parking areas. In addition, lighting that meets Town standards will be provided at the project's monument signs. Primary lighting will be provided at each residence with motion activated fixtures provided at each dwelling unit's garage and entry porch.

Snow storage will be provided on site at the end of the western parking lot. In the event that snow fall exceeds the capacity of typical plowing, skid-steers will store the snow in the area indicated on the landscape plans as 'snow storage'. The snow storage area is located such that melting snow will flow to the detention pond instead of melting directly into the creek.

Architectural Design

The architectural form of the buildings is contemporary, while the selection of exterior siding was based on materials that are commonly found in the area. Lap siding, stained wood, corrugated metal and flat panels are combined on the exterior in a dynamic way to create massing that is different than traditional building design, but still familiar. The shed roofs are indicative of design found on the Highway 6 corridor.

To create a human scale, each dwelling unit has a covered entry porch and at each common wall the roof massing is stepped to break the ridge. The siding for each unit will be changed so that each home will be unique. The variety of materials and the variation of the building forms are intended to reflect

the individuality of the occupants within. The treatment of the massing and choice of exterior siding recognizes traditional materials and forms, while expressing a modern lifestyle.

Open Space

The project shall provide an Open Space easement along Brush Creek for the benefit of the residents and for the Town of Eagle. It is anticipated that the Town's trail system will connect through the property in the future, and a 10' wide easement shall be dedicated for the recreation trail. In addition, (3) parking spaces are provided in the west parking area for the public who will have access for fly fishing. An area adjacent to the creek is proposed that will have seating, trash bins and an outdoor grill. This area will have stepping stones that will allow a defined access to the creek for the public.

It is proposed that the \$50,000 identified in the PUD for the purpose of the recreation trail, be allocated to the rough-in of the recreational trail as well as the pro-rated cost of the (3) parking spaces for fly fishing, the path connecting them, the publicly available grilling area and the defined access to the creek.

Phases

The project is anticipated to be completed in 2 phases. The 1st Phase will include Buildings A, B and C and the internal access roads serving them. The 2nd Phase will include Buildings D, E, F & G and the adjacent roads serving them. The scheduling of the work is anticipated to be as follows:

Phase I (beginning summer of 2016)

- Site and sub-grade infrastructure (July 2016)
- Foundation and form work (August-October 2016)
- Framing (August-March 2017)
- Finishes (October-May 2017)
- Unit Completion (March-June 2017)
- Landscaping (May-June 2017)

Phase II (beginning Spring 2017)

- Site and sub-grade infrastructure (May 2017)
- Foundation and form work (June 2017)
- Framing (June-January 2017)
- Finishes (August-March 2018)
- Unit Completion (November-March 2018)
- Landscaping (May-June 2018)

Flood Plain

The development is currently in the process of adjusting the FEMA recognized flood plain to a 100-year flood plain that accurately reflects the conditions on the property and adjacent parcels. Phase I and Buildings D & E are entirely outside the current FEMA defined 100-year flood plain. The rest of the development is outside the 100-year flood plain, as defined in the LOMAR application. Construction of those buildings contained in the FEMA 100-year flood plain shall not begin until the new flood plain has been accepted by FEMA, which is expected to be completed the beginning of 2017.

Soils and Grading

The site requires cut on the eastern end of the property and fill closer to the creek and to the west. The creek side of the townhouses will require retaining walls, which shall be boulder retaining walls as described on Sheet C7.1 of the Civil plans.

The soils report indicates that typical foundation design is feasible, although some areas have been identified where fill will need to be replaced/compacted and where ground water will limit the depth of crawlspaces on the western-most units.

The evaluation of the soils by the Geo Tech during excavation will determine how much soil, if any, needs to be exported from the site. The project will require that soils are imported in Phase II.

Variance Requested

The developers ask for the following variances from the PUD:

- 1) Landscape easement of 15'. Request that the landscape buffer be allowed to be placed in the CDOT right of way for Highway 6 in order to allow enough room to get stacked parking on the north side of Buildings G & F. The reason to do so would be to provide for (2) cars to park at each residence and to keep the size of the west parking lot to a minimum.
- 2) Funds for recreation trail. Request that money allocated for the recreation trail be allowed to pay for the fly fishing parking spots, the access from the parking to the recreation trail, the publicly available grill area, and for the defined access to the creek.

The developers ask for the following variance from the Highway 6 Corridor Design Standards:

- 3) Roof slope. Design standards call for roofs to be asphalt or standing seam metal roof matte finish with minimum slope of 5:12. Proposed roofs are 2:12, and desired so that the view of the roof surface from the adjoining roads is minimized.

Statement of Architectural Design

Materials:

- Siding
 - Lap siding w/ max. 8" exposure and smooth finish to be pre-painted composite material
 - Panel to be composite with smooth finish 4'x8' panels with z-flashing at joints
 - Corrugated siding to be dull metal finish
 - Stained 1x8 shiplap boards to be composite with wood grain texture and finish
- Roofing
 - Architectural asphalt shingles
- Windows
 - Vinyl clad, with Low-E glass
- Garage Doors
 - Insulated steel doors

Demonstrate:

- Orientation – The units along the creek are oriented to face the creek and the views to the south and west. The living spaces of the creek-side units are on the back side of the townhouses, so that the entry and garage create a buffer from Highway 6 and from the Phase I units. The units on the east side are oriented for views to the mountain ranges to the east. Building A is three stories and placed to provide a visual buffer against traffic traveling east on Highway 6. The roads are designed to allow for at least some period of direct solar access during the day.
- Sun - All units have direct solar access during the day, and the exterior decks all have direct sun during the day.
- Views – Good views surround the property, with the primary views being of Brush Creek and the hills beyond to the south, the Sawatch Range to the east and Castle Peak to the north. All units have views of at least one of these features from the living areas and exterior decks.
- Natural light – windows are large and designed for a high level of natural light.
- Shadows – The buildings are pulled away from the internal roads and sidewalks in an attempt to allow as much sunlight as possible to hit them in the winter. No shadows are cast on adjoining properties.
- Ventilation for inhabitants – All units have windows on at least two wall surfaces, allowing for good natural ventilation. All habitable rooms (excluding bathrooms) have operable glazing to facilitate natural ventilation.
- Prevailing winds – Prevailing winds are from the west, however the site is fairly low and is not expected to suffer inordinately from wind exposure.
- Slopes – Slopes on the site are moderate and have been mitigated with retaining walls.
- Existing and future drainage patterns – nearly all drainage is retained on site and there is little to no new drainage that would leave the site. Civil plans describe strategy for retaining water on site in a manner that preserves water quality prior to run-off entering the creek.
- Snow shedding – Roofs are designed such that snow falls on the area directly in front of or behind each dwelling unit. Entries are covered with either flat or roofs sloped to shed snow in areas away from pedestrian travel.
- Existing landscaping – The existing trees and grasses will be left natural outside the limit of work in order to maintain the existing character property.
- Pedestrian circulation – The site has sidewalks or recreation trails that reasonably connect all the residential areas of the site. In addition the sites pedestrian circulation connects to the larger Town trail system at the access point off of Sylvan Lake Road and at the round-about.

- Compatibility with scale – Architectural design brings down the scale through the use of the entry porch roof, the many and varied roof planes and the use of various siding materials.

Compatibility with Highway 6 Corridor Design Standards

- The vernacular described in the design standards included shed roofs and porches that project covered with a separate roof.
- Goals include:
 - Reduce the scale of the buildings
 - Solid to void variation
- Materials
 - Maximum exposure for lap siding is 8”
 - All façade materials to have low reflectivity

Preliminary Development Impact Report

05/24/2016

Below is the respondents answer to whether or not the development will or will not possibly affect the environment:

1. By altering an ecological unit or land form, such as a ridgeline, saddle, draw, ravine, hill side, cliff, slope, creek, marsh, watercourse, or other natural land form feature;

Project will change the topography in an area that is more than 50' away from Brush Creek.

2. By directly or indirectly affecting a wildlife habitat, feeding, or nesting ground;

Wildlife habitats and use are outlined on page 6 of the Wetlands Permit application included in this submittal. Other than the stream crossing for the sewer line, there were no other precautions recommended related to wildlife. The stream crossing will be done in coordination with the proper authorities to ensure that the work done will not negatively impact the fish species present.

3. By substantially altering or removing native grasses, trees, shrubs, or other vegetative cover;

Native grasses will be replaced on the majority of the site.

4. By affecting the appearance or character of a significant scenic area or resource, or involving buildings or other structures that are of a size, bulk, or scale that would be in marked contrast to natural or existing cultural features;

N/A, as this site has been identified as one that is appropriate for development and the scale of the buildings are designed to be human scale.

5. By potentially resulting in avalanche, landslide, siltation, settlement, flood, or other land-form change of hazard to health and safety;

No.

6. By discharging toxic or thermally abnormal substance or involving use of herbicides or pesticides, or emitting smoke, gas, steam, dust, or other particulate matter;

No.

7. By involving any process which results in odor that may be objectionable or damaging;

No.

8. By requiring any waste treatment, cooling, or settlement pond, or requiring transportation of solid or liquid wastes to a treatment or disposal site;

A detention pond is provide for in the design to allow run-off generated on site to settle out particulates.

9. By discharging significant volumes of solid or liquid wastes;

No.

10. By increasing the demand on existing or planned sewage disposal, storm drainage, water distribution system, streets, or other utility systems to a level which is likely to cause an adverse impact on the environment;

No.

11. By involving any process which generates noise that may be offensive or damaging;

No.

12. By either displacing significant numbers of people or resulting in a significant increase in population;

No.

13. By pre-empting a site which is desirable for recreational uses or planned open space;

No.

14. By altering local traffic patterns or causing an increase in traffic volume or transit service need;

No.

15. By substantially affecting the revenues or expenditures of the Town government.

No.

16. By increasing the demand on existing or planned school facilities to a level which is likely to cause an adverse impact on such school facilities, an adverse impact on educational opportunities, or an adverse impact on the revenues and expenditures of the Eagle County School District RE 50-J.

No.

17. By being a part of a larger project which, at any future stage, may involve any of the impacts listed above.

No.

No.

13. By pre-empting a site which is desirable for recreational uses or planned open space;

No.

14. By altering local traffic patterns or causing an increase in traffic volume or transit service need;

No.

15. By substantially affecting the revenues or expenditures of the Town government.

No.

16. By increasing the demand on existing or planned school facilities to a level which is likely to cause an adverse impact on such school facilities, an adverse impact on educational opportunities, or an adverse impact on the revenues and expenditures of the Eagle County School District RE 50-J.

No.

17. By being a part of a larger project which, at any future stage, may involve any of the impacts listed above.

No.

Preliminary Development Impact Report

05/24/2016

Below is the respondents answer to whether or not the development will or will not possibly affect the environment:

1. By altering an ecological unit or land form, such as a ridgeline, saddle, draw, ravine, hill side, cliff, slope, creek, marsh, watercourse, or other natural land form feature;

Project will change the topography in an area that is more than 50' away from Brush Creek.

2. By directly or indirectly affecting a wildlife habitat, feeding, or nesting ground;

Wildlife habitats and use are outlined on page 6 of the Wetlands Permit application included in this submittal. Other than the stream crossing for the sewer line, there were no other precautions recommended related to wildlife. The stream crossing will be done in coordination with the proper authorities to ensure that the work done will not negatively impact the fish species present.

3. By substantially altering or removing native grasses, trees, shrubs, or other vegetative cover;

Native grasses will be replaced on the majority of the site.

4. By affecting the appearance or character of a significant scenic area or resource, or involving buildings or other structures that are of a size, bulk, or scale that would be in marked contrast to natural or existing cultural features;

N/A, as this site has been identified as one that is appropriate for development and the scale of the buildings are designed to be human scale.

5. By potentially resulting in avalanche, landslide, siltation, settlement, flood, or other land-form change of hazard to health and safety;

No.

6. By discharging toxic or thermally abnormal substance or involving use of herbicides or pesticides, or emitting smoke, gas, steam, dust, or other particulate matter;

No.

7. By involving any process which results in odor that may be objectionable or damaging;

No.

8. By requiring any waste treatment, cooling, or settlement pond, or requiring transportation of solid or liquid wastes to a treatment or disposal site;

A detention pond is provide for in the design to allow run-off generated on site to settle out particulates.

9. By discharging significant volumes of solid or liquid wastes;

No.

10. By increasing the demand on existing or planned sewage disposal, storm drainage, water distribution system, streets, or other utility systems to a level which is likely to cause an adverse impact on the environment;

No.

11. By involving any process which generates noise that may be offensive or damaging;

No.

12. By either displacing significant numbers of people or resulting in a significant increase in population;

No.

13. By pre-empting a site which is desirable for recreational uses or planned open space;

No.

14. By altering local traffic patterns or causing an increase in traffic volume or transit service need;

No.

15. By substantially affecting the revenues or expenditures of the Town government.

No.

16. By increasing the demand on existing or planned school facilities to a level which is likely to cause an adverse impact on such school facilities, an adverse impact on educational opportunities, or an adverse impact on the revenues and expenditures of the Eagle County School District RE 50-J.

No.

17. By being a part of a larger project which, at any future stage, may involve any of the impacts listed above.

No.

Native grasses will be replaced on the majority of the site.

4. By affecting the appearance or character of a significant scenic area or resource, or involving buildings or other structures that are of a size, bulk, or scale that would be in marked contrast to natural or existing cultural features;

N/A, as this site has been identified as one that is appropriate for development and the scale of the buildings are designed to be human scale.

5. By potentially resulting in avalanche, landslide, siltation, settlement, flood, or other land-form change of hazard to health and safety;

No.

6. By discharging toxic or thermally abnormal substance or involving use of herbicides or pesticides, or emitting smoke, gas, steam, dust, or other particulate matter;

No.

7. By involving any process which results in odor that may be objectionable or damaging;

No.

8. By requiring any waste treatment, cooling, or settlement pond, or requiring transportation of solid or liquid wastes to a treatment or disposal site;

A detention pond is provide for in the design to allow run-off generated on site to settle out particulates.

9. By discharging significant volumes of solid or liquid wastes;

No.

10. By increasing the demand on existing or planned sewage disposal, storm drainage, water distribution system, streets, or other utility systems to a level which is likely to cause an adverse impact on the environment;

No.

11. By involving any process which generates noise that may be offensive or damaging;

No.

12. By either displacing significant numbers of people or resulting in a significant increase in population;

No.

13. By pre-empting a site which is desirable for recreational uses or planned open space;

No.

14. By altering local traffic patterns or causing an increase in traffic volume or transit service need;

No.

15. By substantially affecting the revenues or expenditures of the Town government.

No.

16. By increasing the demand on existing or planned school facilities to a level which is likely to cause an adverse impact on such school facilities, an adverse impact on educational opportunities, or an adverse impact on the revenues and expenditures of the Eagle County School District RE 50-J.

No.

17. By being a part of a larger project which, at any future stage, may involve any of the impacts listed above.

No.

Preliminary Development Impact Report

05/24/2016

Below is the respondents answer to whether or not the development will or will not possibly affect the environment:

1. By altering an ecological unit or land form, such as a ridgeline, saddle, draw, ravine, hill side, cliff, slope, creek, marsh, watercourse, or other natural land form feature;

Project will change the topography in an area that is more than 50' away from Brush Creek.

2. By directly or indirectly affecting a wildlife habitat, feeding, or nesting ground;

Wildlife habitats and use are outlined on page 6 of the Wetlands Permit application included in this submittal. Other than the stream crossing for the sewer line, there were no other precautions recommended related to wildlife. The stream crossing will be done in coordination with the proper authorities to ensure that the work done will not negatively impact the fish species present.

3. By substantially altering or removing native grasses, trees, shrubs, or other vegetative cover;

Native grasses will be replaced on the majority of the site.

4. By affecting the appearance or character of a significant scenic area or resource, or involving buildings or other structures that are of a size, bulk, or scale that would be in marked contrast to natural or existing cultural features;

N/A, as this site has been identified as one that is appropriate for development and the scale of the buildings are designed to be human scale.

5. By potentially resulting in avalanche, landslide, siltation, settlement, flood, or other land-form change of hazard to health and safety;

No.

6. By discharging toxic or thermally abnormal substance or involving use of herbicides or pesticides, or emitting smoke, gas, steam, dust, or other particulate matter;

No.

7. By involving any process which results in odor that may be objectionable or damaging;

No.

8. By requiring any waste treatment, cooling, or settlement pond, or requiring transportation of solid or liquid wastes to a treatment or disposal site;

A detention pond is provide for in the design to allow run-off generated on site to settle out particulates.

9. By discharging significant volumes of solid or liquid wastes;

No.

10. By increasing the demand on existing or planned sewage disposal, storm drainage, water distribution system, streets, or other utility systems to a level which is likely to cause an adverse impact on the environment;

No.

11. By involving any process which generates noise that may be offensive or damaging;

No.

12. By either displacing significant numbers of people or resulting in a significant increase in population;

No.

13. By pre-empting a site which is desirable for recreational uses or planned open space;

No.

14. By altering local traffic patterns or causing an increase in traffic volume or transit service need;

No.

15. By substantially affecting the revenues or expenditures of the Town government.

No.

16. By increasing the demand on existing or planned school facilities to a level which is likely to cause an adverse impact on such school facilities, an adverse impact on educational opportunities, or an adverse impact on the revenues and expenditures of the Eagle County School District RE 50-J.

No.

17. By being a part of a larger project which, at any future stage, may involve any of the impacts listed above.

No.

Preliminary Development Impact Report

05/24/2016

Below is the respondents answer to whether or not the development will or will not possibly affect the environment:

1. By altering an ecological unit or land form, such as a ridgeline, saddle, draw, ravine, hill side, cliff, slope, creek, marsh, watercourse, or other natural land form feature;

Project will change the topography in an area that is more than 50' away from Brush Creek.

2. By directly or indirectly affecting a wildlife habitat, feeding, or nesting ground;

Wildlife habitats and use are outlined on page 6 of the Wetlands Permit application included in this submittal. Other than the stream crossing for the sewer line, there were no other precautions recommended related to wildlife. The stream crossing will be done in coordination with the proper authorities to ensure that the work done will not negatively impact the fish species present.

3. By substantially altering or removing native grasses, trees, shrubs, or other vegetative cover;

Native grasses will be replaced on the majority of the site.

4. By affecting the appearance or character of a significant scenic area or resource, or involving buildings or other structures that are of a size, bulk, or scale that would be in marked contrast to natural or existing cultural features;

N/A, as this site has been identified as one that is appropriate for development and the scale of the buildings are designed to be human scale.

5. By potentially resulting in avalanche, landslide, siltation, settlement, flood, or other land-form change of hazard to health and safety;

No.

6. By discharging toxic or thermally abnormal substance or involving use of herbicides or pesticides, or emitting smoke, gas, steam, dust, or other particulate matter;

16. By increasing the demand on existing or planned school facilities to a level which is likely to cause an adverse impact on such school facilities, an adverse impact on educational opportunities, or an adverse impact on the revenues and expenditures of the Eagle County School District RE 50-J.

No.

17. By being a part of a larger project which, at any future stage, may involve any of the impacts listed above.

No.

Local Employee Residency Plan

The goal of this project is to provide market rate housing that is attainable for middle income individuals. The (42) attached units have been designed to be both efficient and attractive. In addition, the development will provide permanently affordable units for the long-term benefit of the community. The permanently affordable units will comply in full with Town of Eagle Residency Program (LERP) requirements and guidelines.

Pursuant to Ordinance #19, Series of 2002, the development will provide (4) permanently affordable units. The proposed development has (42) dwelling units, with the requirement that 10% of the units are to be deed restricted. The Land Use and Development Code states that if the number of units required results in a fraction, then the quantity is to be rounded down to the nearest whole number:

- *Section 4.04.120 (E) 1: ... For those developments of thirty (30) or more residential units whose calculation results in a fraction of a unit, the Local Employee Residence requirement shall be rounded to the nearest integer (up or down).*

Of the (42) attached units proposed, the following is a description of number of bedrooms, size (of conditioned space) and parking spaces.

(25) Unit A	2-Bedroom [1,229 sf] w/1-car garage and 1-stacked parking space
(10) Unit B	2-Bedroom [1,048 sf] w/1-car garage and 1-stacked parking space
(2) Unit C	3-Bedroom [1,874 sf] w/2-car garage and 2-stacked parking spaces
(5) Unit D	1-Bedroom [1,000 sf] w/1-car garage and 1-dedicated parking space

It is proposed that (3) of the (4) LERP units are to be constructed in Phase I, located in Building B. The 4th LERP unit would be constructed in Phase II and would be on the western end of Building G. See attached 'Exhibit A'. The following units would be permanently affordable:

Initial LERP Sales Price for Phase I: \$311,850

Building B-3	2-Bedroom [1,048 sf] w/1-car garage and 1-stacked parking space
Building B-4	2-Bedroom [1,048 sf] w/1-car garage and 1-stacked parking space
Building B-11	2-Bedroom [1,048 sf] w/1-car garage and 1-stacked parking space

Initial LERP Sales Price of Phase II: \$311,850 (to be determined at commencement of Phase II)

Building G-2	2-Bedroom [1,229 sf] w/1-car garage and 1-stacked parking space
--------------	---

The initial sales price was generated in coordination with Tori Franks, the program administrator with the Eagle County Housing Department.

The average size of LERP Units is 1,093 sf

The average size of the market rate units is 1,199 sf

Concept for marketing to households eligible for the LERP residences would follow the Town guidelines. Working with direction from the program administrator, advertising will first focus on local buyers through on-site signage, newspaper advertisements and open houses. Any eligible buyers will be referred to the program administrator to verify that they are qualified for the LERP program.

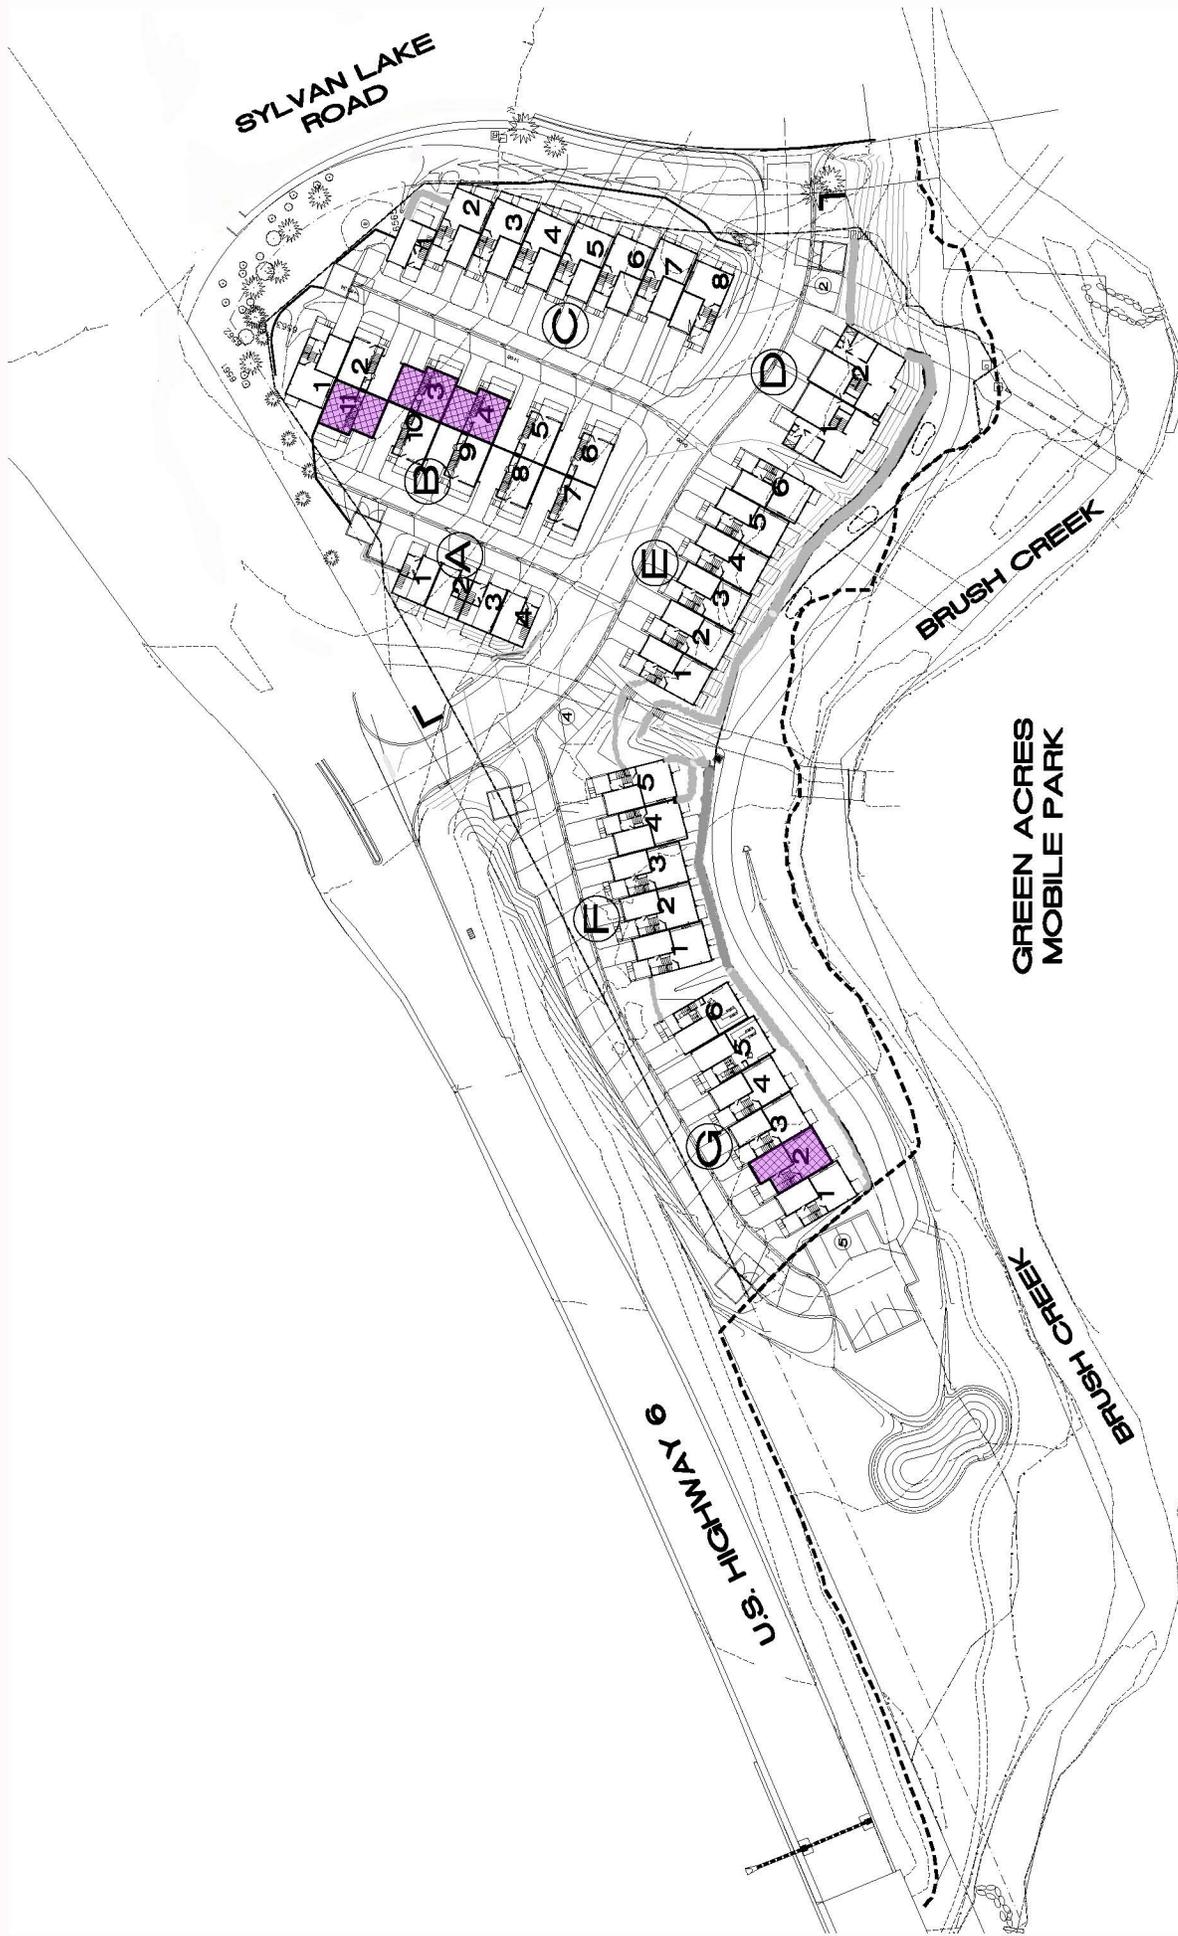

Diagram of LERP Unit Locations
Exhibit A

Compatibility with Town Goals

Western Gateway. The proposed project would become the western the edge of the urban boundary of Town, as well as framing the entry of Eagle Ranch. It is highly visible for vehicles coming from the west on Highway 6, and it is anticipated to be a vital link in the recreational trail system. The proposed project would provide an attractive and well managed landscaped gateway to Town.

