Lower Basin Water Treatment Plant Public Open House

Scheduled for Thursday, Jan. 18 5:30-7:00 PM, Brush Creek Pavilion

Eagle, CO – The Town of Eagle invites the community to join the Lower Basin Water Treatment Plant (LBWTP) project team to learn more about the Town’s water infrastructure system and plans for the new water plant. Come see what changes are coming to water accounts in 2018 and what’s next in the new Lower Basin Water Treatment Plant project. Learn more about the SGM Water Rate Study, Water Efficiency Study and the need for the new water plant in Eagle.

“We encourage the community to join us for a casual open house with the opportunity to ask direct questions about proposed rates, conservation and treatment plant plan.” said acting Town Manager, Tom Boni. “We’ll be presenting comprehensive summaries on all LBWTP work to date. This information affects all water account holders and we want to be transparent and help provide opportunities to participate and get informed.”

Open House Format

There will be a brief introduction into an open format with visuals, review of studies covering information on: water account rate fee increases/monthly surcharge, tap fee increases (on new development), variable EQR, water efficiency and conservation, and the LBWTP construction costs and phasing. This casual Public Open House will provide time for active listening, open comments, questions and discussions about the Town’s plan. Refreshments will be provided.

Public Meeting Schedule for January 2018 LBWTP:

Jan.9, 2018 – Board of Trustees – Eagle Town Hall
Jan. 18, 2018 – Public Open House – Brush Creek Pavilion
Jan.23, 2018 – Board of Trustees – Eagle Town Hall

About the Lower Basin Water Treatment Plant

The Town of Eagle is moving forward with plans to construct a second water treatment facility located east of the existing wastewater treatment plant at the confluence of Brush Creek and the Eagle River. Investing in water infrastructure includes capital improvement costs, plant operations, the cost of distribution of water and planning for future water needs.

The proposed plant has been in consideration since 2007, with an initial plant design completed in 2012. The time is right for a new plant with Brush Creek water rights being exhausted, the current water demand, anticipated need for redundancy in the system and to support Eagle’s future. The new treatment plant will serve the Town for 20 years and beyond. The plant is designed to allow for future expansion if needed.

For more information regarding the Lower Water Basin Treatment Plant, like the Town of Eagle on Facebook, sign up for Eagle Today, or visit townofeagle.org/waterplant.