The architecture is designed at a residential scale, with stepped massing and varied wall / roof lines. The roof forms are a contemporary version of a shed roof style. The intent of the design is to merge the more rural character of the shed roofline with the compactness of attached housing, while still expressing the individuality of each home. Entry roofs extend from the street side of the buildings so that the garage doors are obscured from the sight lines of passing traffic. Trees are proposed in front of each residence that face Highway 6 to further soften the façade of the buildings and create an appealing landscape screen.

To the greatest extent possible, parking has been provided as enclosed garages and stacked in the driveways to minimize the need for parking lots. Parking lots are kept small and are scattered throughout the development. The parking area to the west is heavily screened on its western edge. Trees are grouped so that when fully mature, they will create a soft screen for the residential structures on both sides of the creek.

Ornamental trees and landscaping have been proposed along the southern side of Highway 6 to define the arrival to Town. The landscaping adjacent to the road will give a visual clue to drivers to slow before entering the round-about. The current landscape easement at the round-about, turning onto Sylvan Lake Road, will be augmented with deciduous and evergreen trees to increase the existing screening and further enhance that corner.

While much of the existing site is natural grasses, there are currently piles of fill, a dirt parking area, an abandoned bridge and an old fence bordering the creek that detract from the potential attractiveness of the site. All these elements would be removed and/or remediated by the proposed development, making the property a more appealing western approach to Town.

Open Space. The proposed 1.58 acre Open Space Easement along the creek will preserve public access to Brush Creek and will host a 10' wide section of multi-use path that will connect to the rest of the recreational trail system. Visible from both Highway 6 and Sylvan Lake Road, the landscaped Open Space easement will present a welcoming scene to those approaching the site.

A seating area near the existing bridge will have stone slab benches and shade trees around an outdoor grill. Natural stone steps will create a defined pathway to allow the public to access the creek. Three parking spaces will be reserved in the western parking area for fly fishermen. Along the 10' path, two bench areas will offer seating next to the creek. The HOA will maintain the landscape in the Open Space easement and will be responsible for waste removal for the trash can located in the seating area.

It is proposed that the \$50,000 required from the developer in the PUD for construction of the recreation trail go toward the construction of the 10' section of recreation trail, the three fly fisherman parking spot and the seating area described above.

Trash Enclosures. Careful consideration has been given to the design of the trash enclosures. The materials employed will be of equal quality as those on the residences. All the access doors to the trash enclosures face away from the surrounding roads. The enclosures are either heavily screened with landscaping or they are tucked into the surrounding grade. The trash enclosures are placed around the property in a such a way as to allow each of the residents to walk their trash from their homes, rather than drive. Each residence is within 150' of a trash enclosure.

Pedestrian Connectivity. One of the goals of the development is to facilitate pedestrian and cyclist connectivity internal to the project and to the larger trail network.

Internally, the parking areas have been dispersed throughout the site to allow visitors and residents to park near their destination. Handicap parking spaces are located in the center of the development. The parking area to the west is connected to the primary entry road via the recreational path, then by either a paved path between Buildings E & F or by a more rustic path to the east of Building D.

A 5' wide sidewalk runs adjacent to the primary entry road and then connects to the sidewalk network on the other side of Sylvan Lake Road by a pedestrian crosswalk south of the round-about. The sidewalk between the development and the crosswalk would be in the Sylvan Lake right-of-way and would be 6' wide.

A pedestrian walkway across Sylvan Lake Road at the access point was analyzed by the Traffic Engineer, but it was deemed that there are not sufficient sight distances to allow for a safe crossing.

The anticipated recreation trail along Brush Creek will create an ideal connection from the development to existing and future trails. It is proposed that a portion of the recreational trail be constructed between the western parking lot and the east end of the property. The connection points to the trail network on the east and west ends of the property will come at a later date, but will be covered by an easement granted to the Town. Along the recreational trail, the development will construct benches and a seating area that has defined access to the creek as a public benefit. We are looking forward to participating as a vital link in the chain of the regional trail system.

CERTIFICATE OF DEDICATION AND OWNERSHIP

The undersigned, West Eagle Ranch LLC, a Delaware Limited Liability Company, being the sole owner in fee simple of all that real property described as follows:

Lot 13, Block 40, West Eagle Addition to the Town of Eagle, Colorado according to the Final Plat thereof as filed for record January 3, 1977 at Reception No. 147565 in the office of the Clerk and Recorder, County of Eagle, State of Colorado; containing 6.993 acres more or less.

and as shown on the accompanying Plat, has by these presents laid out, platted and subdivided the same into lots and tracts as shown on this Plat and designated the same as West Eagle Addition, Filing 2, a subdivision in the Town of Eagle, County of Eagle, State of Colorado; and does hereby make the following dedications and grants:

Tract R-2 and Tract R-3 shown hereon being Public Road Right-of-Way to the full width of the platted right-of-way are hereby dedicated to the Town of Eagle for use by the general public forever as public streets, and for drainage and utility purposes and the easements as listed in note number 4 shown hereon.

All utility easements as shown on this Final Plat are dedicated to the Town of Eagle for use by authorized service providers as perpetual easements for the installation, operation, maintenance and repair of utilities and appurtenances thereto including but not limited to electric lines, natural gas pipelines, wastewater lines, water lines, telephone lines, cable service lines, other broadband communication service lines and also for the installation and maintenance of traffic control facilities, street lighting, street trees and grade structures.

The dedication of the easements shown hereon to the Town preclude the installation of improvements, including but not limited to, trees, shrubs, rocks, the deposit of materials, or the alteration of existing ground elevation, within the easement area, which could in any manner impair the Town's or other service providers' use of the easements as provided in this dedication.

The undersigned hereby accepts the responsibility for the completion of all required Public Improvements for West Eagle Addition, Filing 2, Subdivision, and further, hereby grant the right to install and maintain all necessary structures to the entity responsible for providing the service for which easements are established.

EXECUTED this 6th day of February, 2006.

BOARD OF TRUSTEES CERTIFICATE

This Plat approved by the Board of Trustees of the Town of Eagle, Colorado, this 10th day of JANUARY, 2006, for filing with the Clerk and Recorder of Eagle County, Colorado, and for conveyance or dedication to the Town of Eagle the public dedications shown hereon; subject to the provisions that approval in no way obligates the Town of Eagle for financing or constructing of improvements on said lands, streets or easements dedicated to the public except as specifically agreed to by the Board of Trustees of the Town of Eagle. Further, said approval in no way obligates the Town of Eagle for maintenance of public improvements until construction of said improvements has been completed in accordance with the Town of Eagle's specifications and the Town of Eagle has agreed to accept said improvements. This approval does not guarantee that the size, soil conditions, sub-surface geology, ground water conditions, or flooding conditions of any lot shown hereon are such that a building permit, development permit, or any other required permit will be issued. This approval is with the understanding that all expenses involving required improvements for all utility services, paving, grading, landscaping, curbs, gutters, sidewalks, road lighting, road signs, flood protection devices, drainage structures, and all other improvements that may be required shall be the responsibility of the owners designated hereon and not the Town of Eagle, unless otherwise specifically agreed to in writing by the Board of Trustees.

By: [Signature]
Deputy

NOTES:

- The purpose of this Final Plat is to (i) create various Lots, Tracts, and Rights-of-way as listed in the Land Use Summary on Sheet 1 of this Plat, pursuant to Town of Eagle Land Use Regulations and Colorado Revised Statutes concerning the subdivision of Land to be recorded with the Eagle County Clerk and Recorder pursuant to C.R.S. 38-35-109 such that each Lot may be uniquely described with reference to this Final Plat; (ii) create various Easements for the purposes described hereon.
- BASIS OF BEARING: N66°51'21"E, 370.18' along the southerly boundary of the U.S. Highway 6 right-of-way as shown on the Annexation Plat, Wastewater treatment Facility Annexation, Reception No. 599898, between a found Colorado Department of Highways brass cap monument set in concrete and a found 5/8" rebar and 2" aluminum cap stamped "LS 23089 TOWN OF EAGLE BOUNDARY".
- SURVEY DATE: February 17, 2005 through January 13, 2006.
- West Eagle Ranch LLC, hereby dedicates to the Town of Eagle the following perpetual, non-exclusive easements and rights-of-way:
 - Tract R-2 and Tract R-3 as Public Right-of-Way.
 - Utility and Pedestrian easement on, over, across and through those areas designated hereon as "Utility and Pedestrian Easement" for the purpose of i) the installation, use, repair, replacement, improvement and maintenance of utilities of any kind whatsoever, including but not limited to waterlines and hydrants, sanitary sewer lines and manholes, telephone lines, cable television lines, gas lines, electric lines, fiber optic lines and other communications lines and all related structures, together with a perpetual right of ingress thereto, ii) installation, use, repair, replacement, improvement, and maintenance of walkways, paths, and related structures, together with a perpetual right of ingress thereto.
 - Utility Easement on, over, under, above, across and through those areas designated hereon as "Utility Easement" for the purpose of the installation, use and repair, replacement, and maintenance of utilities of any kind whatsoever, including but not limited to waterlines and hydrants, sanitary sewer lines and manholes, telephone lines, cable television lines, gaslines, electric lines, fiber optic lines and other communication lines and all related structures, together with a perpetual right of ingress and egress thereto.
 - Drainage Easement on, over, under, above, across and through those areas designated hereon as "Drainage Easement" for the purposes of storm drainage, drainage of water flowing from other lands along with the installation, use and repair, replacement, improvement and maintenance of drainage structures including but not limited to swales, gutters, pipes, culverts, storm drains, manholes and inlets, together with a perpetual right of ingress and egress thereto.
- According to Colorado law you must commence any legal action based upon any defect in this survey within three years after you first discover such defect. In no event may any action based upon any defect in this survey be commenced more than ten years from the date of the certification shown hereon.
- See Land Title Guarantee Company Inc., Commitment #VC50008014-3 (dated March 31, 2005) for all title information.
- The platted northerly boundary of the plat of West Eagle Addition recorded January 3, 1977 in Book 251 at Page 288 contains errors in the curve data along U.S. Highway 6 & 24, and is apparently based in part on a metes and bounds land description in the deed recorded prior to the plat of West Eagle Addition on June 26, 1974 in Book 235 at Page 286, in which the "southerly right of way fence line of U.S. Highway No's 6 and 24" as it then existed is described as the northerly boundary of the subject property shown hereon. The northerly boundary of Lot 13, Block 40, West Eagle Addition as measured and accepted as a part of this survey of West Eagle Addition, Filing 2 is based on the Annexation Plat, Wastewater Treatment Plant Facility Annexation recorded August 28, 1996 under Reception No. 599898, and the found monumentation perpetuating said Annexation Plat.

LAND DESCRIPTION
(As determined by this survey)

Beginning at a found 2-1/2" diameter aluminum cap properly marked for Corner No. 4 of Tract 47 and stamped "26967 1998" on a 2" aluminum pipe marking Corner No. 4 of Tract 47 and Corner No. 1 of Tract 49, in Section 5, Township 5 South, Range 84 West of the 6th Principal Meridian, Eagle County, Colorado; thence along the 1-6 line of said Tract 49 and the West line of Tract OS11, Eagle Ranch, Filing No. 3 S02°35'09"W, a distance of 84.32 feet to the Northeast corner of Parcel A, Green Acres Mobile Home Park as recorded in Book 442 at Page 348; thence along the North boundary of said Parcel A the following two (2) courses and distances:
1) S86°44'24"W, 100.48 feet;
2) N46°33'16"W, 208.85 feet to the Northwest corner of said Parcel A and the Northeast corner of Parcel B, Green Acres Mobile Home Park, also recorded in Book 442 at Page 348; thence along the North boundary of said Parcel B the following four (4) courses and distances:
1) S85°00'34"W, 68.77 feet;
2) S67°45'34"W, 403.15 feet;
3) N56°42'16"W, 79.00 feet;
4) N77°16'36"W, at 130.93' pass the Northwest corner of Lot 13, Block 40, West Eagle Addition according to the plat thereof recorded in Book 251 at Page 288, continue N77°16'36"W, a total distance of 133.40 feet to a point on the southerly boundary of the U.S. Highway 6 and 24 right of way according to the Annexation Plat, Wastewater Treatment Facility Annexation as recorded at Reception No. 599898; thence along the southerly boundary of the U.S. Highway 6 and 24 right of way and referring all bearings contained herein to said Annexation Plat, the following four (4) courses and distances:
1) N66°51'21"E, 50.42 feet to a found 5/8" rebar and 2" diameter aluminum cap stamped "PE & RLS 23089 Eagle Town Boundary";
2) continue N66°51'21"E, 161.12 feet to a found 5/8" rebar and 2" diameter aluminum cap stamped "PE & RLS 23089 Eagle Town Boundary";
3) 781.04 feet along the arc of a curve to the left having a radius of 5457.35', a central angle of 08°12'00" and a chord which bears N62°45'21"E, 780.37';
4) 246.66 feet along the arc of a curve to the left having a radius of 2152.06', a central angle of 06°34'01" and a chord which bears N55°22'20"E, 246.53'; thence S14°11'25"E, at 3.18' pass the Northeast corner of said Lot 13, Block 40, West Eagle Addition, continue S14°11'25"E and along the West line of Prince Alley (15' wide) as shown on said plat of West Eagle Addition, a total distance of 124.56 feet to a found 5/8" rebar and 1-1/2" diameter aluminum cap stamped "LS 26967"; thence continue along the West line of said Prince Alley the following two (2) courses and distances:
1) S04°55'05"E, 235.10 feet;
2) S78°31'35"E, 15.66 feet to a found 5/8" rebar marking the Northwest corner of Lot 12, West Eagle Addition; thence along the West line of said Lot 12 S04°48'15"E, a distance of 178.59 feet to the Southwest corner of said Lot 12 and a point on the North line of Tract OS6, Eagle Ranch, Filing No. 1; thence along the North lines of Eagle Ranch, Filing No. 1 and Eagle Ranch Filing No. 3 S87°26'57"W, a distance of 278.86 feet to the Point of Beginning, containing 6.993 acres of land more or less.

SURVEYOR'S CERTIFICATE

I, Dana B. Spigener, do hereby certify that I am a registered land surveyor licensed under the laws of the State of Colorado, that this Plat is a true, correct, and complete plat of WEST EAGLE ADDITION, FILING 2 as laid out, platted, dedicated and shown hereon, that such plat was made from an accurate survey of said property by me and under my supervision and correctly shows the location and dimensions of the lots, staked upon the ground in compliance with 38-51-105 C.R.S., and that such plat meets the requirements of 38-33-209 C.R.S., as amended, and all other regulations governing the subdivision of land.

EXECUTED this 26th day of JANUARY, A.D. 2006.

LEGEND

- (P) PLATTED BEARING AND/OR DISTANCE PER PLAT OF WEST EAGLE ADDITION.
- (C) CALCULATED
- 0086 ADDRESS
- FOUND MONUMENT AS DESCRIBED
- FOUND 5/8" RE-BAR AND 2" ALUMINUM CAP "PE & RLS #23089" EAGLE TOWN BOUNDARY
- FOUND 5/8" RE-BAR (NO CAP)
- FOUND 1-1/2" ALUMINUM CAP "LS 26967" ON 5/8" REBAR
- SET 2" ALUMINUM CAP "LS 33655" ON 5/8" REBAR
- △ SET 1-1/2" ALUMINUM CAP DRILLED INTO CONCRETE "LS 33655"

PARKING SUMMARY TABLE

	REQ'D (PARKED AT UNITS)
(2) 3 BEDROOM DUPLEX UNITS @ 3 / UNIT = 6 (8)	
(35) 2 BEDROOM UNITS @ 2 / UNIT = 70 (70)	
(5) 1 BEDROOM UNITS @ 1.5 / UNIT = 8 (5)	
PLUS 1 SPACE PER 6 DWELLING UNITS = 7	
TOTAL = 91 (83)	
8 SPACES REQUIRED IN ADDITION TO PARKING AT UNITS	
(2) HANDICAP	
(3) FISHING	
(9) NOT ADJACENT TO UNITS	

HIGHWAY 6 ACCESS TO THE PROJECT WILL INCLUDE A SEPARATE SET OF CDDT PLANS AND APPROVAL

INSTALL 2FT WIDE THERMOPLASTIC STOP BAR (MILLED IN ASPHALT)

RELOCATE EXISTING GUARDRAIL TO TERMINATE WITH FLARED END SECTION

SEE VIEWPORT ABOVE FOR ALTERNATIVE

CONSTRUCT 1' DEEP DRAINAGE SWALE

CONSTRUCT 2' CONCRETE PAN

CONSTRUCT 2' WIDE CONC. WALK

CONSTRUCT BOULDER WALL (TYP)

CONSTRUCT 2' CONCRETE PAN

 HORIZ: 1" = 30'
 VERT: 1" = 30'

- GENERAL NOTES:
1. STORM SEWER STRUCTURE TYPES REFER TO THE COLORADO DEPARTMENT OF TRANSPORTATION M & S STANDARDS. CDOT STANDARD SPECIFICATIONS, OR ARE INCLUDED ON THE DETAIL SHEETS.
 2. STORM SEWER ELEVATIONS SHOWN ARE AT PIPE INVERT UNLESS OTHERWISE SPECIFIED.
 3. PIPE LENGTHS INDICATED ARE SLOPE LENGTHS MEASURED ALONG THE CENTERLINE OF PIPE FROM INSIDE FACE OF INLET (OR MANHOLE) TO INSIDE FACE OF INLET (OR MANHOLE).
 4. PIPE LENGTHS FOR LAST RUN AT OUTFALLS DO NOT INCLUDE FLARED END SECTIONS.
 5. MAINTENANCE FACILITIES NEED TO BE PERIODICALLY INSPECTED AND STORM SEWER STATIONING IS CORRELATED TO THE CENTERLINE OF STORM SEWER PIPE AND THE CENTER OF INLET BOXES OR MANHOLES.
 6. INSTALL ALL GAS AND ELECTRIC SERVICES AND MAINS ABOVE STORM SEWERS EXCEPT WHERE NOTED. IF A CONFLICT EXISTS INSTALL SHALLOWS BELOW STORM SEWER.
 7. PROVIDE MIN. 18" VERTICAL SEPARATION BETWEEN STORM SEWER AND ANY OTHER UTILITY LINE PER PIPE LABELED HOPE. USE PVC SR-35 PIPE FOR 8" AND SMALLER DIAMETER STORM.
 8. BLANKET (LANDLICK OR EXHAUSTOR OR APPROVED EQUAL)
 9. REPAIR OUTLET WITH PROTECTION

SYLVAN LAKE CIRCLE
EAGLE, CO
EROSION CONTROL PLAN

NO.	DATE	REVISIONS	BY
	05/20/2016	DEVELOPMENT PERMIT	MCW

GENERAL NOTES FOR SEDIMENT CONTROL

- CONTRACTOR SHALL SUBMIT A CONSTRUCTION STAGING & MANAGEMENT PLAN IDENTIFYING CONSTRUCTION FENCING, STAGING, STORAGE & CONSTRUCTION TRAILER LOCATION PRIOR TO COMMENCEMENT OF CONSTRUCTION ACTIVITIES.
- INSTALL AND MAINTAIN SEDIMENT CONTROL MEASURES IN ACCORDANCE WITH THESE PLANS AND AS NEEDED TO PREVENT SEDIMENT FROM DISCHARGING OFF-SITE.
- ALL PROPOSED SEDIMENT CONTROL MEASURES ARE TEMPORARY MEASURES UNLESS SPECIFIED OTHERWISE ON PLANS.
- SEDIMENT CONTROL MEASURES MAY REQUIRE FIELD ADJUSTMENTS AT THE TIME OF CONSTRUCTION TO INSURE THAT THEIR INTENDED PURPOSE IS ACCOMPLISHED.
- PROVIDE REGULAR INSPECTION AND MAINTENANCE OF ALL SEDIMENT CONTROL MEASURES TO INSURE THAT SEDIMENT CONTROL EFFICIENCY IS OBTAINED UNTIL FINAL STABILIZATION OF SITE HAS TAKEN PLACE.
- INSTALL SEDIMENT CONTROL MEASURES AT THE ONSET OF GRADING OPERATIONS SO THAT EFFECTIVE SEDIMENT CONTROL CAN BE ACHIEVED DURING THE ENTIRE CONSTRUCTION PERIOD.
- STABILIZE ALL POINTS OF INGRESS AND EGRESS WITH CRUSHED STONE DURING CONSTRUCTION TO PREVENT TRACKING OF MUD ONTO PUBLIC WAYS.
- FOR TEMPORARY STOCKPILES APPLY SEED, HYDROMULCH AND TACKIFIER IMMEDIATELY AFTER THEY ARE CONSTRUCTED FOR STABILIZATION. IF EROSION OCCURS AFTER APPLICATION OF THE TACKIFIER, USE EXCELSIOR C2 EROSION CONTROL FABRIC. INSTALL SILT FENCE BELOW STOCKPILES TO CAPTURE SEDIMENT.
- THE TERM "REVEGETATION" ON THIS PLAN MEANS THE SUCCESSFUL GERMINATION AND ESTABLISHMENT OF STABLE GRASS COVER FROM A PROPERLY PREPARED SEEDBED CONTAINING THE SPECIFIED AMOUNTS OF FERTILIZER IN ACCORDANCE WITH APPLICABLE STANDARDS AND SPECIFICATIONS. REFER TO LANDSCAPE PLANS FOR SEED MIX, FERTILIZER TYPE, MULCH, TACKIFIER AND APPLICATION RATES.
- IT IS THE CONTRACTOR'S RESPONSIBILITY TO TAKE APPROPRIATE MEASURES TO INSURE THAT NO SEDIMENT LADEN WATER IS DISCHARGED FROM THE SITE.
- IF STABILIZATION OF DISTURBED AREAS IS TO BE ACCOMPLISHED DURING THE MONTHS OF OCTOBER THROUGH APRIL, THE STABILIZATION SHALL CONSIST OF MULCHING, SEED AND MULCH AS SOON AS THE SEASON PERMITS.
- APPROVAL SHALL BE REQUESTED UPON FINAL STABILIZATION OF ALL SITES BEFORE REMOVAL OF SEDIMENT CONTROLS.
- CONTRACTOR SHALL OBTAIN AND CONFORM TO STORMWATER DISCHARGE PERMIT AND ALL ENVIRONMENTAL PERMITS AND KEEP STREETS CLEAN AND FREE OF SEDIMENT.
- REMOVAL AND CLEANUP OF ANY SEDIMENT THAT LEAVES THE SITE IS THE RESPONSIBILITY OF THE CONTRACTOR

CONSTRUCTION SEQUENCE OF EROSION/SEDIMENT CONTROL MEASURES

- BEFORE COMMENCING GRADING OR CONSTRUCTION
- CONSTRUCT STABILIZED CONSTRUCTION ENTRANCES AT ALL POINTS OF INGRESS AND EGRESS.
 - CONTRACTOR SHALL TAKE APPROPRIATE MEASURES TO ASSURE THAT NO SEDIMENT LEAVES THE SITE.
 - CONSTRUCT SILT FENCE AND WATTLES AND ALL SEDIMENT CONTROL DEVICES.
 - BEGIN DEMOLITION, EXCAVATION AND CONSTRUCTION.
 - INSTALL EROSION CONTROL MEASURES AFTER DITCHES AND SWALES HAVE BEEN CONSTRUCTED AND TOPSOIL AND SEED HAVE BEEN PLACED. INSTALL INLET PROTECTION IN ALL INLETS AS THEY ARE CONSTRUCTED.
 - TOPSOIL AND REVEGETATE ALL DISTURBED AREAS WITH APPROVED SEED MIX PER LANDSCAPE PLAN.
 - CONTRACTOR SHALL REMOVE SEDIMENT CONTROL FACILITIES AFTER FINAL STABILIZATION.

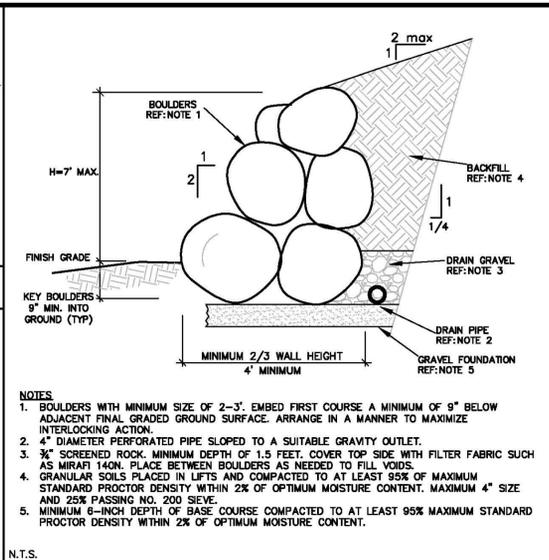

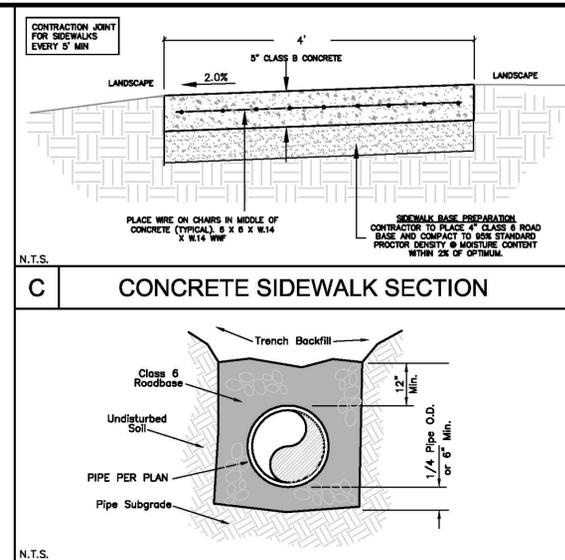

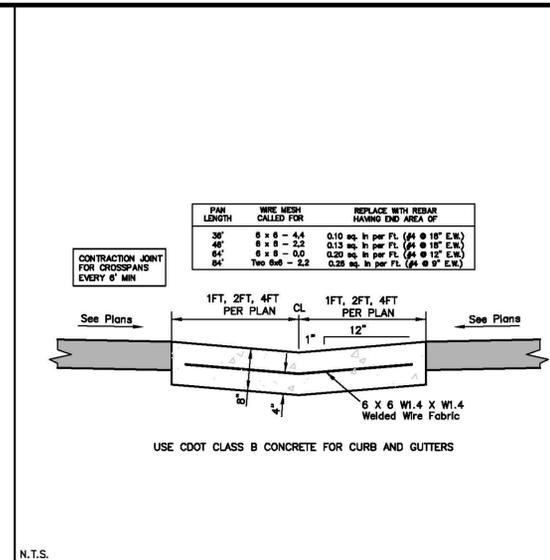

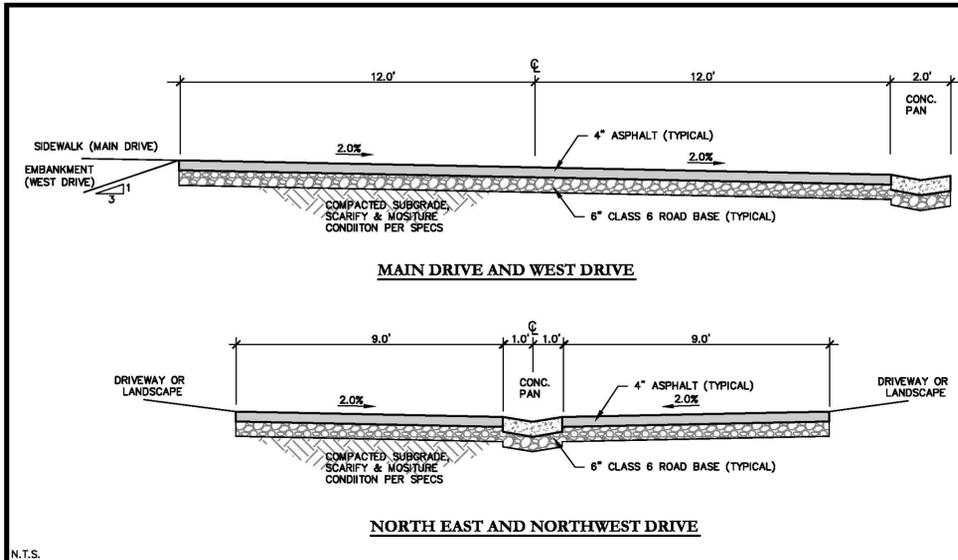

FUGITIVE DUST CONTROL

- THE CONTRACTOR IS RESPONSIBLE TO CONTROL FUGITIVE DUST AND TO INCORPORATE THE FOLLOWING:
- ALL UNPAVED ROADS AND OTHER DISTURBED AREAS ON SITE SHALL BE WATERED TO MINIMIZE FUGITIVE DUST.
 - HAUL ROADS SHALL BE TREATED WITH MAGNESIUM CHLORIDE IF WATER IS NOT CONTROLLING THE DUST.
 - ALL DISTURBED SURFACE AREAS SHALL BE REVEGETATED AS SOON AS POSSIBLE.
 - MUD AND DIRT CARRYOUT ONTO PAVED SURFACES SHALL BE PREVENTED. ANY MUD AND DIRT CARRYOUT ONTO PAVED SURFACES SHALL BE CLEANED UP DAILY.

LEGEND

- STABILIZED CONSTRUCTION ENTRANCE
- EROSION LOG PROTECTION AND SILT SACK AT AREA INLET
- EROSION LOG WATTLE
- BEAVER DAM INLET PROTECTION AND SILT SACKS AT CURB INLET
- STRAW DITCH WATTLE

Town of Eagle Water Specs

- Ductile Iron Pipe - CL 52 AWWA C151 350 psi with conductivity straps or use of brass wedges and 10 gauge tracer wire installed.
- Fittings - Ductile Iron AWWA C153 350psi MJ joints AWWA C111.
- Joint Restraint - E6AA Iron Mega Lug Series 1100 or 1700 accepted equal.
- Gate Valves - Mueller A - 2360 or U.S. Pipe Metro Seal 250 R.S. Resilient wedge gate valves up to and including 12" (AWWA C509).
- Butter Fly Valves - Mueller Lineseal III Epoxy coated or Pratt "Groundhog" buried service rubber seated, Epoxy coated. AWWA C504 Class 150 B 14" and larger. 3211-23 Mechanical Joint Ends (without mechanical joint accessories)
* High Pressure Zone Mueller Lineseal XPII, Class 250 B 14" and larger. 5227-23 Mechanical Joint Ends (without mechanical joint accessories)
- Valve Boxes - Tyler 6850 Series or equal 5 3/4" lid.
- Fire Hydrants - Mueller Super Centurion A423 5 1/2" main valve opening. Extensions will not be allowed during the first year. After that, only one (1) extension is allowable (maximum 48-inches).
- Tapping Sleeves - ROMAC SST III stainless steel tapping sleeve or approved equal.
- Service Saddles - Mueller BR2 Series or approved equal (Bronze).
- Corporation Stops - Mueller B25008 or approved equal.
- Curb Stops - Mueller B25209 or approved equal. For sizes up to 1.5-in: Mueller H10314 with rod various heights or approved equal. H10334 in concrete or asphalt. 1.5-in and larger: Mueller H-10336
- Service Filling - Mueller 110 or approved equal.
- Pressure Reducing Valves - Main line - Pressure Reducing Valve shall be: CLA - VAL 90-01 or 690-01. Combination Pressure Reducing & Pressure Sustaining Valve shall be: CLA - VAL 92-01 or 692-01.
- Copper Tubing - 3/4" Line - Type K Copper
1" Line - Type K Copper
2" Line - Type K Copper
- Polyethylene Service Line Tubing (Pure-Core or Approved Equal) - 3/4" not allowed due to the minimum requirement of 3/4" ID diameter 1" to 2" SDR9 meeting the requirements of ASTM D 2737 and AWWA C901 and ANSI/NSF standard 61. (Pure - Core) with tracer wire with 10 gauge tracer wire (insulated)
- Air Vac Valves - 2-in APCO 144 or VALMATIC 202C.2.
- Polyethylene Encasement - ANSI / AWWA C105 / A21.5-93 or most current revision. Low density polyethylene Film .008" - 8 mil.
- Water Main Pipe diameter size should be 8-inch, 12-inch, 16-inch, 20-inch, and 24-inch.

A2.4

NOTES:

1. ALL LANDSCAPE AREAS ARE TO HAVE IMPORTED TOPSOIL TO A DEPTH OF 12" AND SOIL PREPARATION TILLED INTO ROUGH GRADES TO A DEPTH OF 6 INCHES. MINIMUM RATE OF 4 CUBIC YARDS OF ORGANIC MATTER PER 1000 SQUARE FEET.
2. ALL UTILITY EASEMENTS SHALL REMAIN UNOBSTRUCTED AND FULLY ACCESSIBLE ALONG THEIR ENTIRE LENGTH FOR MAINTENANCE EQUIPMENT ENTRY.
3. THE DEVELOPER, HIS SUCCESSORS AND ASSIGNS, SHALL BE RESPONSIBLE FOR INSTALLATION, MAINTENANCE AND REPLACEMENT OF ALL LANDSCAPING MATERIALS SHOWN OR INDICATED ON THE APPROVED SITE PLAN OR LANDSCAPE PLAN ON FILE IN THE PLANNING DEPARTMENT. ALL LANDSCAPING SHALL BE INSTALLED AS DELINEATED ON THE PLAN, PRIOR TO THE ISSUANCE OF CERTIFICATE OF OCCUPANCY.
4. ALL LANDSCAPED AREAS AND PLANT MATERIAL MUST BE WATERED BY AN AUTOMATIC UNDERGROUND IRRIGATION SYSTEM. IRRIGATION SYSTEM DESIGN, INSTALLATION, OPERATION, AND MAINTENANCE SHALL CONFORM TO THE REQUIREMENTS FOUND IN THE CITY OF EAGLE DEVELOPMENT STANDARDS.
5. ALL PLANTING BED AREAS ARE TO BE MULCHED WITH 3" DEPTH SHREDDED CEDAR MULCH (GORILLA HAIR). WEED BARRIER FABRIC IS REQUIRED IN SHRUB BEDS ONLY - DO NOT PLACE FABRIC IN PERENNIAL BEDS.
6. ALL TREES ARE TO BE STAKED AND GUYED PER DETAILS FOR A PERIOD OF ONE YEAR.
7. DO NOT DISTURB EXISTING PAVING, LIGHTING, LANDSCAPE OR IRRIGATION THAT EXISTS ADJACENT TO THE SITE UNLESS OTHERWISE NOTED ON THE PLANS.
8. ALL PLANT MATERIAL SHALL MEET SPECIFICATIONS OF THE AMERICAN ASSOCIATION OF NURSERYMEN (AAN) FOR NUMBER ONE GRADE. ALL TREES SHALL BE BALLED AND BURLAPPED OR EQUIVALENT. ALL PLANT MATERIALS SHALL HAVE ALL WIRE, TWINE OR OTHER CONTAINMENT MATERIALS, EXCEPT FOR BURLAP, REMOVED FROM TRUNK AND ROOT BALL OF THE PLANT PRIOR TO PLANTING.
9. GRADES SHALL BE SET TO ALLOW FOR PROPER DRAINAGE AWAY FROM STRUCTURES. GRADES SHALL MAINTAIN SMOOTH PROFILES AND BE FREE OF SURFACE DEBRIS, BUMPS, AND DEPRESSIONS.
10. OWNERS SHALL ENSURE THAT THE LANDSCAPE PLAN IS COORDINATED WITH THE PLANS DONE BY OTHER CONSULTANTS SO THAT THE PROPOSED GRADING, STORM DRAINAGE, OR OTHER CONSTRUCTIONS DOES NOT CONFLICT NOR PRECLUDE INSTALLATION AND MAINTENANCE OF LANDSCAPE ELEMENTS ON THIS PLAN.
11. ALL SHRUB BEDS ADJACENT TO TURF AREAS SHALL BE EDGED WITH RYERSON OR APPROVED EQUIVALENT STEEL EDGER.
12. PRIOR TO INSTALLATION OF PLANT MATERIALS, AREAS THAT HAVE BEEN COMPACTED OR DISTURBED BY CONSTRUCTION ACTIVITY SHALL BE THOROUGHLY LOOSENEED; ORGANIC SOIL AMENDMENTS SHALL BE INCORPORATED AT THE RATE OF AT LEAST FOUR (4) CUBIC YARDS PER 1000 SQUARE FEET OF LANDSCAPE AREA.
13. CONTRACTOR SHALL VERIFY ALL MATERIAL QUANTITIES PRIOR TO INSTALLATION. ACTUAL NUMBER OF PLANT SYMBOLS SHALL HAVE PRIORITY OVER THE QUANTITY DESIGNATED.
14. REFER TO THE CIVIL ENGINEER DRAWINGS FOR GRADING AND UTILITY INFORMATION. GRADING AND UTILITY INFORMATION SHOWN ON THE LANDSCAPE PLAN IS FOR REFERENCE ONLY.

CC/CCS25
25' Arm Mounted, Curvilinear, PicoPrism™ LED
8/22/14 • kl_cc25plpld_spec.pdf

Approvals:
Date: Page: 1 of 6

Housing: Spun aluminum. (Rollformed linear reveals; CC: Three equally spaced reveals, 1/2" wide, separated by 1/2" ribs, 1/2" deep. CCS: One 1/2" groove, 1/2" deep.) Sidewalls have a maximum 1" of taper, and are free of welds or fasteners. A rollformed aluminum flange is hemmed into the bottom providing support for the optical module. An internal aluminum casting provides for mounting of the electrical module plus reinforcing for side-arm mounting of the fixture.
Frame Assembly: One-piece cast aluminum frame is attached to the housing by a zinc plated cold rolled steel hinge with a stainless steel pin. Closure is by four self-retained stainless steel screws. A stainless steel self-locking stop arm is provided to hold the frame in the open position while servicing.
Standard Arm Mounting: Arm is one-piece extruded aluminum with internal bolt guides and fully radiused top and bottom. Luminaire-to-pole attachment is by internal draw bolts, and includes a pole reinforcing plate with wire strain relief. Arm is circular cut to mate with specified round pole.
Electronic Module: All electrical components are UL and CSA recognized, mounted on a single plate and factory prewired with quick-disconnect plugs. Module includes a driver, thermal control device and surge protector. Electrical module attaches to housing with no-tool hinges and latches. Driver is rated for -40°F starting and has a 0-10V dimming interface for multi-level illumination options.
Optical Module: Precision, IP66 replaceable PicoPrisms are positioned to achieve directional control toward desired task. The entire light engine fastens to the housing as a one-piece module.
Dimming: Driver has a 0-10V dimming interface with a dimming range of 10-100%. Approved dimmers include Lutron Diva AVTV, Lutron Nova NTV and NTFV. Note: Not compatible with current sourcing dimmers.
Listed to: UL 1598 Standard for Luminaires - UL 8750 Standard for Safety for Light Emitting Diode (LED) Equipment for use in Lighting Products and CSA C22.2-425.0 Luminaires. RoHS compliant. Meets Buy American provisions within ARRA.
Finish/Color: Finish is Super TGIC thermoset polyester powder coat paint, 2.5 mil nominal thickness, applied over a titanium zirconium conversion coating; 5000 hour salt spray test endurance rating. Standard colors are Black, Dark Bronze, Light Gray, Stealth Gray™, Platinum Silver, or White. Custom colors are available.
Warranty: Kim Lighting warrants Curvilinear LED products ("Products") sold by Kim Lighting to be free from defects in material and workmanship for (i) a period of five (5) years for metal parts, (ii) a period of ten (10) years for exterior housing paint finishes, (iii) a period of six (6) years for LED Light Engines (PicoPrisms) and, (iv) a period of five (5) years for LED power components (LED Driver, Lifeshield temperature control device, surge protector), from the date of sale of such goods to the buyer as specified in Kim Lighting shipping documents for each product.
Caution: Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

KIM LIGHTING RESERVES THE RIGHT TO CHANGE SPECIFICATIONS WITHOUT NOTICE.

DESCRIPTION
The Galleon™ LED luminaire delivers exceptional performance in a highly scalable, low-profile design. Patented, high-efficiency AccuLED Optics™ system provides uniform and energy conscious illumination to walkways, parking lots, roadways, building areas and security lighting applications. IP66 rated and UL-eUL Listed for wet locations.

SPECIFICATION FEATURES
Construction
Extruded aluminum driver enclosure thermally isolated from Light Squares for optimal thermal performance. Heavy-wall, die-cast aluminum end caps enclose housing and die-cast aluminum heat sinks. A unique, patent pending interlocking housing and heat sink provides scalability with superior structural rigidity, 3G vibration tested. Optional tool-less hardware available for ease of entry into electrical chamber. Housing is IP66 rated.
Optics
Patented, high-efficiency injection-molded AccuLED Optics technology. Optics are precisely designed to shape the distribution maximizing efficiency and application spacing. AccuLED Optics create consistent distributions with the scalability to meet customized application requirements. Offered standard in 4000K (+/- 275K CCT 70 CRI), Optional 5000K CCT and 3000K CCT.
Electrical
LED drivers are mounted to removable tray assembly for ease of maintenance. 120-277V 50/60Hz, 347V 60Hz or 480V 60Hz operation. 480V is compatible for use with 480V Wye systems only. Standard with 0-10V dimming. Shipped standard with Eaton proprietary circuit module designed to withstand 10kV of transient line surge. The Galleon LED luminaire is suitable for operation in -40°C to 40°C ambient environments. For applications with ambient temperatures exceeding 40°C, specify the HA (High Ambient) rated. Greater than 90% lumen maintenance expected at 50,000 hours. Available in standard 1A drive current and optional 530mA and 700mA drive currents.
Mounting
STANDARD ARM MOUNT: Extruded aluminum arm includes internal bolt guides allowing for easy positioning of fixture during assembly. When mounting two or more luminaires at 90° and 120° apart, the EA extended arm may be required. Refer to the arm mounting requirement table.
Round pole adapter included. For wall mounting, specify wall mount bracket option. 3G vibration rated. QUICK MOUNT ARM: Arm is bolted directly to the pole and the fixture slides onto the quick mount arm and is secured via a single fastener, facilitating quick and easy installation. The versatile, patent pending, quick mount arm accommodates multiple drill patterns ranging from 1-1/2" to 4-7/8". Removal of the door on the quick mount arm enables wiring of the fixture without having to access the driver compartment. A knock-out enables round pole mounting.
Finish
Housing finished in super durable TGIC polyester powder coat paint, 2.5 mil nominal thickness for superior protection against fade and wear. Heat sink is powder coated black. Standard colors include black, bronze, gray, white, dark platinum and graphite metallic. RAL and custom color matches available.
Warranty
Five-year warranty.

Number of Light Squares	"A" Width	"B" Standard Arm Length	"B" Optional Arm Length	Weight with Arm (lbs.)	EPA with Arm (Sq. Ft.)

DESCRIPTION
The McGraw-Edison BSL / BRL Bollard Series, available in heights from 24" to 42", has crisp, clean lines which blend with any architectural setting. Constructed of seamless, heavy-duty aluminum and finished with a tough polyester powder coat finish, the McGraw-Edison Leveled Bollard Series is gasketed to seal out external contaminants. U.L. 1598 listed and CSA certified for wet locations.

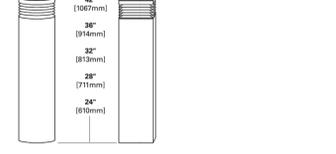

Bollards are designed for walkways, entranceways, drives and other small-area lighting applications where low mounting heights are desirable.

SPECIFICATION FEATURES
Construction
TOP: Rugged, minimum 5/32" thick cast aluminum top cap secured via a concealed stainless steel allen screw with twist removal mechanism for lamp access. Flow through ventilation assure cool to the touch top. LOUVERS: Cast Aluminum Louver blades provide sharp cutoff delivering no direct light above 90°. Louvers are secured to the shaft via tamper stainless steel rods and fasteners.
LOWER HOUSING: Nominal 1/8" thick aluminum extruded housing. Bollard housing is secured to the base with flathead, counter-sunk screws for smooth, uncluttered appearance. BASE: Rugged cast aluminum. Completely concealed.
Electrical
HID High Power Factor ballast for 20°F starting. CFL Electronic ballast for 0°F starting. Product is factory mounted to the base. Quick disconnects provided between lamp and electrical assembly. Metal Halide and High Pressure Sodium lamp sources up to 100W and up to 42W Compact Fluorescent sources and polycarbonate/PBT GX24q-3/q-4 base for compact fluorescent lamps.
Mounting
Base mounts onto foundation with three (3) 1/2" x 12 1/2" anchor bolts on a 8" Dia. bolt circle (a centrally located 2 7/8" x 3 1/2" wire entrance opening provided).
Finish
Premium fade and abrasion resistant TGIC Polyester Powder Coat Finish. Standard colors are Black, Grey, Bronze, White, Dark Platinum and Graphite Metallic. Other finish colors available including all RAL matches.

Lamp Type	Wattage
Pulse Start Metal Halide (MPH)	50, 70, 100W

GREATER EAGLE FIRE PROTECTION DISTRICT

P.O. Box 961 • Eagle, Colorado 81631 • (970) 328-7244 • Fax - (970) 328-7280

~~TO: Gary Brooks~~

Alpine Engineering, Inc.
34510 Highway 6, Unit A-9
Edwards, CO 81632

RE: Sylvan Lake Circle Support

Mr. Brooks,

The Greater Eagle Fire Protection District would like to offer its support and approval of the Sylvan Lake Circle project that is proposed in Eagle, Colorado. The district feels that this project is well suited for the Town of Eagle and will be a great addition to our district, our town, and our citizens. The district would like to state the importance of having two access points for this project, one access point on Sylvan Lake Road and one access point on US Highway 6. If the project is constructed, incorporating access points off both Sylvan Lake Road and US Highway 6 would be beneficial to the residents of this project by reducing response times and allowing better access for responding emergency vehicles. A second access point also allows neighboring fire districts that respond to mutual aid calls easier access to the future residents of this housing community. A second ingress/egress point on this project would allow vehicles to use an alternate access point and reduce the amount of vehicle traffic that could potentially disrupt our response to an emergency. Multiple access points removes the potential of a single access point closure and does not limit the residents' abilities to leave the property. Two access points allows the communities residents the ability to leave the property during an emergency, opposite where an access point could be closed. The district also feels that having the ability to make a left turn into this project from US Highway 6 is very important. Allowing a soft lane barrier, in which a fire apparatus could make a left turn from US Highway 6 and enter the property would be beneficial. This would allow for a quicker response, more efficient use of the roadway for responding emergency vehicles, and the ability for the district to better serve our future citizens. We look forward to working with you on this project.

Respectfully,

Kurt Vogel, MBA, CFO

Fire Chief

Greater Eagle Fire Protection District

Statement of Engineering Qualifications

Kari J. McDowell Schroeder, PE, PTOE is a Transportation and Traffic Engineer for McDowell Engineering, LLC. Ms. McDowell Schroeder has over nineteen years of extensive traffic and transportation engineering experience. She has completed numerous transportation studies and roadway design projects throughout the State of Colorado. Ms. McDowell Schroeder is a licensed Professional Engineer in the State of Colorado and has her certification as a Professional Traffic Operations Engineer from the Institute of Transportation Engineers.

1.0 Project Description

McDowell Engineering has prepared this Transportation Impact Study for the proposed Sylvan Lake Circle residential development located in Eagle, Colorado. The purpose of this study is to forecast and analyze the impacts of the additional traffic volumes associated with the proposed project. Recommendations to mitigate any traffic impacts are also included. The analysis complies with the Town of Eagle standards.

The applicant is proposing to construct 42 townhome residential dwelling units on the 4.7-acre site. The project is planned for construction to start in Summer 2016, with full occupancy in Year 2017.

The project is located at 58 Sylvan Lake Road on the south side of Grand Avenue and west of the Sylvan Lake Road. Refer to the Area Map in **Figure 1**. The proposed access locations are depicted in the site plan - **Figure 2**. The access onto Grand Avenue (US 6) will be restricted to right-in, right-out only movements. The Sylvan Lake Road access will be full movement.

Figure 1: Area Map

1.1 Traffic Study Scope

This traffic study evaluates peak hour traffic operations at the following intersections:

- Grand Avenue (US 6) & Sylvan Lake Road
- Grand Avenue (US 6) & North Site Access
- Sylvan Lake Road & East Site Access

The traffic study scope was reviewed with Town of Eagle staff prior to the completion of this study. The Traffic Study Scoping Form can be found in the **Appendix**.

2.0 Existing Conditions

2.1 Description of Existing Transportation System

Grand Avenue (US 6) is a two-lane, paved highway through Eagle. It connects to the communities of Gypsum/Dotsero to the west and Edwards/Avon to the east. US 6 is currently a State Highway. It is classified as a NR-B highway, non-rural arterial and access to the roadway is controlled by an Access Management Plan. The posted speed limit of Grand Avenue is 45mph at the site access.

However, CDOT and the Town of Eagle are currently in the devolution process for US 6. This includes the entire frontage abutting the Sylvan Lake Circle property. The roadway is anticipated to be turned over to the Town in October 2016.

Sylvan Lake Road connects Grand Avenue (US 6) to Brush Creek Road, extending through the Eagle Ranch commercial area. In the vicinity of the project site, it is a two-lane, paved collector street with a posted speed limit of 35mph. The roadway section is wider in the Eagle Ranch commercial area to accommodate on-street parking. The intersection of US 6 is controlled by a roundabout.

2.2 Project Access

The site is currently accessed from Sylvan Lake Road approximately 240-feet south of the Sylvan Lake Road roundabout.

The applicant is proposing the following access scenarios:

Interim Access: Prior to the devolution of Grand Avenue (US 6), the site's access to the roadway network includes an emergency-only access to Grand Avenue located approximately 250-feet west of the Sylvan Lake Road roundabout (north site access) and a full movement access to Sylvan Lake Road located approximately 360-feet south of the Sylvan Lake Road roundabout (east site access). The emergency access to Grand Avenue is intended to serve the Greater Eagle Fire Protection District¹² and other emergency vehicles only. Access restrictions will prevent vehicle traffic from using the emergency access but will allow the Fire District access in the event of an emergency.

Future Access: Future access to the site includes a right-in / right-out (RIRO) access to Grand Avenue located approximately 250-feet west of the Sylvan Lake Road roundabout (north site access) and a full movement access to Sylvan Lake Road located approximately 360-feet south of the Sylvan Lake Road roundabout (east site access).

The interim and future access configurations are being proposed to address the request of the Greater Eagle Fire Protection District for access to Grand Avenue in the short term. Once devolution has passed access control responsibilities from CDOT to the Town of Eagle, the applicant would request that the emergency access is converted to a RIRO access.

2.3 Traffic Data Collection

Traffic data was collected at the Grand Avenue (US 6) & Sylvan Lake Road / Violet Lane in late September and early October of 2015.

Turning movement counts were collected from 7:00 – 9:00am and 4:00 – 6:00pm on a weekday and from 11:00am – 1:00pm on a Saturday. School was in session.

There was construction activity on the Brush Creek Bridge, west of the US 6/Sylvan Lake Road roundabout throughout the count period. However, a fully functioning and traffic-controlled temporary bridge was in place. Therefore, the traffic data collected is considered accurate.

There were mountain bike events in the Town of Eagle on the Saturday that was counted. However, similar sporting events occur frequently in the Town, and are considered typical weekend traffic.

3.0 Future Traffic Projections

3.1 Background Infrastructure Assumptions

There are several developments in the Eagle area that have been approved or are seeking approval that will add traffic to the roadway network in the future.

Haymeadow Development

The Haymeadow Development, located southeast of the Eagle Pool and Ice Rink, has been approved but construction has not yet begun. The Haymeadow Development will consist of a total of 837 units (not including Accessory Dwelling Units). This will include a mix of condominiums, townhomes, duplexes and single family homes (344 multi-family units and 493 single family/duplex units).

Frost Creek Development

Changes to the existing Frost Creek development are currently being considered by Eagle County. The development is asking for increasing the approved units from 98 to 142 single family residences and increase the number of guest cabins from 5 to 20.

JHY Parcel Development

Development of the JHY Property is currently being considered by the Town of Eagle. This Development would construct 100,000sf of commercial property and 300 residential dwelling units on the 30-acre site. In lieu of the commercial development an additional 100 residential units could be considered.

It is anticipated that by the year 2035 improvements to the Eagle road network will be made. Some of the improvements anticipated are:

- Brush Creek Road Extension
- Brush Creek Road & Sylvan Lake Road Improvements
- Grand Avenue Capacity Improvements
- Sylvan Lake Road Improvements

These improvements are described in detail in the Town of Eagle's *West Eagle Sub Area Plan*³ and in the *Haymeadow Traffic Study*⁴.

3.2 Background Traffic Growth

Year 2017 Background Traffic:

CDOT's published 20-year growth factor⁵ of 1.81 for US 006E at Milepost 148.6. This equates to an annual growth rate of 3.01% on Grand Avenue (US 6) which was used to forecast 2017 background traffic on Grand Avenue.

In addition, a 2.28% growth rate was used to forecast the Sylvan Lake Road traffic based upon the current volumes and the Town's Year 2035 traffic model volumes. A 2.00% growth rate was used on Sylvan Lake Road turning movements into the Grand Avenue / Sylvan Lake Road roundabout for forecasting 2017 background traffic.

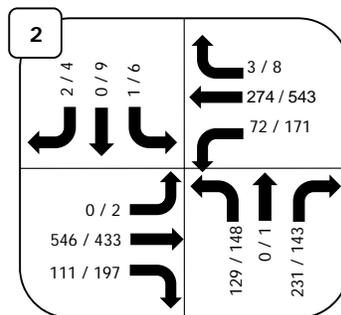

Year 2035 Background Traffic:

Based upon initial scoping with the Town, the Year 2035 has been selected as the long term planning horizon for this study. The Town of Eagle has a well-developed traffic forecasting matrix for the Brush Creek Valley. The *Projected Brush Creek Growth Model*⁶ was updated by the Town in November of 2015 to reflect the anticipated future growth and buildout rates along Brush Creek Road. The Town's updated model was used to analyze the Year 2035 long-term impacts on the roadway network.

In addition to the Town's *Projected Brush Creek Growth Model*⁶, the proposed traffic from three developments is included in the background traffic projections. The Haymeadow development's anticipated traffic, the additional expansion of Frost Creek, and the proposed JHY development are included in this analysis.

The resulting Year 2015 existing traffic volumes can be found in **Figure 3**. Year 2017 and Year 2035 background traffic volumes can be found in **Figure 4** and **Figure 5**, respectively.

4.0 Project Traffic

4.1 Trip Generation for Proposed Land Use

The applicant is proposing to construct 42 residential townhome units on the property. The Institute of Transportation Engineers' *Trip Generation Manual*⁸ data for land use #230, Residential Condominium / Townhouse was used to determine the anticipated trip generation for the proposed development.

A five percent multimodal reduction was applied due to the close proximity of ECO Transit's Sylvan Lake Road bus stop which is located approximately 260-feet east of the Sylvan Lake Road roundabout. It is recommended that the project include the necessary site improvements to provide connectivity from the site to the adjacent bicycle and pedestrian facilities, as well as the bus stop.

Project Trip Generation

Based on Figure 3.1 of ITE's *Trip Generation Handbook*, fitted curve calculations were used to determine trip generation for the proposed project.

Based upon the applicant's proposed land use and a 5% multimodal trip reduction, the project can be anticipated to generate 288 vehicle trips per day (vpd) on the average weekday. Peak hour traffic on a weekday at project buildout is anticipated to be 25 vehicles per hour (vph) during the morning peak hour, 49 vph during the evening peak hour.

Refer to **Table 1** for trip generation calculations for the proposed development.

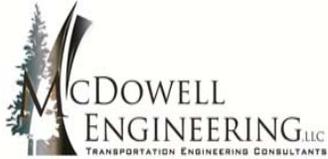

Table 1 - Project Trip Generation

Total					288		5		20		31		18

¹ Values obtained from *Trip Generation Manual, 9th Edition*, Institute of Transportation Engineers, 2012.

² Dwelling Units

4.2 Directional Distribution

The distribution of project-generated vehicular traffic on greater roadway network is influenced by several factors including the following:

- The location of the site relative to other facilities and the roadway network
- The configuration of the existing and proposed adjacent roadway network
- Relative location of neighboring population and employment centers

Therefore, it is anticipated that site generated traffic will have the following origins and destinations:

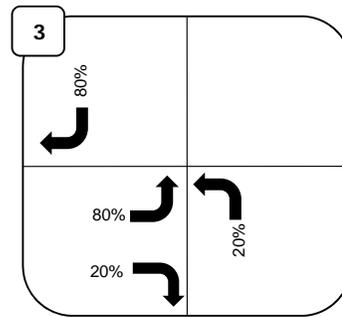

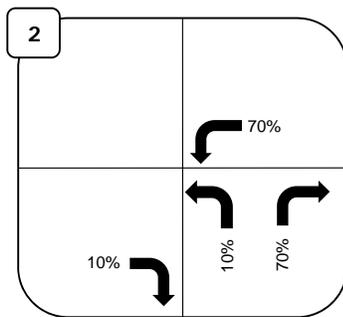

- Grand Avenue (US 6) west of Sylvan Lake Road = 10%
- Grand Avenue (US 6) east of Sylvan Lake Road = 70%
- Sylvan Lake Road = 20%

The anticipated directional distribution of project-generated traffic is depicted in **Figure 6a** for the interim access condition and **Figure 6b** for the future access condition. Distribution is not anticipated to change from Year 2017 to Year 2040.

Figure 6a: Directional Distribution - Interim Access

4.3 Traffic Assignment and Total Traffic

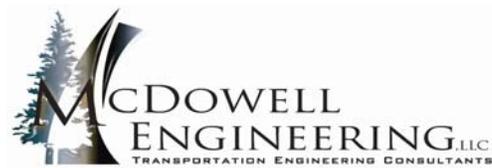

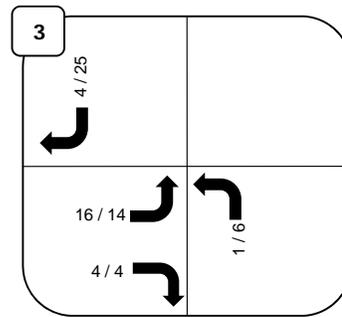

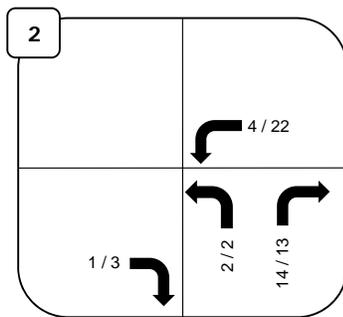

When the trip generation for this site is applied to the estimated trip distribution, the result is the anticipated assignment of trips on the roadway system. **Figure 7a** depicts the new vehicle trips that are anticipated from the proposed development for the interim access condition. **Figure 7b** depicts the new vehicle trips for the future access condition.

Figures 8 and 9 depict the total vehicle trips on Grand Avenue and Sylvan Lake Road.

The Year 2017 total traffic is the sum of Year 2017 background traffic and the project-generated traffic. This total can be seen in **Figure 8a** for the interim access condition and **Figure 8b** for the future access condition.

Similarly, Year 2035 total traffic is the sum of the Year 2035 background traffic and the project-generated traffic. This total can be seen in **Figure 9a** for the interim access condition and **Figure 9b** for the future access condition.

5.0 Transportation Impact Analysis

5.1 Access Description

The proposed access locations are depicted in the site plan - **Figure 2**.

Interim Access: Prior to the devolution of Grand Avenue (US 6), the site's access to the roadway network includes an emergency-only access to Grand Avenue located approximately 250-feet west of the Sylvan Lake Road roundabout (north site access) and a full movement access to Sylvan Lake Road located approximately 360-feet south of the Sylvan Lake Road roundabout (east site access). The emergency access to Grand Avenue is intended to serve the Greater Eagle Fire Protection District¹² and other emergency vehicles only. Access restrictions will prevent vehicle traffic from using the emergency access but will allow the Fire District access in the event of an emergency.

Future Access: Future access to the site includes a right-in / right-out (RIRO) access to Grand Avenue located approximately 250-feet west of the Sylvan Lake Road roundabout (north site access) and a full movement access to Sylvan Lake Road located approximately 360-feet south of the Sylvan Lake Road roundabout (east site access).

The interim and future access configurations are being proposed to address the request of the Greater Eagle Fire Protection District for access to Grand Avenue in the short term. Once devolution has passed access control responsibilities from CDOT to the Town of Eagle, the applicant would request that the emergency access is converted to a RIRO access.

5.2 Access Permits

CDOT and the Town of Eagle are in the process of devolution of ownership of this section Grand Avenue (US 6). However, at this time CDOT owns and maintains Grand Avenue (US 6) and has authority to permit access to the highway.

Section 2.6(3) of the *State Highway Access Code*¹⁰ (*Access Code*) requires a new access permit when there is a land use change. Therefore, a new State Highway Access Permit will be required for the proposed interim access configuration that includes an emergency access as requested by the Greater Eagle Fire Protection District¹².

5.3 Auxiliary Turn Lane Analysis

The Town of Eagle refers to the *Access Code* to provide regulation for auxiliary lanes.

Grand Avenue (US 6) and North Site Access: Grand Avenue (US 6) is currently classified by CDOT as an R-A, regional highway. It is currently posted with a 45 mph speed limit in both directions at the site access.

Per Section 3.8(5) of the *Access Code*, a right turn deceleration lane is required when the peak hour turning volume exceeds 25vph. A left turn deceleration lane is required when the peak hour turning volume exceeds 10vph. A right turn acceleration lane is required for any access with a projected peak hour right turning volume greater than 50vph when the posted speed on the highway is greater than 40mph.

Based upon the Year 2035 total traffic volumes no auxiliary deceleration or acceleration lanes will be required at the north site access. Details for this analysis are shown in **Table 2**.

Sylvan Lake Road and East Site Access: Sylvan Lake Road is equivalent to CDOT's NR-B classification for a non-rural arterial. It is currently posted with a 35 mph speed limit in both directions at the site access.

Per Section 3.11(4) of the *Access Code*, a right turn deceleration lane is required when the peak hour turning volume exceeds 50vph. A left turn deceleration lane is required when the peak hour turning volume exceeds 25vph. A right turn acceleration lane is not required.

Based upon the Year 2035 total traffic volumes no auxiliary deceleration or acceleration lanes will be required at the east site access. Details for this analysis are shown in **Table 2a** and **Table 2b**.

Table 2a: Auxiliary Turn Lane Analysis – Interim Access Condition

Intersection	Movement	Year 2035 Peak Traffic (vph)		Access Code ³	Access Code ³ Required Turn Lane
		AM	PM		
Sylvan Lake Road /	Sylvan Lake Road Posted Speed = 35mph				
East Site Access	EBL	16	14	>25vph	Decel lane not required.
	EBR	4	4	N/A	Accel lane not required.
	NBL	1	6	>25vph	Decel lane not required.
	SBR	4	25	>50vph	Decel lane not required.

Table 2b: Auxiliary Turn Lane Analysis – Future Access Condition

Intersection	Movement	Year 2035 Peak Traffic (vph)		Access Code ³	Access Code ³ Required Turn Lane
		AM	PM		
Grand Avenue (US 6) /	Grand Ave. Posted Speed = 45mph				
North Site Access	EBR	1	3	>25vph	Decel lane not required.
	NBR	12	11	>50vph	Accel lane not required.
Sylvan Lake Road /	Sylvan Lake Road Posted Speed = 35mph				
East Site Access	EBL	4	4	>25vph	Decel lane not required.
	EBR	4	4	N/A	Accel lane not required.
	NBL	1	6	>25vph	Decel lane not required.
	SBR	4	22	>50vph	Decel lane not required.

5.4 Sensitivity Analysis

CDOT typically requests a sensitivity analysis to determine when auxiliary turn lanes may be triggered if the directional distribution is changed.

Based upon the auxiliary lane triggers from the *Access Code*, 80% of traffic would need to be arriving from the west (Gypsum) on Grand Avenue (US 6) to trigger the need for an eastbound right deceleration lane.

Even with 100% of the egressing traffic using the north access to make a northbound right movement out of the site, the need for an acceleration lane is not triggered.

5.5 Design Vehicle

Per Table 4-3 of the *Access Code*, the design vehicle for a residential land use is a passenger car or pickup truck when the property is not located on a school bus route. If the property is located on a school bus route, the project should be designed for a single unit truck.

5.6 Sight Distance

Grand Avenue (US 6): The proposed north site access location has adequate sight distance to the west that exceeds the 450-foot requirement (585' for SU) in Table 4-2 of CDOT's *Access Code* for a two-lane, 45mph roadway. This is based upon the requirements for single unit trucks over 10,000 pounds. This access will be RIRO only therefore sight distance to the east is not applicable.

If Grand Avenue is widened to four lanes in the future; the entering sight distance requirement will be 540 feet for a 45mph roadway (675' for SU) and 420 feet for a 35mph roadway (525' for SU.) The proposed Grand Avenue access sight distance to the west exceeds 900 feet.

Sylvan Lake Road: Alpine Engineering performed separate sight distance analyses for the proposed access to Sylvan Lake Road. This was based upon a previous speed study by the Town of Eagle that determined southbound vehicles accelerating out of the Sylvan Lake Road roundabout were travelling at 27-30mph at the site access. Alpine Engineering's detailed analysis is included in the **Appendix**.

5.7 Access Design Criteria

The proposed site accesses shall to be constructed per Section 4 of the *Access Code*. Town of Eagle's regulations and engineering standards will also apply.

For the Future Access configuration, the north site access onto Grand Avenue will be limited to right—in, right-out movements only. By extending the splitter island of the west leg of the Grand Avenue / Sylvan Lake Road roundabout west past the site access, left turns in and out of the site would be restricted.

6.0 Recommendations and Conclusions

The proposed Sylvan Lake Circle project is anticipated to be successfully accommodated into the greater roadway system.

Trip Generation:

Based upon the applicant's proposed land use and a 5% multimodal trip reduction, the project can be anticipated to generate 288 vehicle trips per day (vpd) on the average weekday. Peak hour traffic on a weekday at project buildout is anticipated to be 25 vehicles per hour (vph) during the morning peak hour, 49 vph during the evening peak hour.

State Highway Access Permits:

CDOT and the Town of Eagle are in the process of devolution of ownership of this section Grand Avenue (US 6). However, at this time CDOT owns and maintains Grand Avenue (US 6) and has authority to permit access to the highway. Section 2.6(3) of the *State Highway Access Code*¹⁰ (*Access Code*) requires a new access traffic forecasts; there are not any foreseen safety or operational reasons to recommend auxiliary lanes or other highway improvements.

Auxiliary Turn Lanes:

The traffic volumes generated by this development are not anticipated to require the construction of auxiliary turn lanes on Grand Avenue or Sylvan Lake Road. Based upon review of the proposed operations, Grand Avenue and Sylvan Lake Road characteristics, and traffic forecasts; there are not any foreseen safety or operational reasons to recommend auxiliary lanes or other highway improvements.

Access Construction:

The proposed site accesses shall to be constructed per Section 4 of the Access Code. Town of Eagle's regulations and engineering standards will also apply.

For the Future Access configuration, the north site access onto Grand Avenue will be limited to right—in, right-out movements only. By extending the splitter island of the west leg of the Grand Avenue / Sylvan Lake Road roundabout west past the site access, left turns in and out of the site would be restricted.

Site Improvements

Project generated traffic was reduced by 5% due to the proximity of multiuse paths and the ECO Transit bus stop. It is recommended that the project include the necessary site improvements to provide pedestrian connectivity from the site to the adjacent bicycle and pedestrian facilities, as well as the bus stop.

Kari McDowell Schroeder

From: Tom Gosiorowski
Sent: Friday, May 15, 2015 3:17 PM
To: Kari McDowell Schroeder
Subject: RE: Sylvan Lake Circle - CDOT & Traffic Engineering

Kari,

Could you meet or call on Tuesday afternoon 5/19 at 1:30 p.m.?

With regard to the RIRO on Highway 6, I think that we can get this approved if we can show need. I understand that the access code states that if a property has access to the local street then there is no right of having access to the state highway, but the code does not state that you cannot have highway access if you have local street access. So in my opinion it comes down to need and what access configuration creates the best overall traffic flow. I haven't calculated trip gen for the project, but if the peak hour trips would cause a single Sylvan Lake Road (SLR) driveway intersection to drop below the Town's standard of LOS C, or would cause adverse impact to traffic operations within the roundabout, then I think we would have need for a Highway 6 access. Also, the local fire department may require two access points in and out of the site, and due to the short frontage on SLR it is not feasible to have two connections to that road.

When I met with the project architect/developer he stated that they might be agreeable to a RIRO on SLR and a RIRO on Highway 6. This might be the most ideal situation for LOS and overall traffic flow, and if that was the case then I think we could convince CDOT of the need for a Highway 6 access.

The Town is the Issuing Authority for access permits on Highway 6 here, and I have had a very good working relationship with Dan, so I think that if it proves out that two access points are optimal then we can get that approved. I think that you may have to do some initial traffic calcs to see how LOS and traffic operations look and then we can make a final decision as to what access configuration would be best.

Thanks,

Tom Gosiorowski, PE

Subject: Sylvan Lake Circle - CDOT & Traffic Engineering

Kevin and Tom,

Can you please give me a call to discuss the access locations for the proposed Sylvan Lake Circle project located on the southwest corner of the Sylvan Lake Road roundabout? I discussed the proposed RIRO US 6 access with Dan

Roussin. He said that we would need to show that the Sylvan Lake Road sight distance would make a Sylvan Lake Road access infeasible before CDOT would consider a US 6 access.

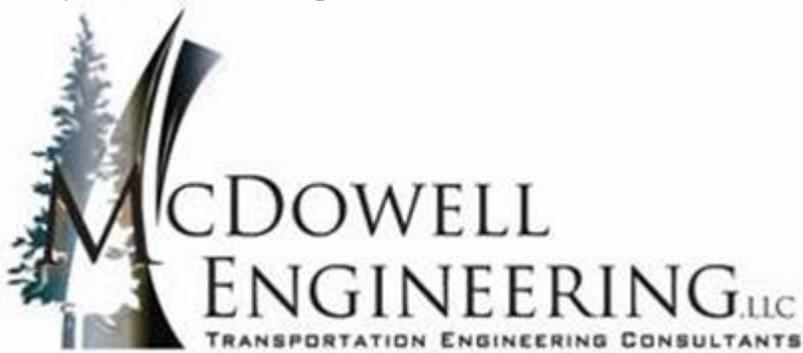

I know that this project has quite a bit of history. I have a copy of the old Kum & Go traffic study for the site that I will review over the weekend.

I would also appreciate the opportunity to formalize the required traffic study scope for the new project.

Thank you,

Kari

Date: June 13, 2016

Re: **Sylvan Lake Circle
Intersection Level of Service
Eagle, Colorado**

Background:

This letter supplements the *Auxiliary Turn Lane Assessment Transportation Impact Study*¹ completed for this project by McDowell Engineering and dated May 16, 2016. The Town of Eagle has requested additional information concerning the operation of the proposed interim and future access scenarios.

Interim and future access configurations are being proposed to address the request of the Greater Eagle Fire Protection District for access to Grand Avenue in the short term. Once devolution has passed access control responsibilities from CDOT to the Town of Eagle, the applicant would request that the emergency access is converted to a RIRO access.

Interim Access: Prior to the devolution of Grand Avenue (US 6), the site's access to the roadway network includes an emergency-only access to Grand Avenue located approximately 250-feet west of the Sylvan Lake Road roundabout (north site access) and a full movement access to Sylvan Lake Road located approximately 360-feet south of the Sylvan Lake Road roundabout (east site access). The emergency access to Grand Avenue is intended to serve the Greater Eagle Fire Protection District¹² and other emergency vehicles only. Access restrictions will prevent vehicle traffic from using the emergency access but will allow the Fire District access in the event of an emergency.

Future Access: Future access to the site includes a right-in / right-out (RIRO) access to Grand Avenue located approximately 250-feet west of the Sylvan Lake Road roundabout (north site access) and a full movement access to Sylvan Lake Road located approximately 360-feet south of the Sylvan Lake Road roundabout (east site access).

Traffic Operations Evaluation:

Year 2017 and Year 2040 background and total traffic from the *Transportation Impact Study*¹ was evaluated for the interim and future access scenarios using *Highway Capacity Manual 2010*² (HCM) analysis procedures.

Intersection Level of Service:

Using HCM methodology, Synchro Version 8 software was used to determine the delay and Level-of-Service (LOS) at the two-way stop controlled (TWSC) intersections.

Table 1 summarizes the delay and LOS for each access scenario in Year 2017 and Year 2035.

Table 1: Total Traffic Level of Service

Name	Access Scenario	Traffic Control	Approach	Total Traffic			
				Year 2017		Year 2035	
				Level of Service		Level of Service	
				(Delay in Seconds)		(Delay in Seconds)	
				AM	PM	AM	PM
Sylvan Lake Road / East Site Access	Interim - without North Site Access	EB Stop	EB	B (13)	B (16)	C (17)	C (23)
			NB	A (0)	A (0)	A (0)	A (0)
			SB	A(0)	A (0)	A (0)	A (0)
Sylvan Lake Road / East Site Access	Future - with North Site Access	EB Stop	EB	B (11)	B (13)	B (14)	C (19)
			NB	A (0)	A (0)	A (0)	A (0)
			SB	A (0)	A (0)	A (0)	A (0)
US 6 / North Site Access	Future - with North Site Access	NB Stop	EB	A (0)	A (0)	A (0)	A (0)
			NB	B (14)	B (14)	C (22)	C (23)

Interim Access: As can be seen in **Table 1**, the intersection is anticipated to operate at an acceptable LOS through Year 2035 without the north site access to Grand Avenue.

Future Access: As can be seen in **Table 1**, operations of the East Site Access improve slightly with the addition of the North Site Access. The addition of the North Site Access does not degrade the operation of Grand Avenue. Further, the Greater Eagle Fire Protection District has requested that at a minimum an emergency access be provided to Grand Avenue.

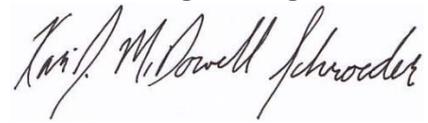

Conclusions:

Either access scenario will operate acceptably through Year 2035. Operations of the East Site Access improve slightly with the addition of the North Site Access. The addition of the North Site Access does not degrade the operation of Grand Avenue. Further, the Greater Eagle Fire Protection District has requested that at a minimum an emergency access be provided to Grand Avenue.

This analysis demonstrates that the project can operate at an acceptable LOS with either access scenario.

Please call if you would like any additional information or have any questions regarding this matter.

Sincerely,
McDowell Engineering, LLC

Kari J. McDowell Schroeder, PE, PTOE

TECHNICAL MEMO:

To: Jonathan Warner, CWA
From: Gary L Brooks, AEI
Date: June 9, 2016

Sanitary Sewer:

The project is proposed to be served by 8" PVC sewer mains that will cross Brush Creek, traverse across a portion of the Green Acres Mobile Home Park and tie into an existing manhole and 8" PVC sewer main located south of Brush Creek. The sewer main crossing of Brush Creek and the portion on the mobile home park require an Eagle County 1041 Permit.

All proposed units will have individual sewer service lines. The westernmost four (4) townhome units will require individual sump pumps and a force main line connecting into a proposed manhole. The force main is proposed to be a private line maintained by the Sylvan Lake Circle Home Owners Association.

Treated Water System:

The proposed treated water distribution system for the SLC parcel is anticipated to connect to the town's existing water main line infrastructure east of Sylvan Lake Road along the eastern boundary of the project. According to town staff the existing water treatment plant has approximately 300 SFE's available to serve future growth before the plant will need to be expanded. The proposed density of this project falls within the current plant capacity.

The proposed distribution system connects into the Town water system at the existing 8" DIP transmission line located east of Sylvan Lake Road. The SLC water system is proposed to be served by a 8" DIP water main.

The water pressure appears to be adequate to serve the development and have sufficient fire flows, as the project is located in the upper part of the Eagle's Zone #1 the "Town Zone". Zone #1 water system and tanks are set at an elevation of approximately 6689'. This elevation would equate to a hydrostatic water pressure of approximately 60 psi at the center of the project.

A hydraulic study is being run by Hatch Mott MacDonald, the town's water system engineer, of the proposed SLC parcel water system to insure that adequate system pressure and fire flow volumes are available to serve the project. Fire flow demand was provided to HMM for the project which will be sprinkled.

Water services to individual lots or multi-family units will be designed in compliance with Town Design Standards. Water line easements will be created and dedicated to the Town by Final Plat for all water mains outside of the public right-of-way.

Sylvan Lake Circle Parcel – Water Demand

Water Demand Calculations – Maximum Day Demand (MDD) at Buildout

Residential In-house Use

Unit/Density Type	Unit Count	Persons Per Unit	Water Volume Per Capita Daily (Gallons)	Average Daily Volume (Gallons)	Peaking Factor	Peak Day Volume (Gallons)
Residential	42	2.0	90	11,760	2.0	23,560

Common Area Irrigation (Assumed Acreage)

Irrigated Acreage	Application Rate (AF)	Avg Day Demand (acre feet)	Peaking Factor	Peak Day (AF)	Peak Day (Gallons)
0.5	0.01683	0.008415	2.0	0.01687	5,484

Peak Day Demand:

In-house	23,520.00 gallons/day
Irrigation	5,484.00 gallons/day
Total	29,004.00 gallons/day

DRAINAGE TECHNICAL MEMO:

To: Jonathan Warner, CWA
Gary Brooks, AEI
From: Heiko Mues, AEI
Date: June 13, 2016

Drainage:

The purpose of this Drainage Technical Memo is to summarize the existing hydrologic conditions found at the Sylvan Lake Circle development site and to describe the proposed storm drainage design and stormwater quality treatment facilities for the proposed project.

The proposed Sylvan Lake Circle Parcel development is located south and west of the U.S. Highway 6 Sylvan Lake Roundabout and just north of the Green Acres Mobile Home Park in the Town of Eagle, Colorado. The site is proposed to have 42 townhome units.

Existing Conditions:

The majority of the existing parcel is currently covered with grasses and sage. There is some off-site drainage coming onto the site from the Sylvan Lake Roundabout and surrounding property. Some stormwater runoff from the Sylvan Lake Roundabout and Sylvan Lake Road discharges onto the site from an 18" RCP storm sewer pipe on the east end of the site. Some runoff from U.S. Highway 6 and the Sylvan Lake Road Roundabout discharges to the west on the north side of the site.

Proposed Conditions:

Historic drainage patterns will be maintained with the proposed storm sewer. Off-site stormwater flows will be kept separate from on-site as much as possible.

The runoff from the existing 18" RCP storm sewer from Sylvan Lake Road on the east side of the site will be intercepted by proposed storm sewer and rerouted away from proposed improvements and discharged to Brush Creek approximately where it flowed historically. A cross pan is proposed at the Sylvan Lake Road entrance to the site to keep Sylvan Lake Road flows in the curb pan and discharging to their historical discharge point.

The road and curb pan runoff from U.S. Highway 6 at the northeast corner of the site that flows onto the site will be intercepted by a proposed inlet before the emergency entrance and piped to where it generally flowed historically.

On-site stormwater is being collected in curb, pans and inlets and piped to Bioswales that will provide some water quality treatment of stormwater. The Bioswales flow to the Water Quality Retention Pond.

Water Quality Treatment:

Water quality treatment of stormwater is being provided by Bioswales, Infiltration Basins and a Water Quality Retention Pond.

The Bioswales will carry runoff from the developed site to the Water Quality Retention Pond providing some treatment during the conveyance of stormwater. The Bioswales will consist of coarse sand, peat moss and sandy loam and with grass plantings.

The Infiltration Basins are located below a portion of the developed site that does not drain to the Water Quality Retention Pond via a Bioswale. An Infiltration Basin has also been located below the east 18" RCP storm sewer from Sylvan Lake Road to provide some water quality treatment of the off-site runoff discharging at the southeast corner of the site. The Infiltration Basins will consist of cobble to infiltrate runoff with soil and grass plantings except at the east off-site 18" RCP storm sewer outfall where riprap will cover the cobble infiltration basin.

The Water Quality Retention Pond will be constructed entirely in cut so that there is no fill placed within the floodplain and there is no increase in the water surface of the floodplain as a result of the proposed development. The Water Quality Retention Pond will also treat off-site runoff from U.S. Highway 6 at the northeast corner of the site that flows onto the site. The Water Quality Retention Pond has been sized for the entire drainage area. The Retention Pond may also receive some groundwater discharge at certain times of the year based upon the soils report. A riprap outlet spillway and riprap outfalls at the Bioswale discharge points will be provided to prevent erosion.

The Denver Urban Drainage and Flood Control District (UDFCD) manual has been used to calculate the WQCV based upon impervious area percentages of each developed drainage basin. Calculations are provided below.

CDPHE Permits:

It is anticipated that sediment control for the Sylvan Lake Circle Parcel will be addressed through the Colorado Discharge Permit System (CDPS), Stormwater Discharges Associated with Construction Activity permit. This permit is obtained from the Colorado Department of Public Health and Environment (CDPHE) and requires the preparation of a Stormwater Management/Best Management Practices (SWM/BMP) plan. A SWM/BMP plan will be prepared for the site to ensure that sediment control measures will be installed to control sediment from leaving the site.

It is also anticipated that a groundwater discharge permit will be obtained for this site should any dewatering of groundwater be required during construction. This permit is also obtained from the CDPHE as part of the CDPS permit system.

A handwritten signature in black ink that reads "Heiko Mues". The signature is written in a cursive style with a large initial 'H'.

1.0 Introduction

A sanitary sewer line is being extended to the Ewing Parcel, an undeveloped property owned by West Eagle Ranch, LLC. The parcel, which is bisected by Sylvan Lake Road, is located just south of U.S. Highway 6 near the western boundary of the Town of Eagle (Figure 1). Specifically, the project site is located in Section 5 of Township 5 South and Range 84 West in Eagle County, Colorado (Figure 2).

The project purpose is to extend the existing sanitary sewer main in the Green Acres Mobile Home Park, located just south of the Ewing Parcel across Brush Creek, to the Ewing Parcel to enhance its appeal for sale. To aid in project planning, wetlands were delineated along Brush Creek in the vicinity of the proposed sewer line crossing. The delineation includes a portion of the Ewing Parcel located north of the creek and west of Sylvan Lake Road, as well as the southern bank of Brush Creek within the mobile home park.

This report describes the Brush Creek Wetlands with respect to their vegetation, soils, and hydrology; provides a Wetland Map; includes a description of the proposed work; identifies the associated impacts to wetlands and wildlife; discusses avoidance and minimization; and provides a plan to re-establish the temporarily impacted wetlands following sewer line installation.

Please note, all Figures are included with the text, Photos are in Section 9.0 and Tables are in Section 10.0.

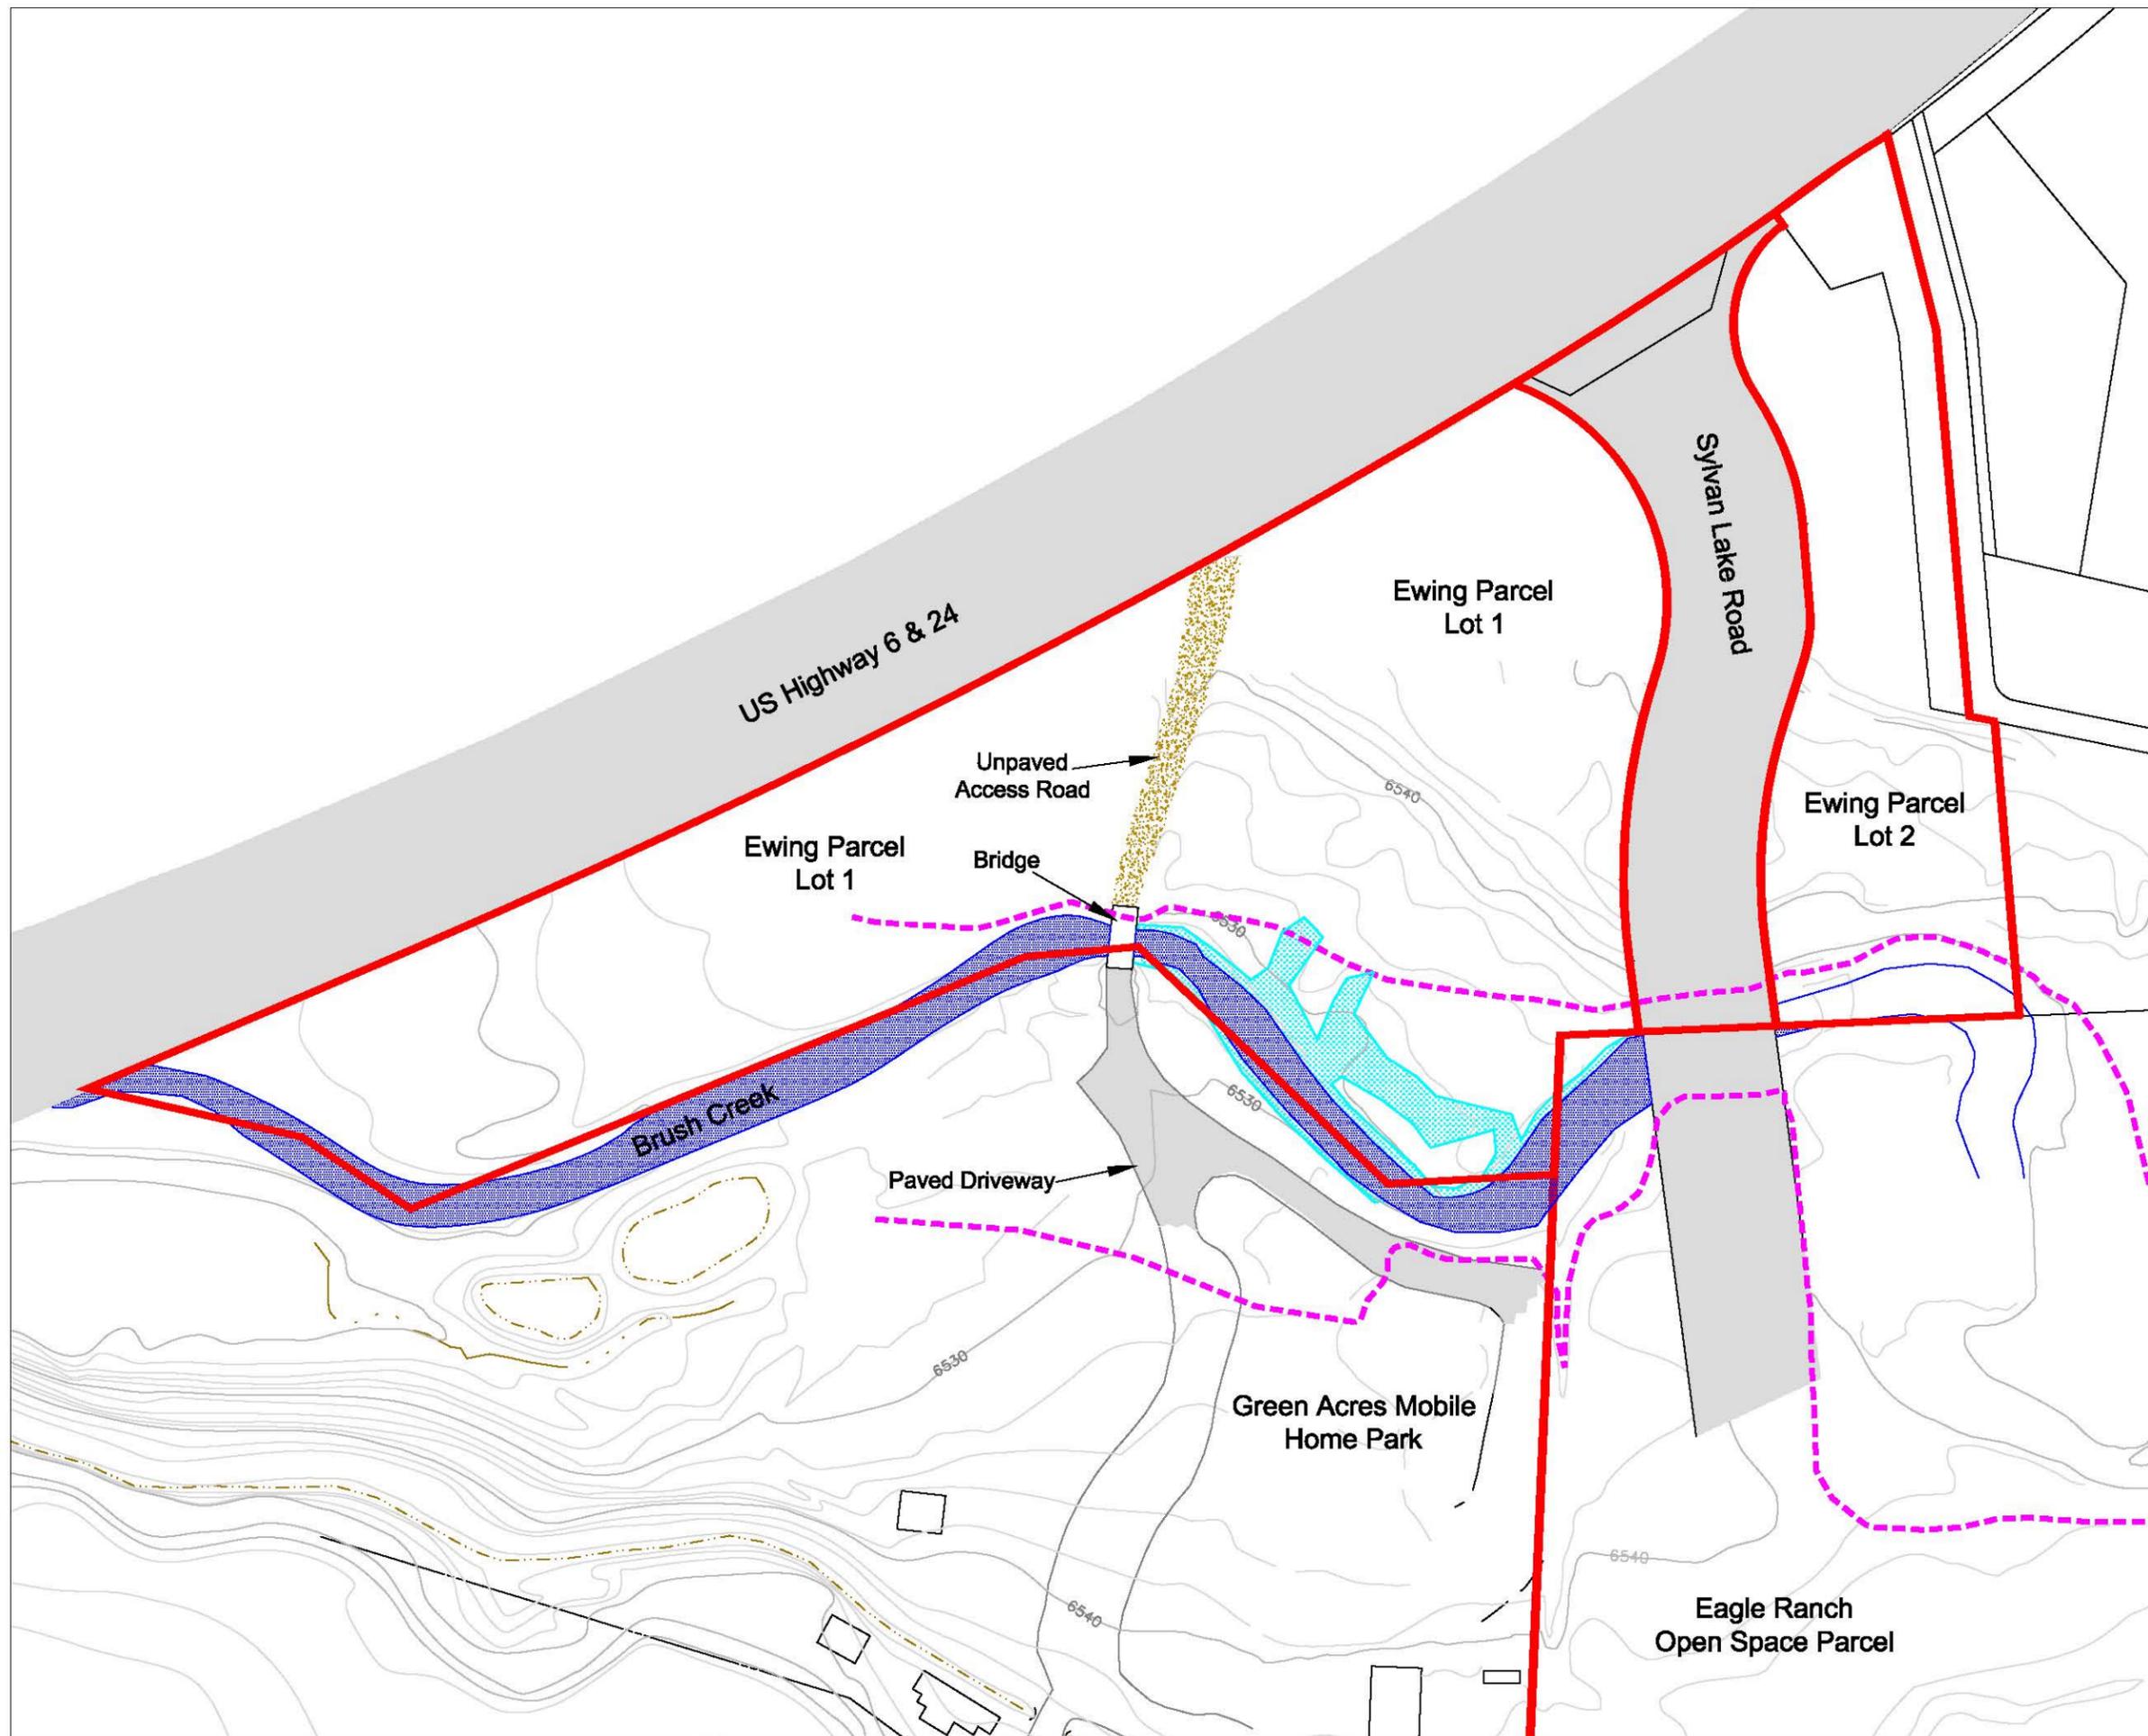

2.0 Environmental Setting

The portion of the Ewing Parcel included in the wetland delineation is located southwest of the Sylvan Lake Road roundabout on Highway 6, and just west of the existing Eagle Ranch residential development in Eagle, Colorado (Figure 1). The area of the wetland delineation is bounded by Sylvan Lake Road on the east and by U.S. Highway 6 to the north. A driveway in the Green Acres Mobile Home Park that crosses a bridge onto the Ewing Parcel forms the southern and western boundaries of the wetland delineation. The project area is bisected by Brush Creek, a perennial tributary of the Eagle River. Wetlands occur along the banks of Brush Creek and in a few low areas on the terrace north of the creek. Upland habitats north of the river have been disturbed by agricultural activities and road construction, and are vegetated by introduced grasses and weeds. South of Brush Creek, the native riparian vegetation has been replaced with an irrigated bluegrass lawn in the mobile home park. Elevations of the project area range from a high of approximately 6,550 feet on the terrace north of the creek to a low of approximately 6,526 feet where Brush Creek flows under the small bridge at the western boundary of the project area.

3.0 Delineation Methods

Wetlands were delineated by Heather Houston of Western Ecological Resource, Inc. and David Buscher of Buscher Soil & Environmental Consulting, Inc. in accordance with the U.S. Army Corps of Engineers' 1987 Wetland Delineation Manual on October 29, 2007. Specifically, wetland boundaries were delineated and flagged based upon the prevalence of hydrophytic vegetation, hydric soils, and indicators of a wetland hydrology. Field forms for the five test pits with vegetation, soils, and hydrology data are included in Appendix A. In general, plant species names follow Weber and Whitmann (1992). The wetland status of plants follows the 1988 National List for the Intermountain Region. Classification of wetlands follows Cowardin et al. (1979). Wetlands were surveyed by Alpine Engineering, Inc. of Edwards, Colorado.

3.1 Agency Coordination

The U.S. Army Corps of Engineers has not visited the project site to review the delineated wetland boundary.

4.0 Wetlands Present

4.1 Brush Creek Wetland

4.1.1 Location

Herbaceous wetlands occur along the banks of Brush Creek (Photo 1), a perennial tributary of the Eagle River, and in a few low areas on the terrace north of the creek, as illustrated by the Wetland Map (Figure 3).

4.1.2 Classification

Under the Cowardin Classification System for Wetlands and Deepwater Habitats (Cowardin et al., 1979), the Brush Creek Wetland is classified in the Palustrine System, with Emergent Persistent and Scrub-Shrub Wetland Classes.

4.1.3 Vegetation

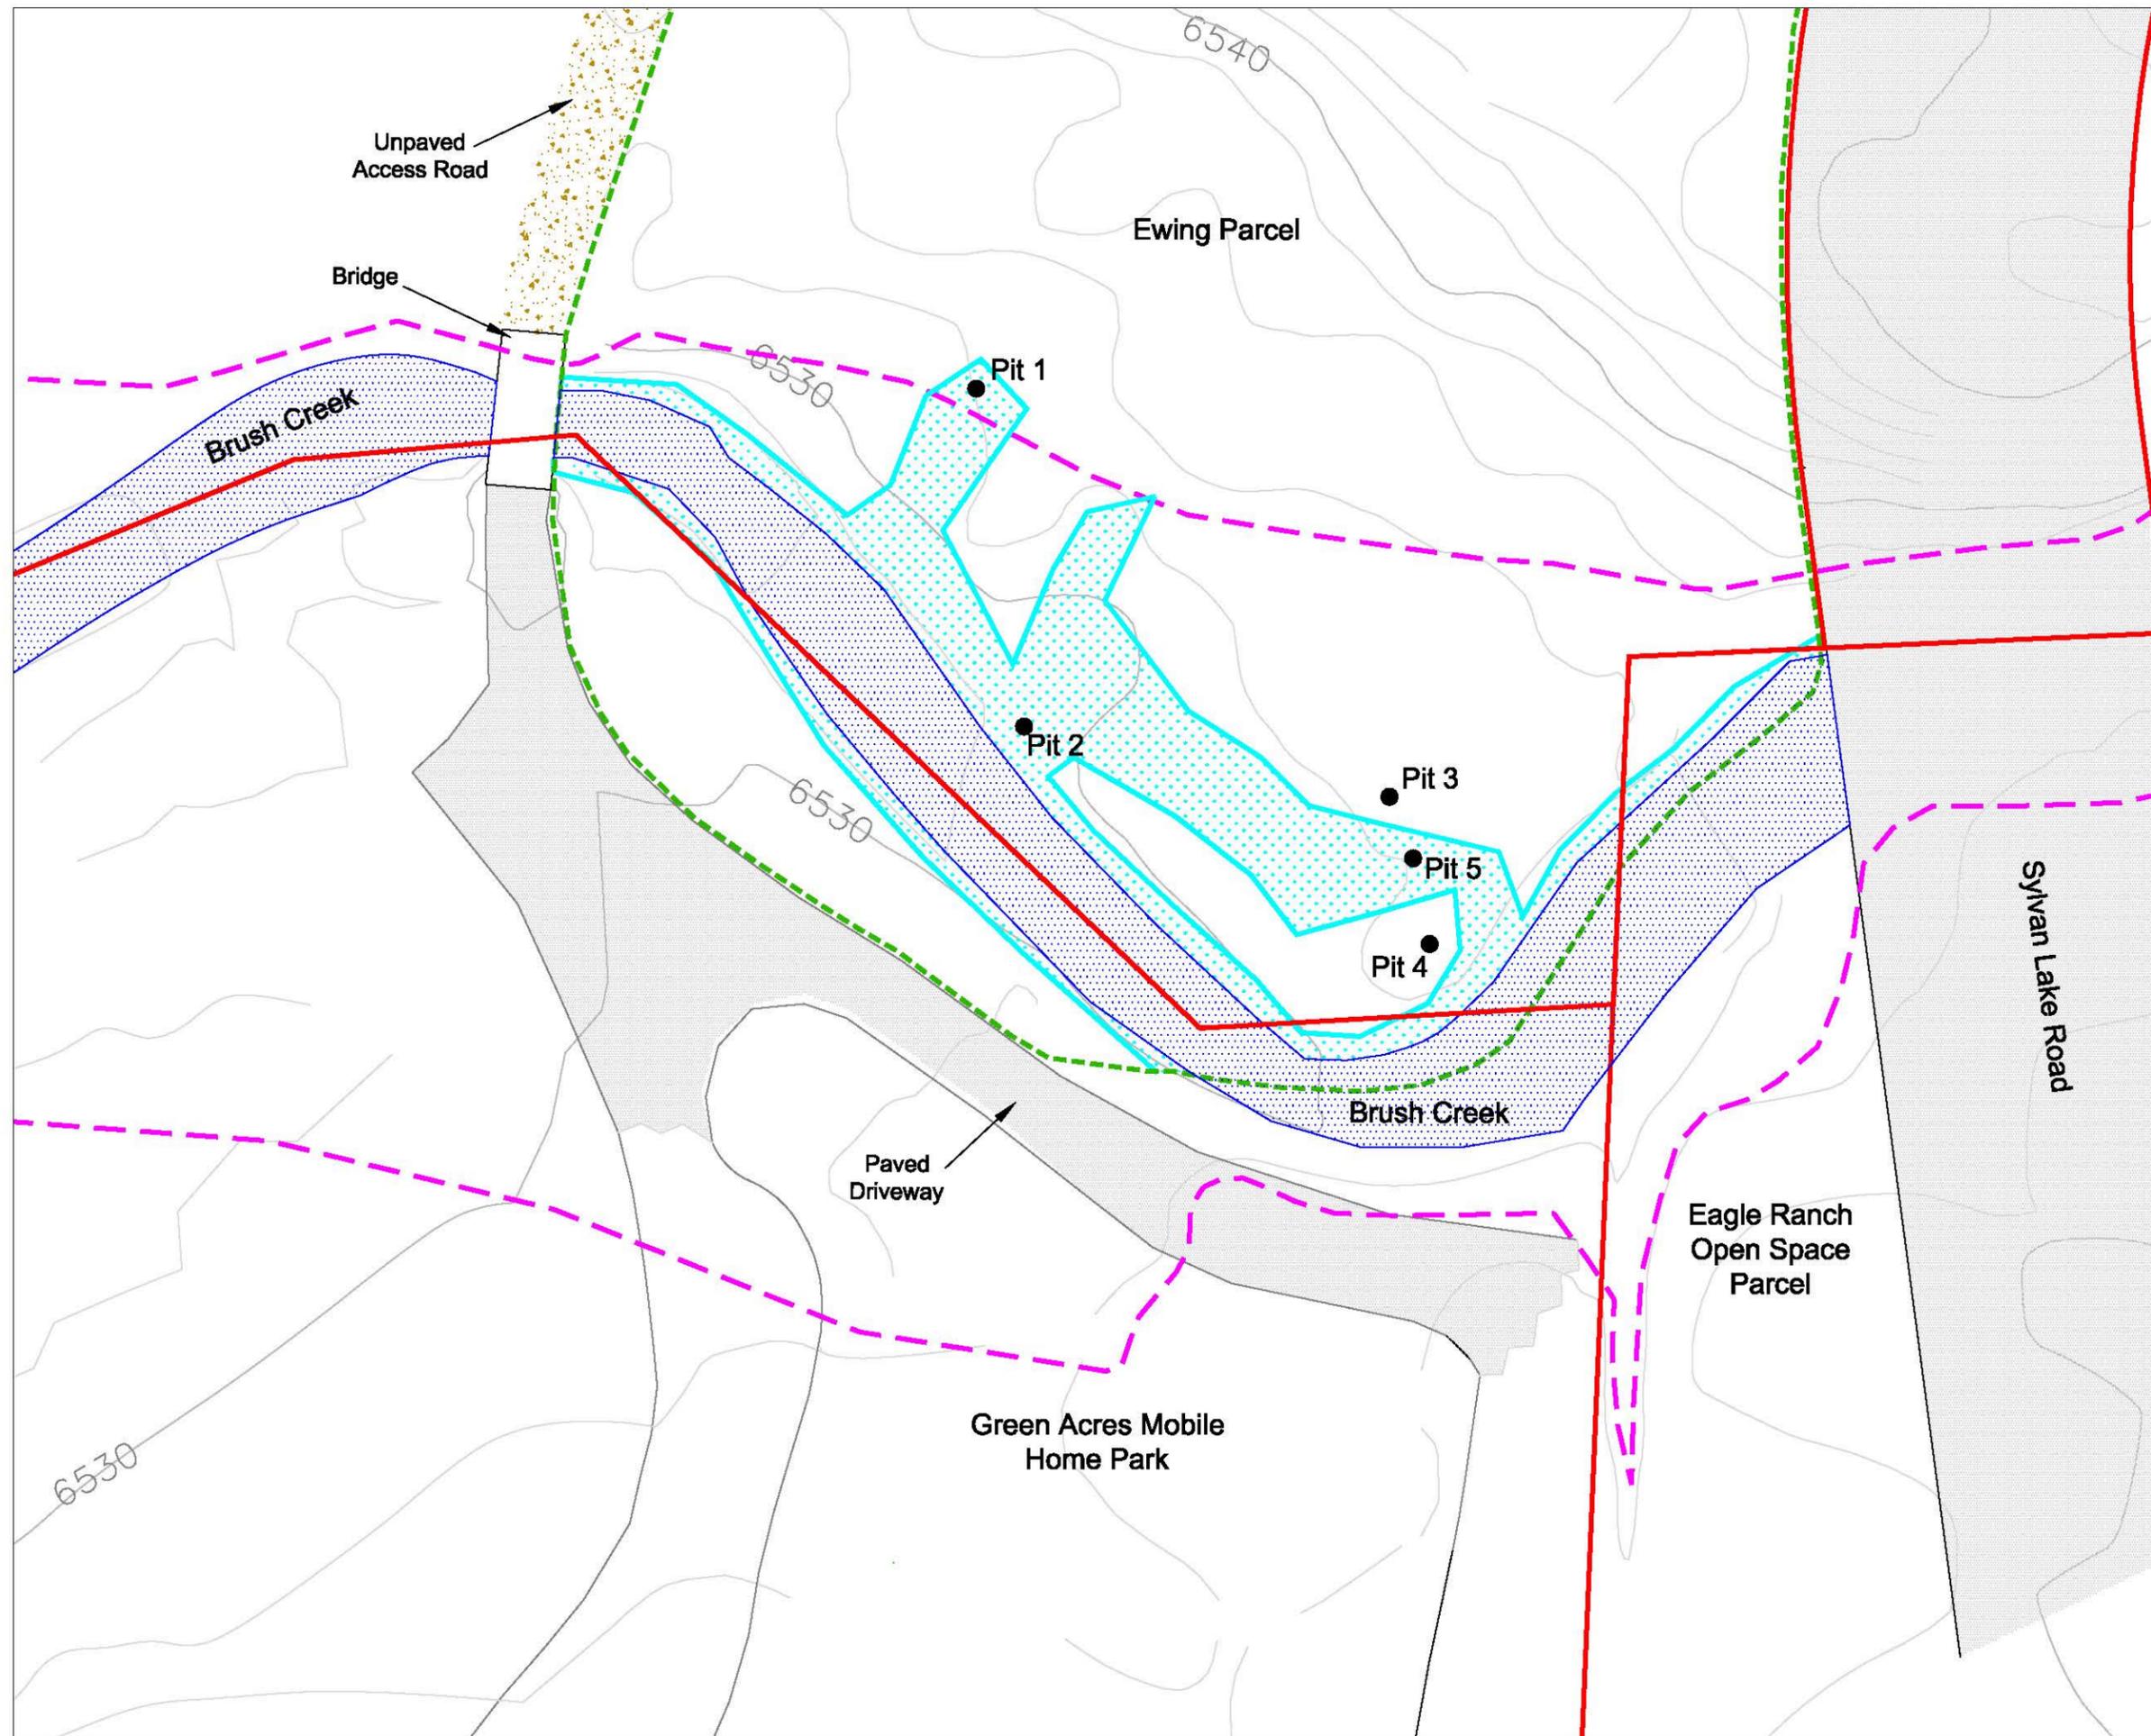

Within the Ewing Parcel on the north side of Brush Creek, the wetland has a well-developed overstory of riparian trees and shrubs (Photo 1). Narrowleaf cottonwoods (*Populus angustifolia*) are the dominant trees, however Russian olives (*Elaeagnus angustifolia*), a state-listed noxious weed, are also present. In the shrub layer, there are small stands of sandbar willow (*Salix exigua*), as well as mixed stands with silver buffaloberry (*Shepherdia argentea*), hawthorn (*Crataegus rivularis*), Woods' rose (*Rosa woodsii*), mountain willow (*Salix monticola*), Bebb willow (*Salix bebbiana*), and yellow currant (*Ribes aureum*). In the herbaceous understory, reed canarygrass (*Phalaris arundinacea*) is the most abundant plant, where it grows in the shallow water along the edge of the creek, and in low areas on the adjacent terrace with seasonally high ground water (Photo 2). Other common graminoids in the saturated soil habitat include beaked sedge (*Carex utriculata*) (Photo 3), Nebraska sedge (*Carex nebrascensis*), and woolly sedge (*Carex lanuginosa*) in the wetter areas, and redtop (*Agrostis gigantea*), clustered field sedge (*Carex praegracilis*), Baltic rush (*Juncus balticus* ssp. *ater*), and Kentucky bluegrass (*Poa pratensis*) in drier areas. Some of the common forbs in the saturated soil habitat include stinging nettle (*Urtica gracilis* ssp. *gracilis*), Siskiyou aster (*Aster lanceolatus* ssp. *hesperius*), willow-leaved dock (*Rumex triangulivalvis*), and New Mexico checkermallow (*Sidalcea neomexicana*). Table 1 lists the vascular plant species observed in the project area during the wetland delineation.

In the mobile home park, the south bank of Brush Creek has been planted with an irrigated Kentucky bluegrass lawn that extends to the edge of the creek and there is little woody vegetation (Photo 4). In the saturated soils next to the creek, scattered hydrophytes are growing in the lawn, including Nebraska sedge, woolly sedge, redtop, red fescue (*Festuca rubra*), and meadow fescue (*Festuca pratensis*) (Photo 5). Alsike clover (*Trifolium hybridum*) is also common in the lawn. Two blue spruce (*Picea pungens*) trees have been planted in the lawn near the creek. In the shallow water of the channel, there is a narrow band of reed canarygrass that lines the bank.

4.1.4 Hydrology

The Brush Creek Wetland is supported by perennial flows in the creek that saturate the banks, as well as a seasonally high ground water table associated with the alluvial aquifer. In addition, small depressions on the terrace north of the creek collect a small volume of snowmelt and stormwater runoff. Irrigation of the lawn south of the creek also provides some water to the wetland.

4.1.5 Soils

Three soil pits were dug within the boundary of the Brush Creek Wetland. Pit 1 is located on the terrace north of the creek approximately four feet above the stream flow elevation at the time of the delineation. The soil was not saturated, but it contained oxidized root channels and mottles, which are indicative of reducing conditions. The hydric soil in Pit 1 is in the Fluvaquentic Epiaquolls. Pit 2 is located on a narrow levee approximately 1.5 feet above the stream flow elevation on the day of the delineation, in a marginal area near an upland island. The soil was not saturated, but oxidized root channels and mottles were present below a depth of seven inches. The hydric soil in Pit 2 is also classified in the Fluvaquentic Epiaquolls. Pit 5 is located in a low area on the terrace north of the creek. Soil in the pit was not saturated, but it did contain mottles below a depth of seven inches, as well as oxidized root channels. This soil is hydric, and is classified in the Fluvaquentic Endoaquolls.

5.0 Wildlife Habitats & Use

A comprehensive Wildlife Assessment Report that includes the project area was prepared for the Eagle Ranch development (Rick Thompson, Western Ecosystems, 1996). The Assessment Report states that Brush Creek provides year-round habitat for fish, waterbirds, waterfowl, muskrats, and beaver. Within Eagle Ranch and in the project area, Brush Creek is generally considered a high-value wildlife habitat.

Brush Creek supports a fishery with mottled sculpin, brown trout, and rainbow trout (R. Thompson, 1996; B. Heicher, Town of Eagle Open Space Coordinator, personal communication). Due to the effects of whirling disease, brown trout comprise approximately 85% of the trout population, although this varies seasonally (B. Heicher, personal communication). Rainbow trout are most common in Brush Creek during the spring and summer months when they migrate upstream from the Eagle River to spawn. In contrast, brown trout are most abundant during spawning in the late summer and fall. Although spawning dates vary, general guidelines have been established for each species that identify sensitive time periods for spawning and egg development. For rainbow trout, this sensitive period is between March 15 and July 15. For brown trout, the period is between September 15 and March 15. Please note, although brown trout spawn in the fall, their eggs overwinter in the gravel streambed and egg development continues into the spring months, when hatching occurs.

The project site is located on Brush Creek approximately 2,000 linear feet upstream of the confluence of Brush Creek and the Eagle River. Due to its proximity to the Eagle River, this reach is potentially more important for spawning than other areas of Brush Creek located farther upstream (B. Heicher, Town of Eagle Open Space Coordinator, personal communication; Brian Healey, USFS Fisheries Biologist, personal communication).

The project area is within the overall range of elk and mule deer. However, the value of the project area for these species is reduced by the proximity of Sylvan Lake Road, Highway 6, the Highway Roundabout, and disturbances associated with humans in the mobile home park. In addition, the native vegetation south of the creek has been eliminated, which further reduces the wildlife habitat value.

There are no threatened, endangered, or candidate wildlife that occur in the location of the proposed sewer line crossing. The proposed project has no water depletions and hence would not affect the four endangered Colorado River fish (Colorado pikeminnow, bonytail chub, humpback chub, and razorback sucker) that occur far downstream of the project area on the mainstem of the Colorado River.

6.0 Proposed Project

In order to prepare the Ewing Parcel for sale, sewer service must be extended to the parcel from the existing sanitary sewer system in the adjacent Green Acres Mobile Home Park (Figure 4).

6.1 Details

6.1.1 Sewer Line Extension

The proposed sewer main extension would connect to the existing 8-inch PVC sewer line at the location of an existing manhole in the Green Acres Mobile Home Park. The new sewer line, a C900 type 8-inch PVC pipe, would extend southeast for approximately 119 feet from the existing manhole, then turn northeast and continue for another 150 feet to cross Brush Creek and terminate on the Ewing Parcel north of the creek. To minimize adverse impacts to the existing wetland hydrology, clay check dams would be installed along the proposed sewer line in all wetland areas.

6.1.2 Temporary Diversion of Brush Creek

A temporary cofferdam will be used to divert the stream flow of Brush Creek to allow installation of the sewer line below the streambed. A pump will be used to convey water from the cofferdam and return it to Brush Creek downstream of the work area. Thus, the flow in Brush Creek downstream of the work area will be maintained during installation of the sewer line.

6.1.3 Sediment Control Measures

The project will utilize Best Management Practices to comply with erosion control standards identified by Eagle County and the Town of Eagle. These measures will include the use of silt fencing, straw bales, and other approved methods to limit sedimentation into wetlands and the aquatic habitat of Brush Creek. In addition, two temporary sediment traps with removable pumping stations or sump pits will be constructed in uplands near the work area to filter ground water encountered during the construction process (Figures 4-7). Ground water present in the excavated sewer line trench will be pumped into the sediment trap where it will be filtered through clean gravel or stone. A second pump will pull water from the sediment trap and the clean, filtered water will be pumped into Brush Creek downstream of the work area.

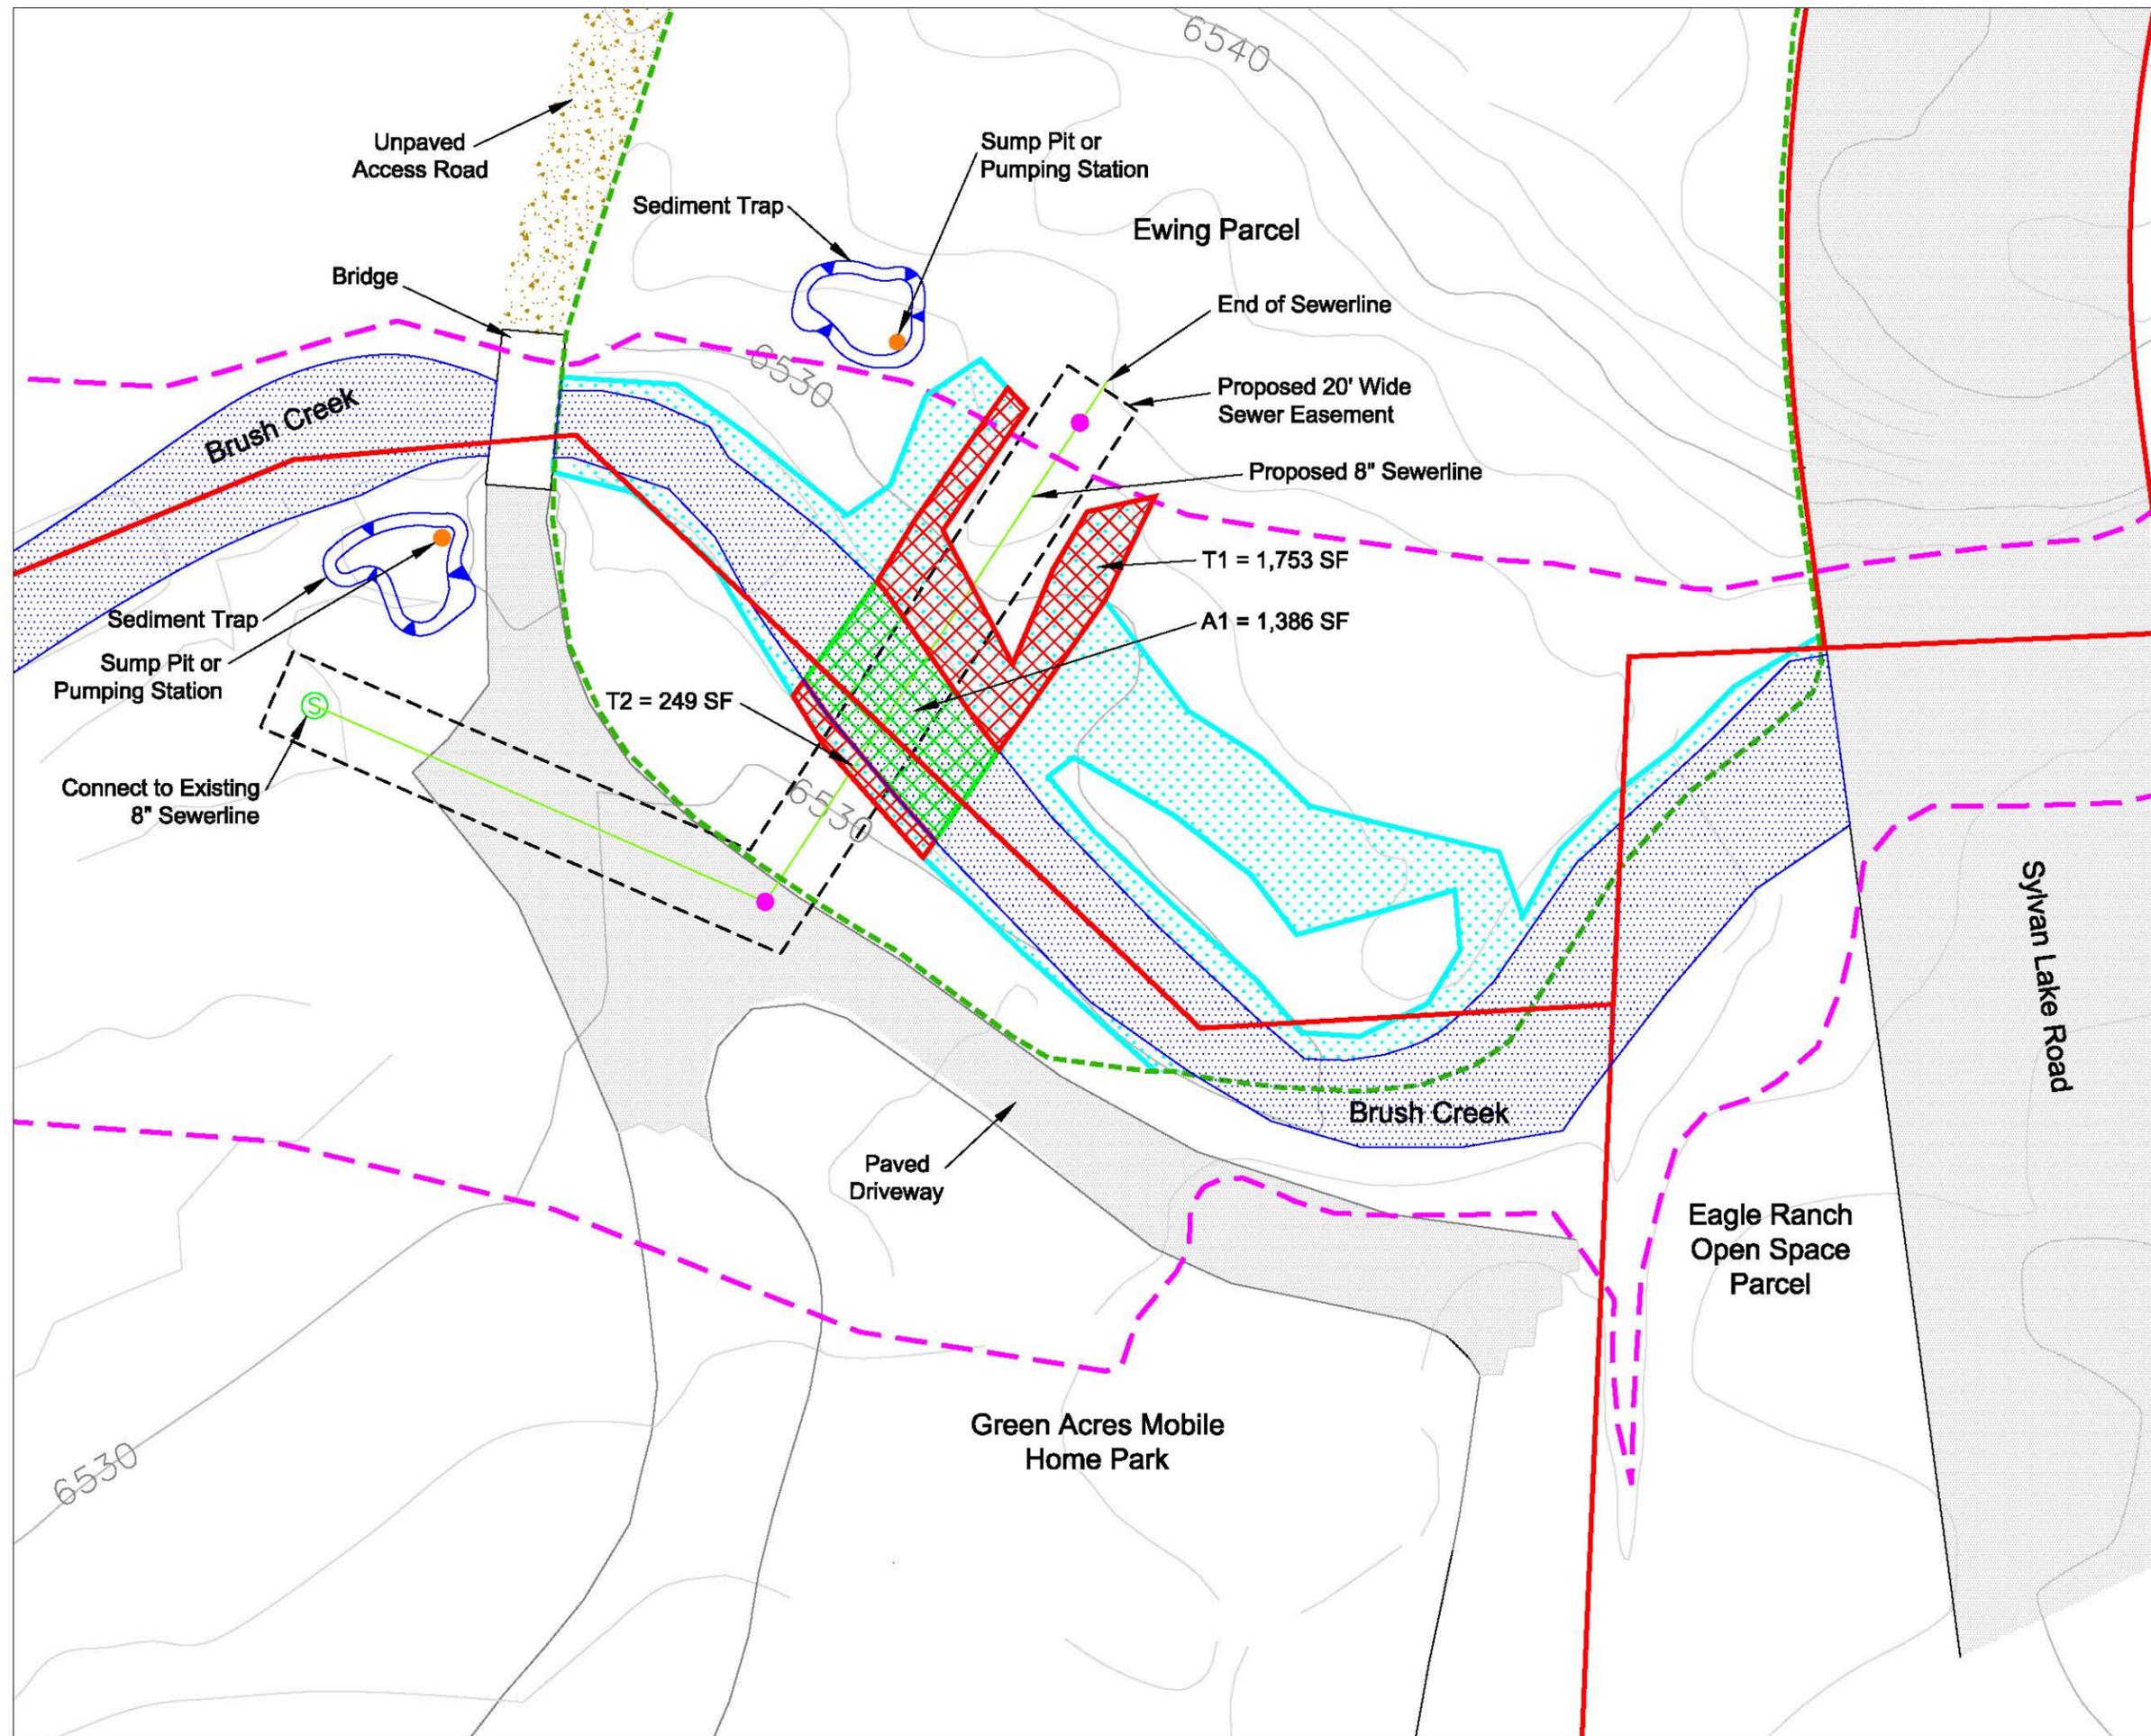

6.2 Waters of the U.S. Impacts

The proposed sewer line would temporarily impact 2,002 square feet (0.05 acre) of wetlands and 1,386 square feet of the aquatic habitat of Brush Creek (Figure 4). Specifically, 1,753 square feet of wetlands would be temporarily impacted north of the creek (T1) and 249 square feet would be temporarily impacted south of the creek (T2).

6.3 Avoidance & Minimization

The proposed sewer line crossing was designed to minimize the temporary impacts to wetlands and the aquatic habitat of Brush Creek. In designing the crossing, several alternative sewer alignments were evaluated. As shown by Figure 4, the proposed sewer line crosses the wetland in a narrow area between two lobes of the wetland that extend north from the channel. One alternative considered which would have a smaller wetland impact would locate the sewer line farther to the west near the small bridge over Brush Creek. However, this alternative was rejected because the configuration would not provide the minimum amount of soil cover required on top of the pipeline due to scour concerns in the creek bed. The preferred sewer alignment minimizes the temporary impacts to wetlands while meeting the requirements of the Town of Eagle to provide sufficient soil cover on top of the sewer line.

OPTION: A ONE FOOT LAYER OF 2" STONE MAY BE PLACED ON THE UPSTREAM SIDE OF THE RIPRAP IN PLACE OF THE EMBEDDED FILTER CLOTH.

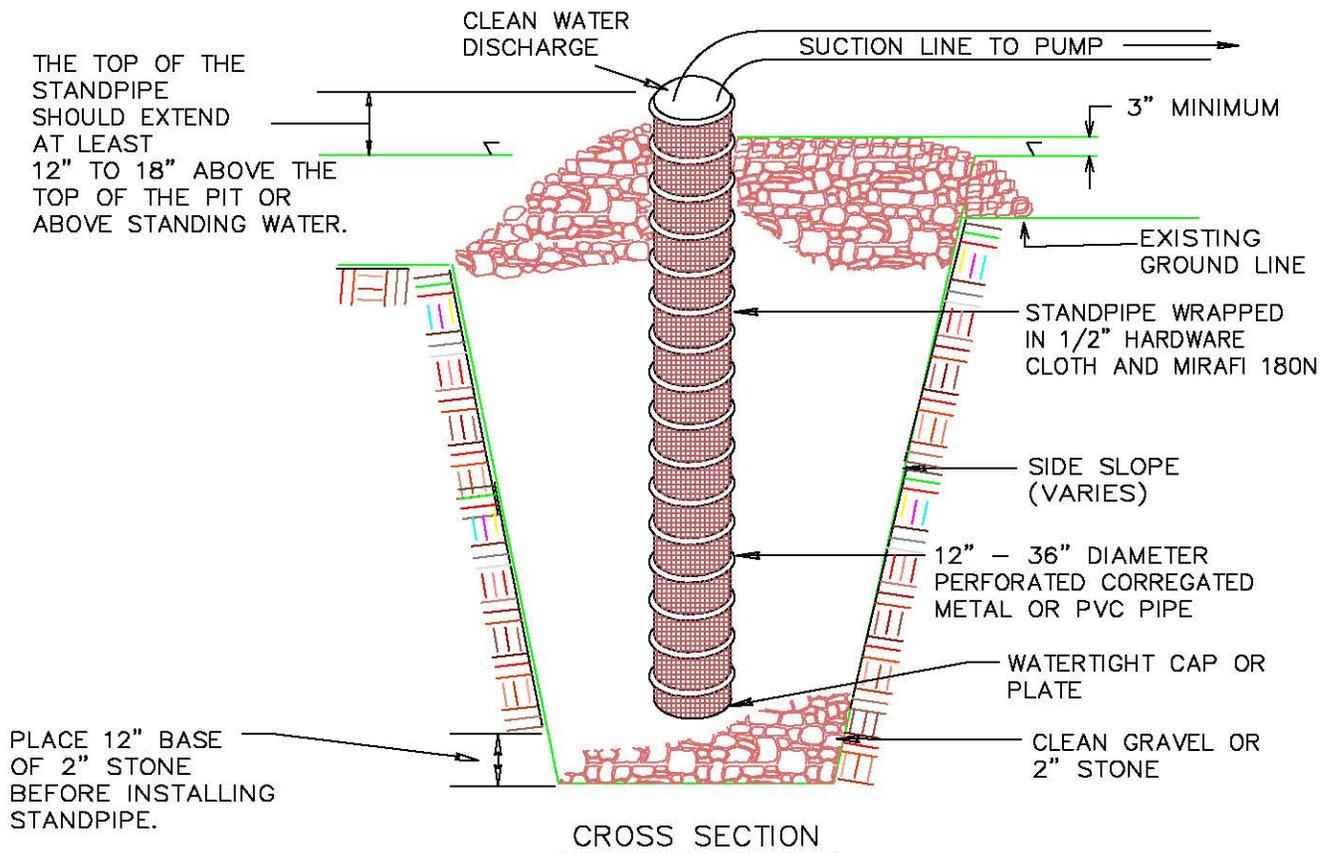

CONSTRUCTION SPECIFICATIONS

1. AREA UNDER EMBANKMENT SHALL BE CLEARED, GRUBBED AND STRIPPED OF ANY VEGETATION AND ROOT MAT. THE POOL AREA SHALL BE CLEARED.
2. THE FILL MATERIAL FOR THE EMBANKMENT SHALL BE FREE OF ROOTS AND OTHER WOODY VEGETATION AS WELL AS OVER-SIZED STONES, ROCKS, ORGANIC MATERIAL OR OTHER OBJECTIONABLE MATERIAL. THE EMBANKMENT SHALL BE COMPACTED BY TRAVERSING WITH EQUIPMENT WHILE IT IS BEING CONSTRUCTED.
3. ALL CUT AND FILL SLOPES SHALL BE 2:1 OR FLATTER.
4. THE STONE USED IN THE OUTLET SHALL BE SMALL RIPRAP 4"-8" ALONG WITH A 1' THICKNESS OF 2" AGGREGATE PLACED ON THE UP-GRADE SIDE ON THE SMALL RIPRAP OR EMBEDDED FILTER CLOTH IN THE RIPRAP.
5. SEDIMENT SHALL BE REMOVED AND TRAP RESTORED TO ITS ORIGINAL DIMENSIONS WHEN THE SEDIMENT HAS ACCUMULATED TO 1/2 THE DESIGN DEPTH OF THE TRAP.
6. THE STRUCTURE SHALL BE INSPECTED AFTER EACH RAIN AND REPAIRS MADE AS NEEDED.
7. CONSTRUCTION OPERATIONS SHALL BE CARRIED OUT IN SUCH A MANNER THAT EROSION AND WATER POLLUTION IS MINIMIZED.
8. THE STRUCTURE SHALL BE REMOVED AND THE AREA STABILIZED WHEN THE DRAINAGE AREA HAS BEEN PROPERLY STABILIZED.

Figure 5. Sediment Trap Detail

Date: April 2008
 Scale: Not to Scale

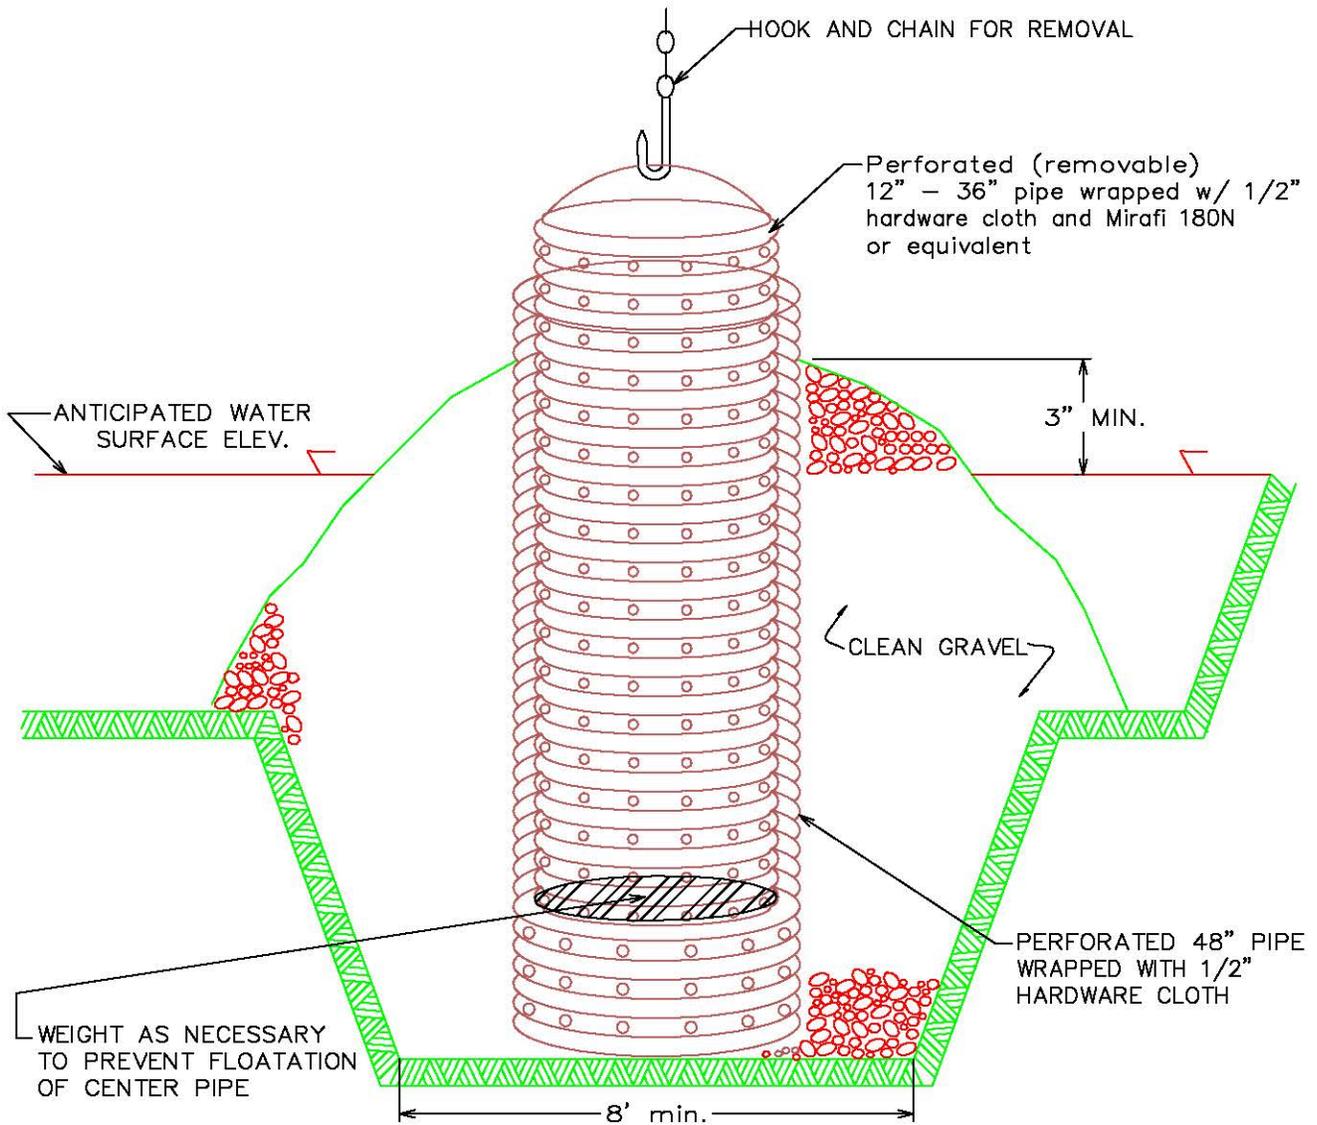

Construction Specifications

1. Pit dimensions are variable, with the minimum diameter being 2 times the standpipe diameter.
2. The standpipe should be constructed by perforating a 12" to 24" diameter corrugated or PVC pipe. Then wrapping with 1/2" hardware cloth and Mirafi 180N. The perforations shall be 1/2" x 6" slits or 1" diameter holes.
3. A base of filter material consisting of clean gravel or 2" stone should be placed in the pit to a depth of 12". After installing the standpipe, the pit surrounding the standpipe should then be backfilled with the same filter material.
4. The standpipe should extend 12" to 18" above the lip of the pit or the riser crest elevation (basin dewatering only) and the filter material should extend 3" minimum above the anticipated standing water elevation.

Figure 6. Sump Pit Detail

Date: April 2008
Scale: Not to Scale

ELEVATION

Construction Specifications

1. The outer pipe should be 48" dia. or shall, in any case, be at least 4" greater in diameter than the center pipe. The outer pipe shall be wrapped with 1/2" hardware cloth to prevent backfill material from entering the perforations.
2. After installing the outer pipe, backfill around outer pipe with 2" aggregate or clean gravel.
3. The inside stand pipe (center pipe) should be constructed by perforating a corrugated or PVC pipe between 12" and 36" in diameter. The perforations shall be 1/2" X 6" slits or 1" diameter holes 6" on center. The center pipe shall be wrapped with 1/2" hardware cloth first, then wrapped again with Mirafi 180N.
4. The center pipe should extend 12" to 18" above the anticipated water surface elevation or riser crest elevation when dewatering a basin.

Figure 7. Removable Pumping Station Detail

Date: April 2008
Scale: Not to Scale

Where the sewer line crosses Brush Creek, a trench box will be used to minimize the width of the trench to 20 feet and hence the area of disturbance to the streambed. Best Management Practices will be utilized to minimize siltation into Brush Creek, including the use of silt fencing, straw bales, and other procedures outlined in Eagle County's Erosion Control Standards. As illustrated by Figures 4-7, two sediment traps with sump pits or removable pumping stations will be used to filter ground water encountered during the excavation before it is pumped to Brush Creek. Pumps will also be used to convey water from the cofferdam back into Brush Creek downstream of the work area to maintain the stream flow. It is anticipated that work in Brush Creek will be completed between July 15 and September 15, between the two sensitive time periods for rainbow trout (March 15- July 15) and brown trout (September 15 – March 15), thereby reducing potential impacts to spawning fish.

6.4 Impacts to Fish & Wildlife

During the sewer line installation, there will be a temporary impact to the aquatic habitat of Brush Creek, which is a spawning area for brown and rainbow trout. However, as described above, it is anticipated that the work will be completed between July 15 and September 15, thereby avoiding the most sensitive time periods, specifically March 15 – July 15 for rainbow trout and September 15 – March 15 for brown trout. In addition, several mitigation measures will be employed to reduce impacts to fish. First, a trench box will be used to limit the area of the streambed disturbance. Second, there will be no interruption of the stream flow downstream of the work area. A temporary cofferdam will be used to dewater the work area for the sewer line installation, and pumps will be used to convey the water from above the cofferdam back into the creek below the work area. Third, Best Management Practices will be employed to minimize sedimentation into the creek that could negatively impact fish. For example, turbid ground water encountered in the sewer line trench will be filtered through one of two sediment traps with sump pits or removable pumping stations before being pumped into Brush Creek below the work area. Silt fencing, straw bales, and other measures will also be employed to prevent sediment-laden runoff from entering the creek.

7.0 Mitigation

The 2,002 square feet of temporary impacts to herbaceous wetlands will be restored by returning the disturbed area to its original topography with material excavated from the trench, and then replacing the salvaged wetland sod.

During excavation, the upper 12-18 inches of wetland sod and the hydric soils will be salvaged and briefly stockpiled in accordance with the terms of Nationwide Permit No. 12. Subsoil material will then be removed and stockpiled separately. Following pipeline installation, the impacted wetlands will be returned to their original topography by replacing the salvaged subsoil to achieve a grade approximately 12-18 inches below the original topography, then replacing the upper 12-18 inches of salvaged hydric soil and wetland sod to achieve the original topography. If required, a geofabric will be used to stabilize salvaged vegetation on the banks of Brush Creek and reduce the potential for detrimental erosion. If there is poor vegetation establishment from the salvaged materials, the native wetland seed mix of Table 2 will be applied. On the north bank of Brush Creek, sandbar willow cuttings will also be harvested from adjacent populations and planted in the mitigation area.

The substrate excavated from the streambed of Brush Creek will be replaced following pipeline installation and the streambed will be returned to its approximate original topography.

8.0 Monitoring

After the sewer line installation is complete and the salvaged hydric soils and wetland sod have been replaced in the mitigation area, a wetland ecologist will visit the site and prepare a brief letter to the Corps documenting the As-Built Condition. In addition, the site will be monitored during the growing season following installation to document vegetation establishment, and identify any potential problems with hydrology, erosion, weed invasion, or human and wildlife use. The ecologist will determine if there is adequate vegetation establishment from the salvaged plant materials or if a wetland seeding is necessary. A list of the plant species growing in the restoration area will be compiled and photographs will be taken to document the progress of the restoration. The monitoring data will be summarized in a brief Wetland Monitoring Report to be submitted to the U.S. Army Corps of Engineers.

Photo 1. Brush Creek Wetland, view to the east near the location of the proposed sewer line crossing. The north bank has a well developed riparian habitat. (10/29/07).

Photo 2. Reed canarygrass is the dominant herbaceous vegetation along the banks of Brush Creek and on this small island in the channel. (10/19/07).

Photo 3. This depression north of Brush Creek contains a stand of beaked sedge and is supported by a seasonally high ground water table. (10/29/07).

Photo 4. The riparian habitat on the south side of Brush Creek has been replaced with a bluegrass lawn, however hydrophytes still occur along the bank. (10/29/07).

Photo 5. Nebraska sedge, woolly sedge, redtop, and red fescue grow in a narrow band at the edge of the lawn & reed canarygrass is present in the shallow water. (10/29/07).

PURPOSE AND SCOPE OF STUDY

This report presents the results of a subsoil study for the proposed Sylvan Circle Townhomes development to be located at 58 Sylvan Lake Road, Eagle, Colorado. The project site is shown on Figure 1. The purpose of the study was to develop recommendations for the foundation design. The study was conducted in accordance with our proposal for geotechnical engineering services to Creative West Architects dated February 22, 2016.

A field exploration program consisting of exploratory borings was conducted to obtain information on the subsurface conditions. Samples of the subsoils and bedrock obtained during the field exploration were tested in the laboratory to determine their classification, compressibility or swell and other engineering characteristics. The results of the field exploration and laboratory testing were analyzed to develop recommendations for foundation types, depths and allowable pressures for the proposed building foundations. This report summarizes the data obtained during this study and presents our conclusions, design recommendations and other geotechnical engineering considerations based on the proposed construction and the subsurface conditions encountered.

BACKGROUND INFORMATION

Hepworth-Pawlak Geotechnical, Inc. previously conducted a preliminary geotechnical study for the Ewing Parcel which included the subject site and presented our findings in a report dated June 17, 1998, Job No. 197 567. We have been provided a report of geotechnical exploration for a proposed Kum & Go Store on a portion of the subject site prepared by Olsson Associates dated June 26, 2012, Project No. 012-0160. Information from these reports has been reviewed and considered in the preparation of this report.

PROPOSED CONSTRUCTION

The proposed development, shown on Figure 1, will consist of seven multi-family townhome buildings. The buildings will typically be two story wood frame structures over crawlspace or with ground floor slabs-at-grade. Some of the buildings will probably have basement levels with slab-on-grade floors. The lower bench of the site near Brush Creek will be elevated with moderate fill depth. We assume relatively light foundation loadings, typical of the proposed type of construction. Cut depths for the buildings are expected to range from about 3 to 8 feet. There will be asphalt paved access drives and parking.

If building loadings, location or grading plans change significantly from those described above, we should be notified to re-evaluate the recommendations contained in this report.

SITE CONDITIONS

The site consists of an upper, previously graded fill bench near Sylvan Lake Road and Highway 6, and a lower, mostly natural bench near Brush Creek, see Figure 1. There is an older, backfilled foundation in the southern part of the upper bench. There are also several shallow fill piles on the lower bench. The upper and lower benches are relatively flat with slope grades from about 3 to 5% down to the southwest. The intervening slope between the benches is moderately steep on the order of 20 to 30% grade and from about 8 to 12 feet high. Elevation difference across the individual building sites ranges from about 5 to 15 feet, and across the site is about 30 to 35 feet. The lower bench area is about 4 to 6 feet above Brush Creek.

Vegetation consists of grass and weeds with scattered brush and some willows and cattails near Brush Creek. There are scattered boulders and cobbles on the ground surface. There is considerable fill along the north side of the site from recent improvements along Highway 6.

SINKHOLE POTENTIAL

Bedrock of the Pennsylvanian age Eagle Valley Evaporite underlies the site. These rocks are a sequence of gypsiferous shale, fine-grained sandstone and siltstone with some massive beds of gypsum and limestone. There is a possibility that massive gypsum deposits associated with the Eagle Valley Evaporite underlie portions of the property. Dissolution of the gypsum under certain conditions can cause sinkholes to develop and can produce areas of localized subsidence. During previous work in Eagle Ranch, several sinkholes were observed scattered throughout the Brush Creek valley. These sinkholes appear similar to others associated with the Eagle Valley Evaporite in other areas of the Eagle River valley.

Sinkholes were not observed in the immediate area of the subject site. No evidence of cavities was encountered in the subsurface materials; however, the exploratory borings were relatively shallow, for foundation design only. The existing grading on the site could have covered any existing sinkholes which can be further evaluated when the site is stripped of old fill and topsoil during construction. Based on our present knowledge of the subsurface conditions at the site, it cannot be said for certain that sinkholes will not develop. The risk of future ground subsidence at the Sylvan Circle Townhomes development site throughout the service life of the proposed buildings, in our opinion, is low and similar to other nearby sites; however, the owners should be made aware of the potential for sinkhole development. If further investigation of possible cavities in the bedrock below the site is desired, we should be contacted.

FIELD EXPLORATION

The field exploration for the project was conducted on March 9 and 10, 2016. Eight exploratory borings were drilled at the locations shown on Figure 1 to evaluate the subsurface conditions. The boring locations were field staked by the surveyor prior to our field exploration. The borings were advanced with 4-inch diameter continuous flight

augers powered by a truck-mounted CME-45B drill rig. The borings were logged by a representative of Hepworth-Pawlak Geotechnical, Inc.

Samples of the subsoils and bedrock were taken with 1½ inch and 2 inch I.D. spoon samplers. The samplers were driven into the subsoils and bedrock at various depths with blows from a 140-pound hammer falling 30 inches. This test is similar to the standard penetration test described by ASTM Method D-1586. The penetration resistance values are an indication of the relative density or consistency of the subsoils and hardness of the bedrock. Depths at which the samples were taken and the penetration resistance values are shown on the Logs of Exploratory Borings, Figures 2 and 3. The samples were returned to our laboratory for review by the project engineer and testing.

SUBSURFACE CONDITIONS

Graphic logs of the subsurface conditions encountered at the site are shown on Figures 2 and 3. The subsoils at the site were somewhat variable with respect to type, depth and engineering characteristics. The subsoils encountered, below from about 2 to 8 feet of fill and/or organic topsoil, consisted of generally medium dense to dense, silty sandy to very sandy gravel and cobbles with boulders underlain with depth by weathered to hard claystone/siltstone. Boring 5 encountered a 2 feet thick layer of clayey silty sand below the fill and overlying the coarse granular soils, and Boring 7 encountered clayey silty sand at depths between 10 and 16½ feet within the natural coarse granular soils. The clayey silty sand was loose to medium dense and contained some very sandy clay and silt zones. The claystone/siltstone which was encountered only in Borings 4 and 6 through 8 at depths from 9 to 20 feet, was medium hard in the weathered zone becoming less weathered and hard to very hard with depth. The claystone/siltstone is of the Eagle Valley Evaporite. The fill consisted primarily of clayey to silty sand and gravel with cobbles, and some sandy clay and silt with gravel and organics at Boring 4. Drilling in the dense, coarse granular soils with auger equipment was difficult due to the cobbles and boulders and drilling refusal was encountered in the deposit in Borings 1 through 3 and 5.

Laboratory testing performed on samples obtained from the borings included natural moisture content and density, gradation analyses, and Atterberg limits. Results of swell-consolidation testing performed on relatively undisturbed drive samples of the claystone/siltstone, presented on Figure 5, indicate low compressibility under conditions of loading and wetting with no swell potential when wetted under a constant 1,000 psf surcharge. Results of gradation analyses performed on small diameter drive samples (minus ¾ to 1½ inch fraction) of the fill and natural granular subsoils are shown on Figures 6 through 8. The laboratory testing is summarized in Table 1.

Free water was encountered in Borings 4 and 6 through 8 at the time of drilling or when checked 25 or 26 days later at depths from about 2 to 8 feet. No free water was encountered in Borings 1 through 3 and 5 located on the upper bench area. The subsoils were moist to very moist becoming wet near and below the free water level. The claystone/siltstone was moist to generally slightly moist with depth.

FOUNDATION BEARING CONDITIONS

At assumed excavation depths, the subgrade conditions will vary across the site. In general, shallow excavations will be in the existing fill and/or topsoil which are not suitable for support of spread footing foundations. Spread footings bearing on the natural dense, coarse granular soils or on properly placed and compacted structural fill should be suitable for support of buildings with some risk of settlement. The risk of settlement is primarily from variable bearing conditions such as transitioning structural fill to natural coarse granular soils, or where footings are underlain by compressible clayey silty sand soils.

Drilled piers or micro-piles bearing in the hard to very hard claystone/siltstone are suitable foundation alternatives and should provide a relatively low risk of movement. Provided below are recommendations for spread footings. If recommendations for a drilled pier or micro-pile foundation system are desired, we should be contacted.

DESIGN RECOMMENDATIONS

FOUNDATIONS

Considering the subsurface conditions encountered in the exploratory borings and the nature of the proposed construction, we recommend the buildings be founded with spread footings bearing on the natural granular soils and/or properly placed and compacted structural fill with some risk of settlement. Suitable structural fill materials include road base, single pass (minus 6 inch size) "pit-run" sand and gravel or similar materials such as the on-site coarse granular soils. Some of the existing fill on the site may also be feasible for us as structural fill provided debris, topsoil and oversized rocks are removed.

The design and construction criteria presented below should be observed for a spread footing foundation system.

- 1) Footings placed on the undisturbed natural granular soils or compacted structural fill should be designed for an allowable bearing pressure of 2,000 psf. Based on experience, we expect settlement of footings designed and constructed as discussed in this section will be up to about 1 to 1½ inches.
- 2) The footings should have a minimum width of 18 inches for continuous walls and 2 feet for isolated pads.
- 3) Exterior footings and footings beneath unheated areas should be provided with adequate soil cover above their bearing elevation for frost protection. Placement of foundations at least 48 inches below exterior grade is typically used in this area.
- 4) Continuous foundation walls should be heavily reinforced top and bottom to span local anomalies such as by assuming an unsupported length of at least 14 feet. Foundation walls acting as retaining structures should also be designed to resist lateral earth pressures as discussed in the "Foundation and Retaining Walls" section of this report.

- 5) All existing fill, debris, topsoil, fine grained soils and any loose disturbed soils should be removed and the footing bearing level extended down to the natural coarse granular soils. Structural fill placed on the natural coarse granular soils below footings areas should be compacted to at least 98% standard Proctor density at a moisture content within about 2% of optimum. Prior to the footing construction or fill placement, the exposed soils should be adjusted to near optimum moisture content and compacted. If water seepage is encountered, the excavation should be dewatered. The subgrade in areas may need to be stabilized such as by subexcavation and replacement with coarse granular soils.
- 6) A representative of the geotechnical engineer should observe all footing excavations and test structural fill compaction prior to concrete placement to evaluate bearing conditions.

FOUNDATION AND RETAINING WALLS

Foundation walls and retaining structures which are laterally supported and can be expected to undergo only a slight amount of deflection should be designed for a lateral earth pressure computed on the basis of an equivalent fluid unit weight of at least 55 pcf for backfill consisting of the on-site predominantly granular soils. Cantilevered retaining structures and site retaining walls which are separate from the buildings and can be expected to deflect sufficiently to mobilize the full active earth pressure condition should be designed for a lateral earth pressure computed on the basis of an equivalent fluid unit weight of at least 45 pcf for backfill consisting of the on-site predominantly granular soils. The backfill should not contain debris, topsoil or oversized (plus 6 inch) rocks.

All foundation and retaining structures should be designed for appropriate hydrostatic and surcharge pressures such as adjacent footings, traffic, construction materials and equipment. The pressures recommended above assume drained conditions behind the walls and a horizontal backfill surface. The buildup of water behind a wall or an upward sloping backfill surface will increase the lateral pressure imposed on a foundation wall or

retaining structure. An underdrain should be provided to prevent hydrostatic pressure buildup behind walls.

Backfill should be placed in uniform lifts and compacted to at least 90% of the maximum standard Proctor density at a moisture content near optimum. Backfill placed in pavement and walkway areas should be compacted to at least 95% of the maximum standard Proctor density. Care should be taken not to overcompact the backfill or use large equipment near the wall, since this could cause excessive lateral pressure on the wall. Some settlement of deep foundation wall backfill should be expected, even if the material is placed correctly, and could result in distress to facilities constructed on the backfill. Use of a select granular material such as road base and increasing compaction to 98% standard Proctor density could be done to reduce backfill settlements.

The lateral resistance of foundation or retaining wall footings will be a combination of the sliding resistance of the footing on the foundation materials and passive earth pressure against the side of the footing. Resistance to sliding at the bottoms of the footings can be calculated based on a coefficient of friction of 0.45. Passive pressure of compacted backfill against the sides of the footings can be calculated using an equivalent fluid unit weight of 350 pcf for moist condition and 225 pcf for buoyant condition. The coefficient of friction and passive pressure values recommended above assume ultimate soil strength. Suitable factors of safety should be included in the design to limit the strain which will occur at the ultimate strength, particularly in the case of passive resistance. Fill placed against the sides of the footings to resist lateral loads should be a granular material compacted to at least 95% of the maximum standard Proctor density at a moisture content near optimum.

FLOOR SLABS

The natural on-site soils, exclusive of topsoil, are suitable to support lightly loaded slab-on-grade construction. Existing fill, debris and topsoil will need to be removed below slab areas and replaced with structural fill to provide a low risk of slab movement and

distress. The structural fill below slab areas can consist of the on-site granular soils or a suitable imported material such as road base or single pass (minus 6 inch) "pit-run".

To reduce the effects of some differential movement, floor slabs should be separated from all bearing walls and columns with expansion joints which allow unrestrained vertical movement. Floor slab control joints should be used to reduce damage due to shrinkage cracking. The requirements for joint spacing and slab reinforcement should be established by the designer based on experience and the intended slab use. A minimum 4 inch layer of free-draining gravel should be placed beneath slabs to facilitate drainage. This material should consist of minus 2 inch aggregate with at least 50% retained on the No. 4 sieve and less than 2% passing the No. 200 sieve.

All fill materials for support of floor slabs should be compacted to at least 95% of maximum standard Proctor density at a moisture content near optimum. Required fill should consist of suitable granular soils devoid of debris, topsoil and oversized rocks.

UNDERDRAIN SYSTEM

Free water was encountered in most of the borings at the site and may be encountered in excavations, especially those located on the lower bench. Also, it has been our experience in the area that local perched groundwater can develop during times of heavy precipitation or seasonal runoff. Frozen ground during spring runoff can also create a perched condition. Therefore, we recommend below-grade construction, such as retaining walls, crawlspace and basement areas, be protected from wetting and hydrostatic pressure buildup by an underdrain system.

The drains should consist of drainpipe placed in the bottom of the wall backfill surrounded above the invert level with free-draining granular material. The drain should be placed at each level of excavation and at least 1 foot below lowest adjacent finish grade and sloped at a minimum 1% to a suitable gravity outlet above the flood level of Brush Creek or a sump where the water can be collected and pumped. If rigid PVC drain

pipe is used, the minimum slope can be reduced to ½%. For the lower bench area, building interior lateral drains on about 20 to 30 feet spacing may also be needed. Free-draining granular material used in the underdrain system should contain less than 2% passing the No. 200 sieve, less than 50% passing the No. 4 sieve and have a maximum size of 2 inches. The drain gravel backfill should be at least 1½ feet deep, extend to above any seepage in the adjacent cut face, and be covered by filter fabric such as Mirafi 140N or 160N.

SITE GRADING

All structural fill at the site should be properly placed and compacted. Existing fill and topsoil below movement sensitive facilities such as sidewalks, driveways and parking areas should also be removed and can be further evaluated at the time of construction. After unsuitable soils are removed, the exposed surface should be evaluated for presence of old sinkholes such as proofrolling with a heavily loaded truck. Stabilization of soft subgrade areas could be needed prior to fill placement and/or construction of other facilities.

Fills should be limited to about 8 to 10 feet deep, especially where underlain by potentially compressible soils. Embankment fills should be compacted to at least 95% of the maximum standard Proctor density near optimum moisture content. Prior to fill placement, the subgrade should be carefully prepared by removing all vegetation and topsoil and compacting to at least 95% of the maximum standard Proctor density. The fill should be benched into the portions of the site exceeding 20% grade.

Permanent unretained cut and fill slopes should be graded at 2 horizontal to 1 vertical or flatter and protected against erosion by revegetation or other means. The risk of slope instability will be increased if seepage is encountered in cuts and flatter slopes may be necessary. If seepage is encountered in permanent cuts, an investigation should be conducted to determine if the seepage will adversely affect the cut stability. Boulder

walls should be feasible for retaining relatively low cuts and fills at the site with proper design and construction.

SURFACE DRAINAGE

Positive surface drainage is an important aspect of the project. The following drainage precautions should be observed during construction and maintained at all times after the buildings have been completed:

- 1) Inundation of the foundation excavations and underslab areas should be avoided during construction.
- 2) Exterior backfill should be adjusted to near optimum moisture and compacted to at least 95% of the maximum standard Proctor density in pavement and slab areas and to at least 90% of the maximum standard Proctor density in landscape areas.
- 3) The ground surface surrounding the exterior of the buildings should be sloped to drain away from the foundation in all directions. We recommend a minimum slope of 12 inches in the first 10 feet in unpaved areas and a minimum slope of 2½ inches in the first 10 feet in paved areas. Free-draining wall backfill should be capped with filter fabric and about 2 feet of the on-site finer graded soils to reduce surface water infiltration.
- 4) Roof downspouts and drains should discharge well beyond the limits of all backfill.
- 5) Landscaping which requires regular heavy irrigation should be located at least 5 feet from foundation walls.

PAVEMENT SECTION THICKNESS

We understand asphalt pavement is proposed for access drive and parking areas. Internal traffic for the development when built out has been provided as about 300 vehicles per day not including construction traffic. We understand that due to the proposed staged building construction, the pavement areas will likely be subjected to construction traffic.

We estimate an 18 kip equivalent daily load application (EDLA) of about 15 to 20 for the residential development traffic including assumed construction traffic. The project civil engineer should check our assumed traffic loading.

The subgrade soils are assumed to consist of low to non-plastic, primarily granular soils but may vary across the site. AASHTO Classifications on the samples tested, range from A-5 to A-2-4 which range from poor to fair support for pavement sections. We assume a Hveem stabilometer 'R' value of about 10 for the subgrade soils. The fine grained soils are probably susceptible to frost heave.

Based on our experience and CDOT design procedures using an 18 kip EDLA of about 20 (including construction traffic), a Regional Factor of 2.25 and a serviceability index of 2.0, we recommend the minimum pavement section thickness for the driveway/access road consist of 4 inches of asphalt on 10 inches of base course or 5 inches of asphalt on 6 inches of base course. For automobile only parking areas, we recommend the minimum pavement section thickness consist of 3 inches of asphalt on 8 inches of base course or 4 inches of asphalt on 4 inches of base course. For areas subjected to regular truck traffic, and tight turning areas, a concrete pavement section consisting of at least 6 inches of Portland cement concrete on 4 inches of base course should be considered.

The asphalt should be a batched hot mix, approved by the engineer and placed and compacted to a density of 92% to 96% of the maximum theoretical density. The base course should meet CDOT Class 6 specifications. All base course and required subgrade fill should be compacted to at least 95% of the maximum standard Proctor density at a moisture content within 2% of optimum. Concrete should have a design compressive strength of 4,500 psi and be air entrained.

Required fill to establish design subgrade level can consist of the on-site granular soils, excluding debris, topsoil and oversized (plus 6-inch) rocks or similar import material. Prior to fill placement the subgrade should be stripped of unsuitable soils then scarified to a depth of 8 inches, adjusted to near optimum moisture and compacted to at least 95% of

standard Proctor density. In soft or wet areas, the subgrade may require drying or stabilization prior to fill placement. A geogrid such as Tensar TX-140 and/or subexcavation and replacement with aggregate base soils may be needed for the stabilization. The subgrade should be proofrolled. Areas that deflect excessively should be corrected before placing pavement materials. The subgrade improvements and placement and compaction of base and asphalt materials should be monitored on a regular basis by a representative of the geotechnical engineer.

The collection and diversion of surface water away from paved areas is extremely important to the satisfactory performance of the pavement. Drainage design should provide for the removal of water from the paved areas and prevent wetting of the subgrade soils.

LIMITATIONS

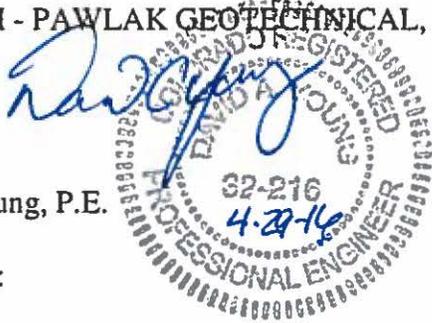

This study has been conducted in accordance with generally accepted geotechnical engineering principles and practices in this area at this time. We make no warranty either express or implied. The conclusions and recommendations submitted in this report are based upon the data obtained from the exploratory borings drilled at the locations indicated on Figure 1, the proposed type of construction and our experience in the area. Our services do not include determining the presence, prevention or possibility of mold or other biological contaminants (MOBC) developing in the future. If the client is concerned about MOBC, then a professional in this special field of practice should be consulted. Our findings include interpolation and extrapolation of the subsurface conditions identified at the exploratory borings and variations in the subsurface conditions may not become evident until excavation is performed. If conditions encountered during construction appear different from those described in this report, we should be notified so that re-evaluation of the recommendations may be made.

This report has been prepared for the exclusive use by our client for design purposes. We are not responsible for technical interpretations by others of our information. As the

project evolves, we should provide continued consultation and field services during construction to review and monitor the implementation of our recommendations, and to verify that the recommendations have been appropriately interpreted. Significant design changes may require additional analysis or modifications to the recommendations presented herein. We recommend on-site observation of excavations and foundation bearing strata and testing of structural fill by a representative of the geotechnical engineer.

Respectfully Submitted,

Drive sample; standard penetration test (SPT), 1 3/8 inch I.D. split spoon sample, ASTM D-1586.

39/12

Drive sample blow count; indicates that 39 blows of a 140 pound hammer falling 30 inches were required to drive the California or SPT sampler 12 inches.

0,26

Free water level in boring and number of days following drilling measurement was taken.

Depth at which boring had caved when measured on April 4, 2016.

Practical drilling refusal. Where shown above bottom of log, indicates that multiple attempts were made to advance the boring.

NOTES:

1. Exploratory borings were drilled on March 9 and 10, 2016 with 4-inch diameter continuous flight power auger.
2. Locations of exploratory borings were field staked by Archibeque Land Consultants.
3. Elevations of exploratory borings were obtained by interpolation between contours shown on the site plan provided.
4. The exploratory boring locations and elevations should be considered accurate only to the degree implied by the method used.
5. The lines between materials shown on the exploratory boring logs represent the approximate boundaries between material types and transitions may be gradual.
6. Water level readings shown on the logs were made at the time and under the conditions indicated. No free water encountered in Borings 1 through 3 and 5. Boring 7 was lost and could not be checked on April 4, 2016. Borings 2 and 5 were backfilled after drilling. Fluctuations in water level may occur with time.

CERTIFICATE OF RECOMMENDATION

TO: Planning & Zoning Commission

FROM: Department of Community Development

DATE: June 21, 2016

PROJECT NAME: Aguilar Side Yard Setback Variance

FILE NUMBER: V16-03

APPLICANT: Mauro Aguilar

LOCATION: 20 Wren Court

APPLICABLE SECTION(S) OF MUNICIPAL CODE:
Section 4.05.02 (Variance Standards)

EXHIBIT(S):

- A. Application Letter
- B. Aerial Photos of Site
- C. Photos

PUBLIC COMMENT: None Received as of June 10, 2016

STAFF CONTACT: Tom Boni, Town Planner

REQUEST: Variance to allow covered deck in side yard.

DISCUSSION:

The applicant has an approved building permit to construct a deck in the side yard of the subject property. However, plans did not include a roof. After constructing the deck the building official noticed the construction of the support for a roof and issued a Stop Work Order. After meeting with staff, the owner presented photos of other homes in the Orchard that had constructed similar roofed decks. While all of the examples were not relevant to this situation at least two were similar situations.

Subsequent to issuing the stop work order, the Town has received several complaints regarding the unfinished construction and effect it was having on the appearance of the neighborhood and the ability to sell surrounding homes. Most if not all of the neighbors were in support of allowing this roofed deck to be completed. Due to several problems including the applicant moving out of State, this unfinished condition has persisted for approximately three years.

ZONING VARIANCE STANDARDS

Listed below are the findings required by Section 4.05.020 of the Land Use & Development Code for approval of a Zoning Variance:

1. That the variance granted is without substantial detriment to the public good and does not impair the intent and purposes of the Town's regulations, goals, policies and plans, including the specific regulation in question; and
2. That the variance granted is the minimum necessary to alleviate the hardship; and
3. That there exists on the property in question exceptional topography, shape, size or other extraordinary and exceptional situation or condition peculiar to the site, existing buildings, or lot configuration such that strict application of the zone district requirements from which the variance is requested would result in peculiar and exceptional practical difficulties to or exceptional and undue hardship upon the owner of the property in question; or
4. That such exceptional situation or condition was not induced by any action of the applicant and is not a general condition throughout the zone district.

FINDINGS FOR A ZONING VARIANCE

1. Based on the existence of several other similar covered decks in this subdivision and the narrowness of the lot, staff believes that this variance can be granted without substantial detriment to the public good and does not impair the intent and purposes of the Town's regulations, goals, policies and plans, including the specific regulation in question.
2. The proposed deck is 10 feet wide which is a reasonable but not wide deck structure and staff believes that a finding can be made that it is the minimum necessary.
3. This property is a narrow lot and the extension of a covered deck living space on the northwest side of the lot is a reasonable request and that the prohibition of this roof over the deck would be an undue hardship on the owner.

STAFF RECOMMENDATION

Staff recommends approval of file number V16-03, variance from the required setback of 12.5 feet from side property line based on compliance with standards 1, 2 and 3 as referenced earlier in this staff report conditional upon:

1. Applicant submit a landscape plan to be approved by the Town Planner showing additional landscaping in the surrounding area to buffer the deck.

From

Mauro and Cynthia Aguilar
20 Wren court, Lot No. 42
Eagle, Colorado 81631

To

Eagle county Community Development Department
Variance Request Letter and Justification

Summary of Proposed Modifications

This Letter is a request for a zoning variance. The existing deck we have contracted to be built has the following dimensions: 28.7 feet long by 10.4 feet wide from the side property line. The existing lot is zoned as Residential Medium and currently requires 12.5 feet setback.

The covered deck will be 12 feet maximum height with a 2 feet decline by the property line. It is an ordinary design with wood joists and posts, aluminum roof framing. It is to be built on top of an existing approved deck that will only require an additional approximate 10.4 feet to be added in an effort to cover the entire deck existing structure.

Justification of Variance

The variance being requested is to reduce the setback from 12.5 Feet to 6.2 approximately. The ultimate goal is to finish the existing planned structure in an effort to provide an aesthetically uniform and consistent covered deck without sacrificing the integrity of the neighborhood design that are fortunate to have the required setback. The variance requested herewith in would not be detrimental to the public good nor is in conflict with intended purpose of the zoning ordinance. Furthermore, this variance will allow the deck structure to blend in correlation with height of the existing home.

It is imperative that you are aware that lots on wren court address # 53 and # 123 and # 270 Tanager circle have constructed similar covered decks and they blend in with neighborhood as the project that I am respectfully proposing.

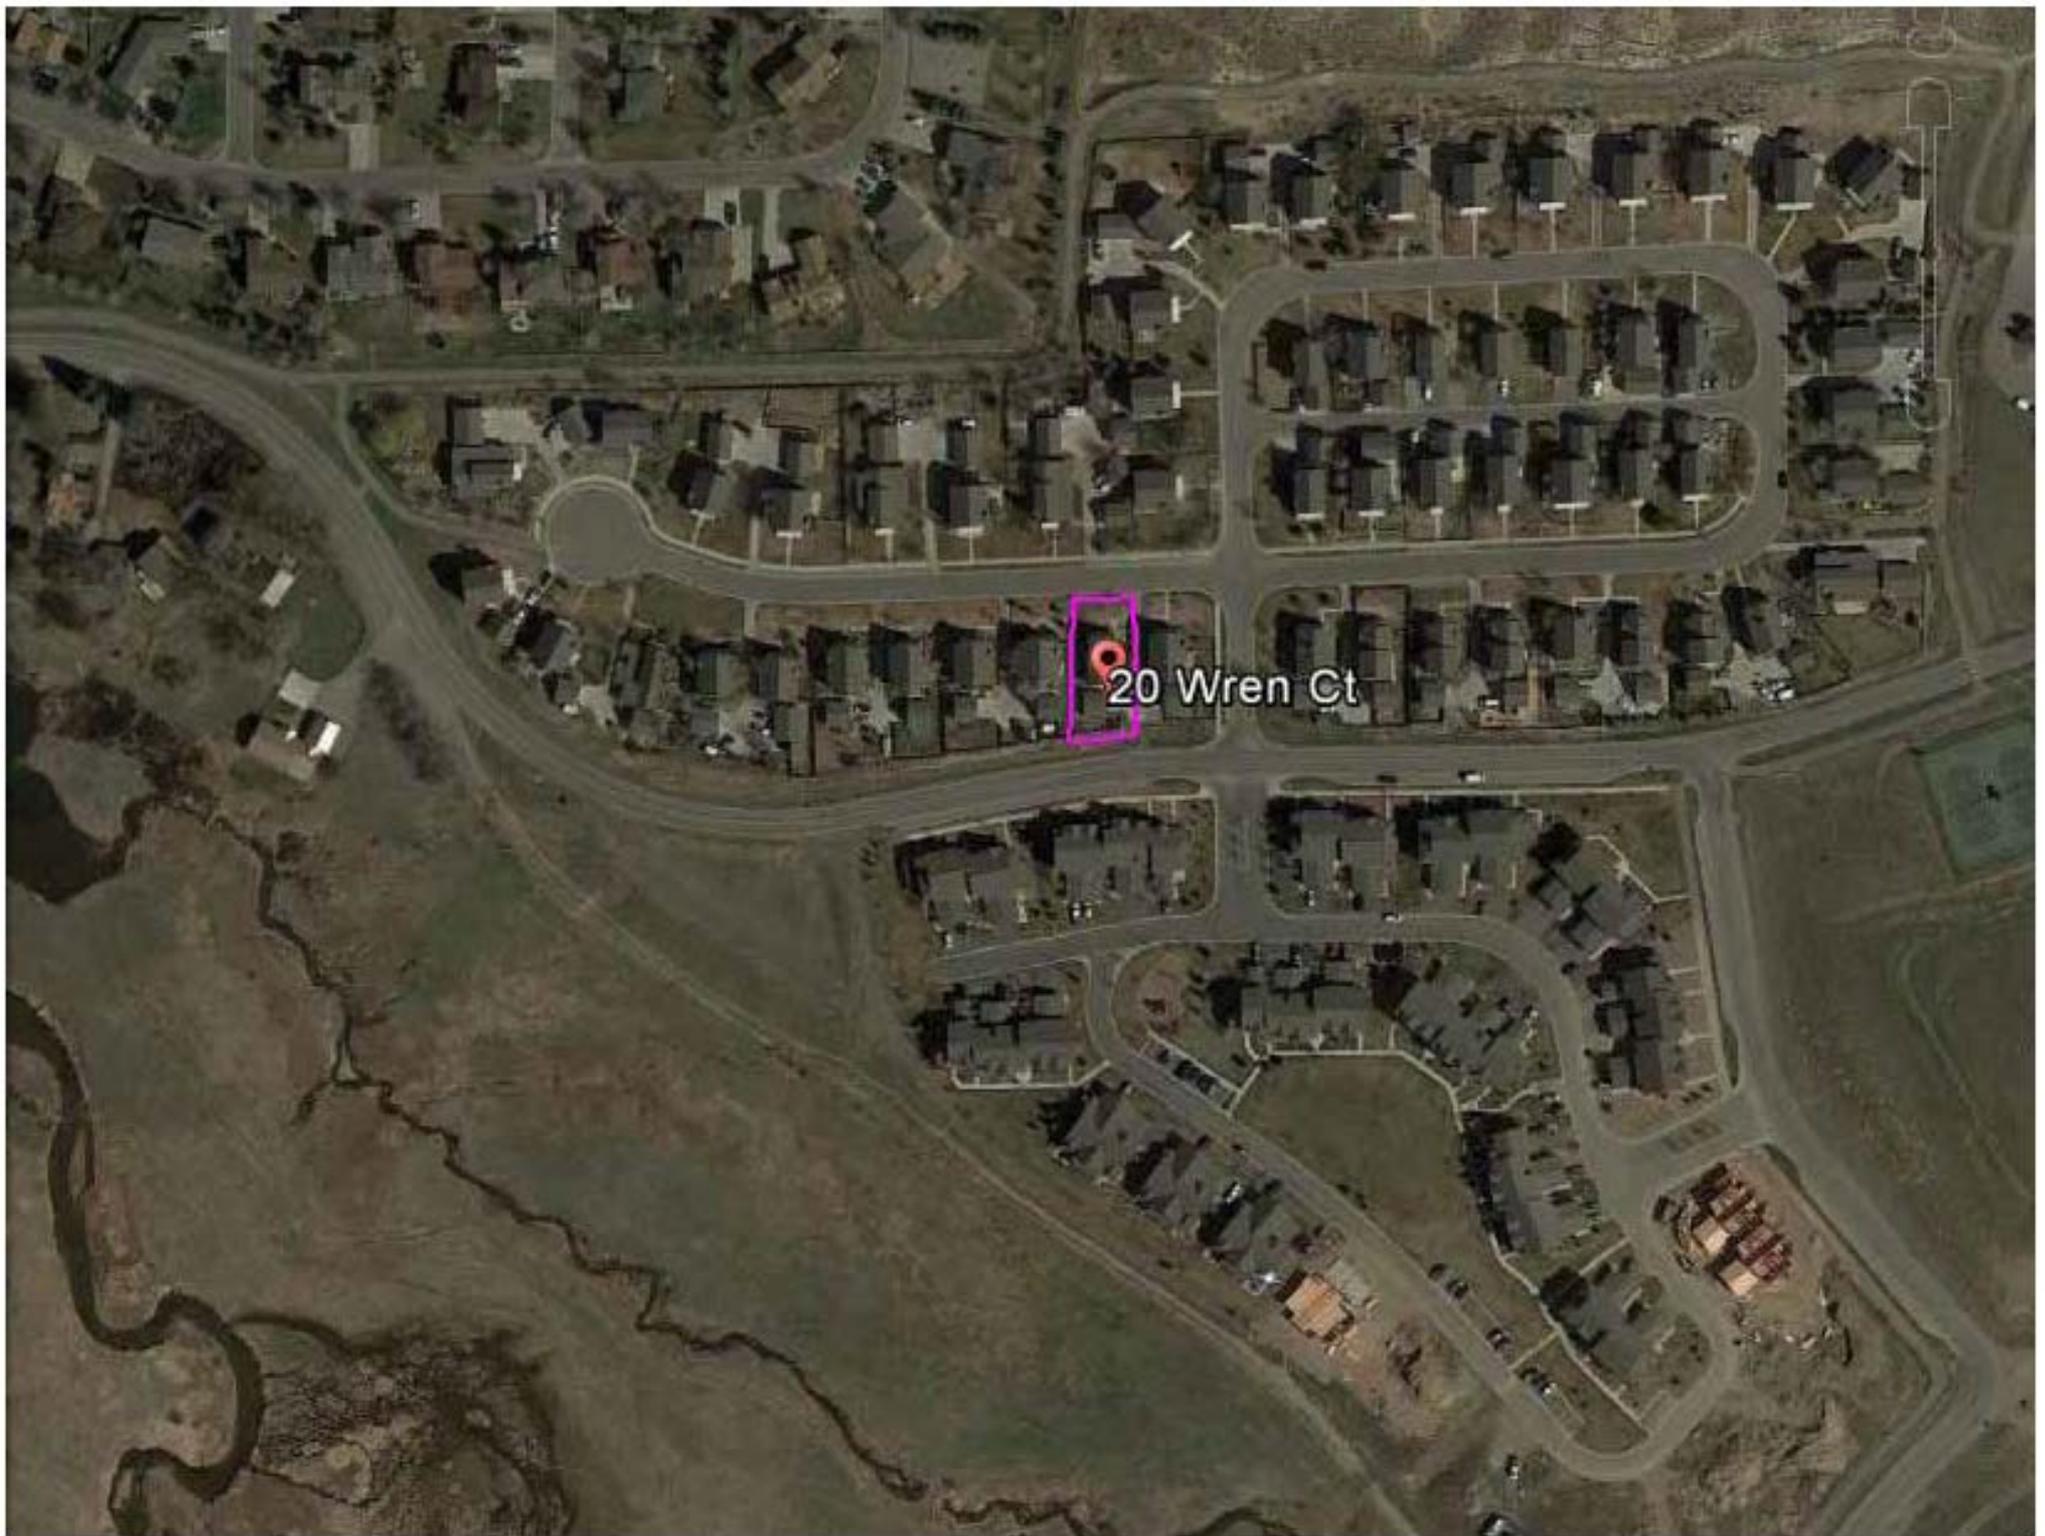

This covered deck will add value to the property while having no negative impact on the neighborhood. The proposed covered deck will also be covered by trees in front and the back of the property for ultimate privacy.

Conditions Peculiar to this property

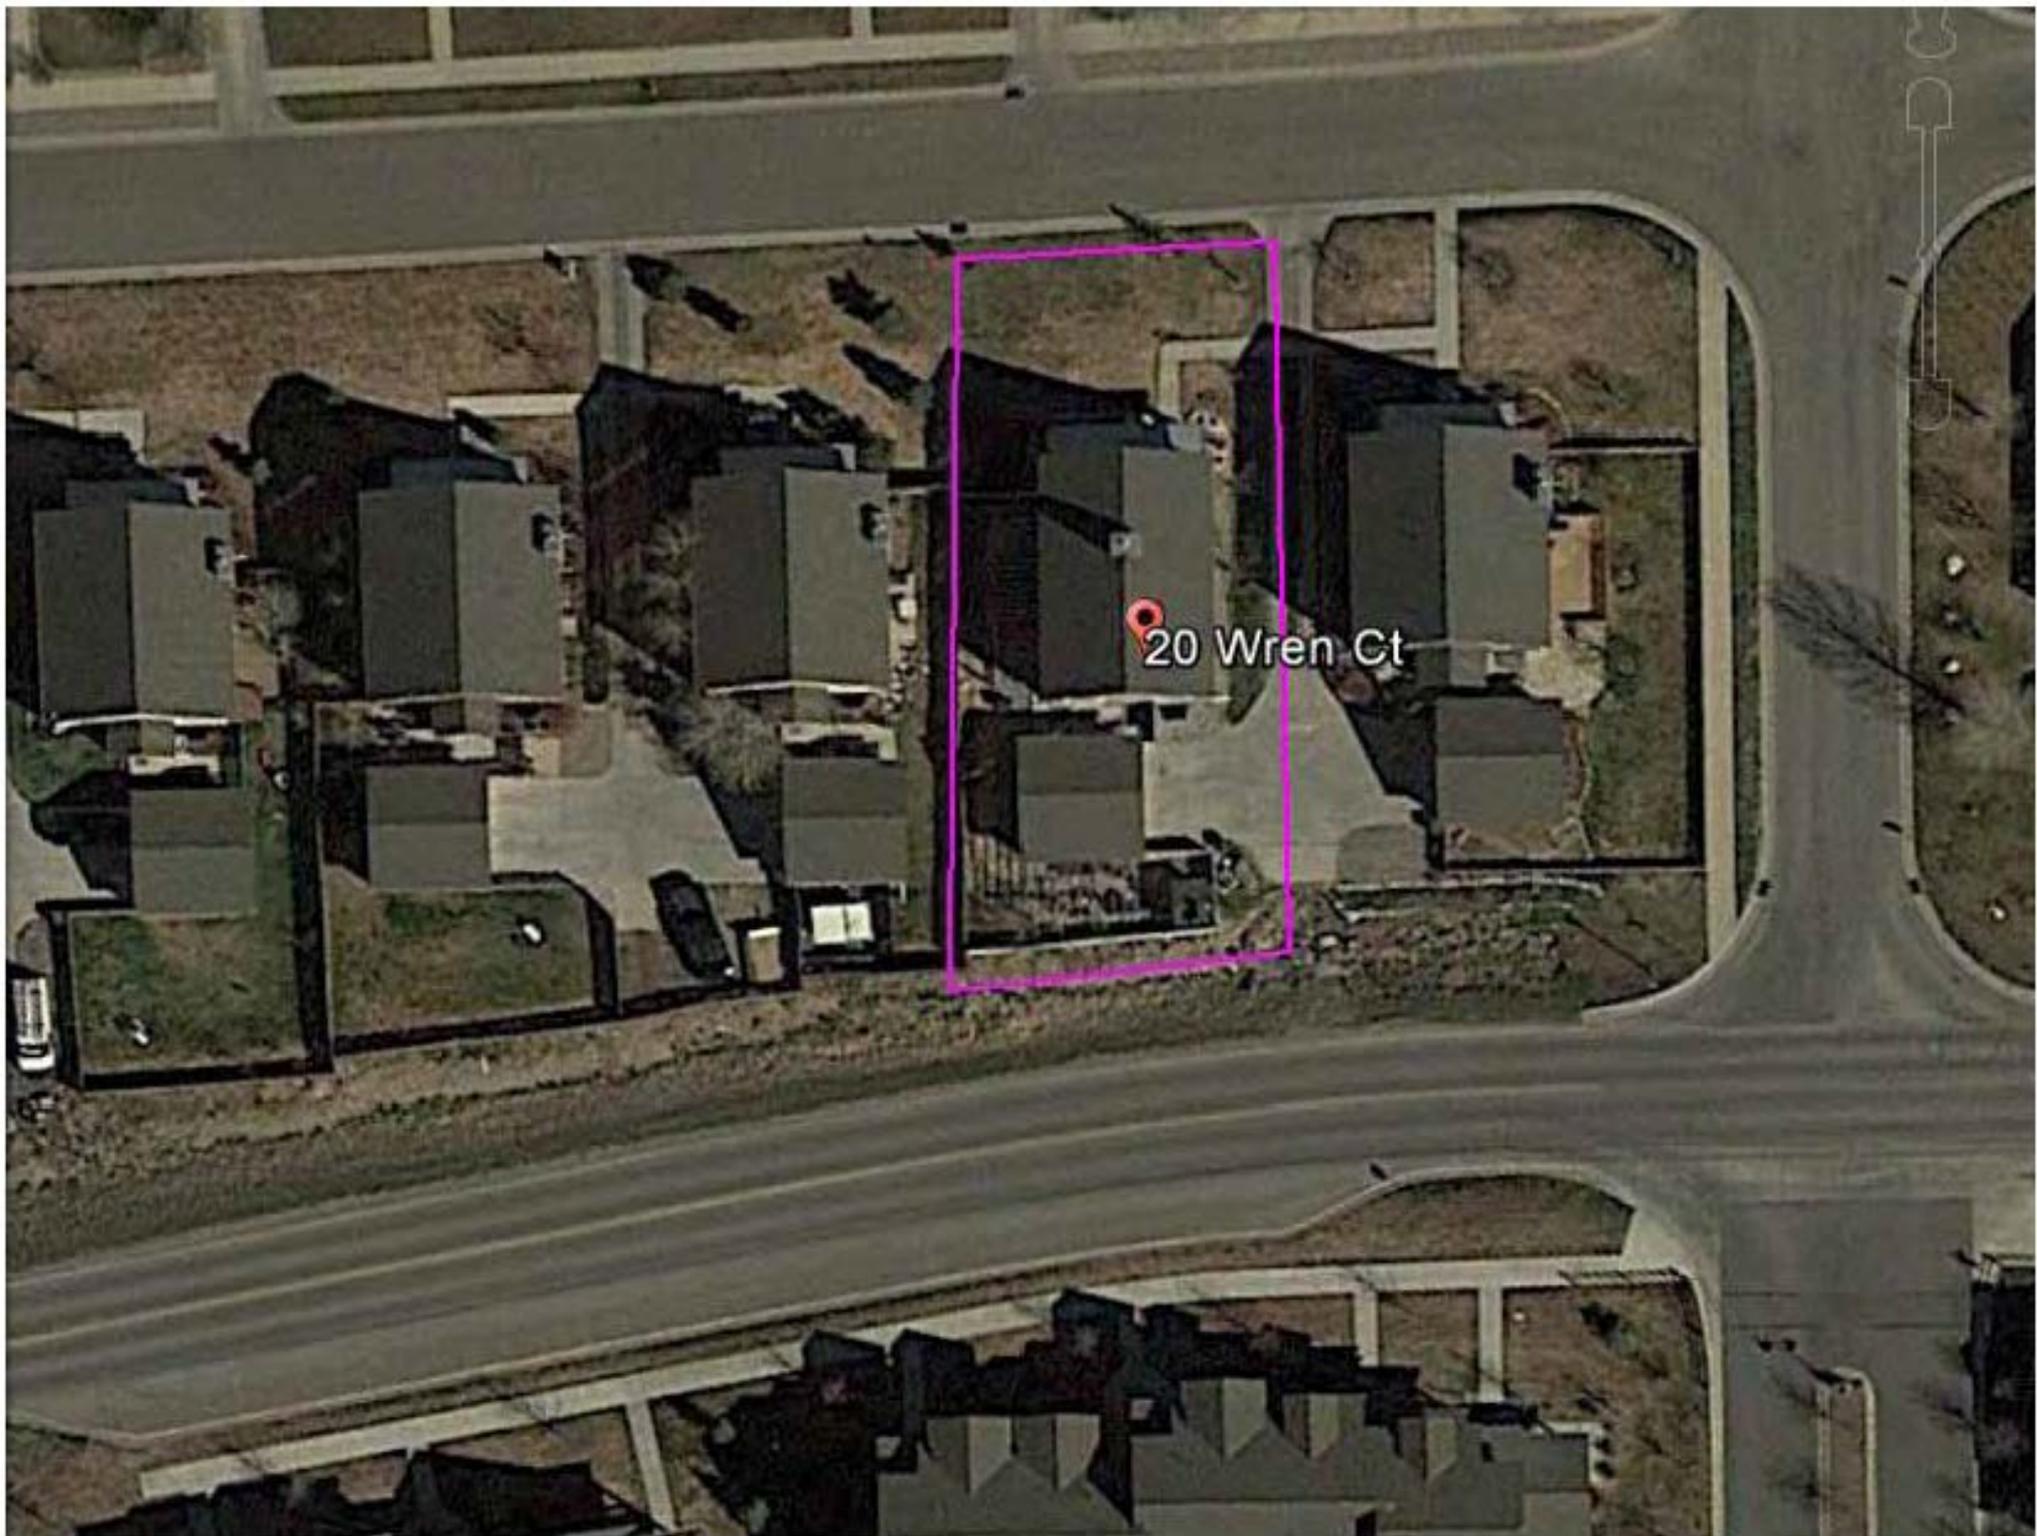

We are blessed to have very narrow lot. The zoning ordinance requiring a 12.5 feet side setback is unique to this lot since is one of the narrowest lot in the neighborhood. The surrounding properties have structures larger in size and are not affected by the setback regulation.

Hardship created

Currently we are faced with snow and ice accumulation on our deck creating due to the lack of direct sun exposure over our deck, therefore creating a potential risk anyone walking thru the deck when accessing from the garage on the west side of the property.
